

Abstract (600 word limits)

Fever is not symptom of any disease. None of diseases require fever as its symptom.

K. M. Yacob (Chief Physician).
Marma Health Centre, Kochi, Kerala, India

Symptom Definition is the only parameters necessary for a Symptom. As any or all other definitions, symptom definition should be describing the symptom scientifically. If it cannot describe clearly, there is no use of a symptom definition. A symptom is a departure from normal function or feeling which is noticed only by a patient, indicating the presence of disease or abnormality.

One cannot be understood directly the temperature is elevated in hypothalamus. A mechanical device is necessary to measure elevated temperature in hypothalamus. In symptom definition, fever definition can't be found. The elevation of body temperature is not included in symptom definition. The main evidence which proves that fever is not a symptom of disease is symptom definition itself. Elevated temperature or increased temperature never makes fever or symptoms of fever. It may create hyperthermia.

Biography (200 word limit)

A practicing physician in the field of healthcare in the state of Kerala in India for the last 30 years and very much interested in basic research. My interest is spread across the fever, inflammation and back pain. I am a writer. I already printed and published nine books in these subjects. I wrote hundreds of articles in various magazines. After scientific studies we have developed 8000 affirmative cross checking questions. It can explain all queries related with fever.

After scientific studies we have developed 8000 affirmative cross checking questions. It can explain all queries related with fever.
