A webinar is an online seminar that turns a presentation into a real-time conversation from anywhere in the world. Webinars allow large groups of participants to engage in online discussions or training events and share audio, documents or slides – even when they're not in the same place as the meeting host or in the same room where the event or presentation is taking place.

Genomics 2020: Advances in Genome & Molecular Biology Evolution Technologies

Genomics is an area within genetics that concerns the sequencing and analysis of an organism's genome. The fields of molecular biology and genetics are mainly concerned with the study of the role and function of single genes, a major topic in today's biomedical research. By contrast, genomics does not involve single gene research unless the purpose is to understand a single gene's effects in context of the entire.
