Market Analysis

Importance and Scope

A rare/orphan disease is outlined as a condition that affects fewer than 200,000 people. This definition was created by Congress within the Orphan Drug Act of 1983. There may be as many as 7,000 rare diseases and 70% of them have no form of treatment. Regulatory edges like longer market exclusivity breakthrough designations, reduced fees and tax incentives are all encouraging investment. However, the marketing process and lifecycle for a rare disease drug are very different to a mass market product and require particular skills and knowledge.

Rare Diseases 2019 will be the best platform for all the doctors, researchers, renowned Scientists, research scholars, students who are working in this field across the globe under a single roof to exchange their knowledge related to Rare Diseases and Orphan Drugs. This international event is an effort to find an alternative for invasive imaging technique against rare diseases like Zellweger syndrome, Muscular Dystrophy, Alkaptonuria, Angelman syndrome, Prader-Willi syndrome, Tay Sachs disease, Fragile X syndrome, Gaucher disease as well as many others.
