

An Investigation Into The Impact Of Biofuel Production On The Sugar Industry:

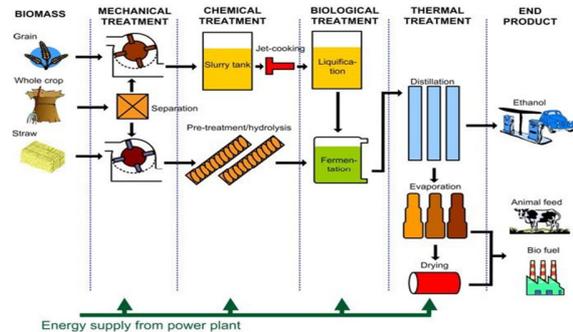

Abstract— This paper is aimed to evaluate the impact of the biofuel industry as a rapidly growing industry on the sugar and sugar based food industry and compare it's affect between the UK and Pakistan. These impacts will be looked at in term of evaluating the feed stock and analyzing the negative impacts of the biofuel industry on the sugar industry. Positive and negative effects of the biofuel industry on the UK and Pakistan sugar industry will be overlooked and compared along with methods and measures that can be taken for the reduction of the negative impact on these markets.

An economic model is used in order to evaluate the shift from sugar to bio-ethanol products in UK and Pakistan, its possibility, quality and quantity changes, and the comparison of the earlier mentioned and possible methods for reducing any negative effect on the sugar industry.

CONCLUSIONS

Biofuel industry is the next generation in producing alternative energy and raising the economics of countries. In this article we analyzed the impact of biofuel industry to UK and Pakistan sugar industry and economics and we came to the conclusion that it may impact both countries economics in a good way. UK has already started producing biofuel and earned a lot of money doing that along with giving jobs of its citizens. Pakistan as an agricultural country can be very successful in the biofuel business as they have a lot of hectares of land and are experienced in the agricultural business.

A Comparative Case Study Of UK And Pakistan
