BACKGROUND: Heat shock protein 27 kDa (Hsp27) is a chaperone of the sHsp (small heat shock protein). The common functions of sHsps are chaperone activity, inhibition of apoptosis, regulation of cell development, and cell differentiation, take part in signal transduction.

Objective: To study the intracellular localization of phosphorylated features and non-phosphorylated forms of Hsp27 in primary breast cancer cells and to evaluate their relationship with regional lymphatic metastasis. **Material and Methods:** Tumor biopsies of breast tissue were collected from 100 patients with a confirmed diagnosis of invasive carcinoma, nonspecific type, between the ages of 31-80 years. Immunohistochemistry was used to determine the intracellular localization of phosphorylated and non-phosphorylated forms of Hsp27. **Results:** The result of this study showed that biopsies from patients with lymph node metastasis exhibited significantly higher levels of phosphorylated forms of Hsp27 in the nucleus and cytoplasm compared with the group without lymph node metastasis. **Analysis** showed that the expression of phosphorylated forms of the chaperone Hsp27 correlates with the amount and percentage of lymph node metastases affected. **Conclusion:** The nuclear expression of phosphorylated and non-phosphorylated forms of the chaperone Hsp27 is a marker of tumor cells associated with lymphatic metastasis of breast cancer.

The study was conducted with financial support from the Council for Grants of the President of the Russian Federation for the state support of young philosophy doctors, agreements of SC №14.120.14.168-MD

Keywords: Hsp27, breast cancer, lymph node metastases, prognostic markers, immunohistochemistry

Biography

2008 has completed her PhD at the age of 27 years from Siberian State Medical University and postdoctoral studies from Siberian State Medical University.

Evgeniya Kaigorodova - PhD, MD physician of clinical laboratory diagnostics of the highest category, Leading researcher, Department of Pathological Anatomy and Cytology, Tomsk Cancer Research Institute (2012-present); Leading researcher Laboratory of Translational Cell and Molecular Biomedicine, Tomsk State University (2014-present); Professor of the Department of Biochemistry and molecular biology of the Siberian State Medical University (2014-present). She has published more than 50 papers in reputed journals.
