

# In-store hygiene evaluation and its relationship with microbiological indices of some foods, sold in different retail market places in Lithuania

assoc. prof. Aistė Kabašinskienė

8th International Conference on Food Safety & Regulatory Measures – Healthier the Food, Merrier the World; 11-12 June 2018 Barcelona, Spain

01 | INTRODUCTION

# Poor hygiene in retail market:

- leads to insufficient quality and safety of food;
- is related with foodborne outbreaks:
  - about 92% of all outbreacs occur because of insufficial staff' knowledges of food processing and personal hygiene.

Data of State Food and Veterinary Service official control

## Poor hygiene:

- has been detected in 27.5 % of officially controlled food retail places in 2017 in Lithuania;
- The main violations were:
  - insufficient environmental hygiene (cleanness);
  - insufficient conditions of waste products' storage;
  - cross-contamination of raw and processed foods;
  - finished expiry date of food products;
  - no food documents in place.

Data of State Food and Veterinary Service official control

### The importance of consumers in food control

- In 2016 active consumers helped to find out about 800 cases of untrustworthy producers, hygiene and other violations.
- Almost 3000 complaints were registered and analysed by State Food and Veterinary Service.
- Albout 90 % of retail markets are inspected annualy (422 inspections in 2016).

Data of State Food and Veterinary Service

# • Ready-to-eat products usualy represent the highest risk group;

- The main saurces of Food borne infections in 2017 were caused by meat and meat products (15.6 %), fish and fish products (11.9 %), salads (8.9 %) and unknown products (38.5 %).
- The main bacteria, caused foodborne infections, by consuming contaminated salads were *Salmonella* spp. (4.7 %).

Data of Department of Public Health and Care at the Ministry of Health of The Republic of Lithuania

The aim of the work was to evaluate in-store hygiene conditions (up to 28 points) in three different retail market places (supermarkets, medium size shops and farmers' markets; n=15) and the relationship with microbiological quality (Aerobic colony count (ACC), Coliforms and *E. coli*) and safety (*Salmonella spp., L. monocytogenes*) indices of the products: minced meat (chicken, pork, beef and turkey meat; n=96), cold and hot smoked fish (*Salmo salar, Clupea harengus membras, Abramis brama, Scomber scombrus*; n=96) and fresh coleslaw (n=40).

03 | INVESTIGATION PLAN I

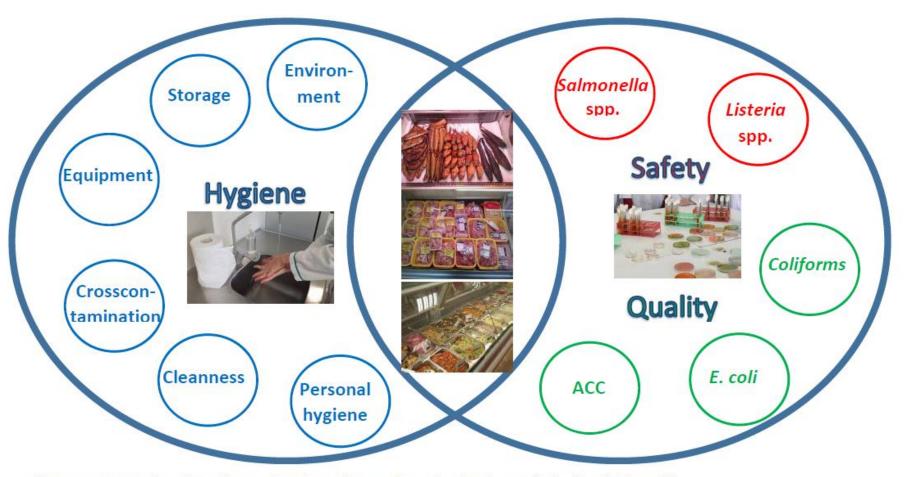

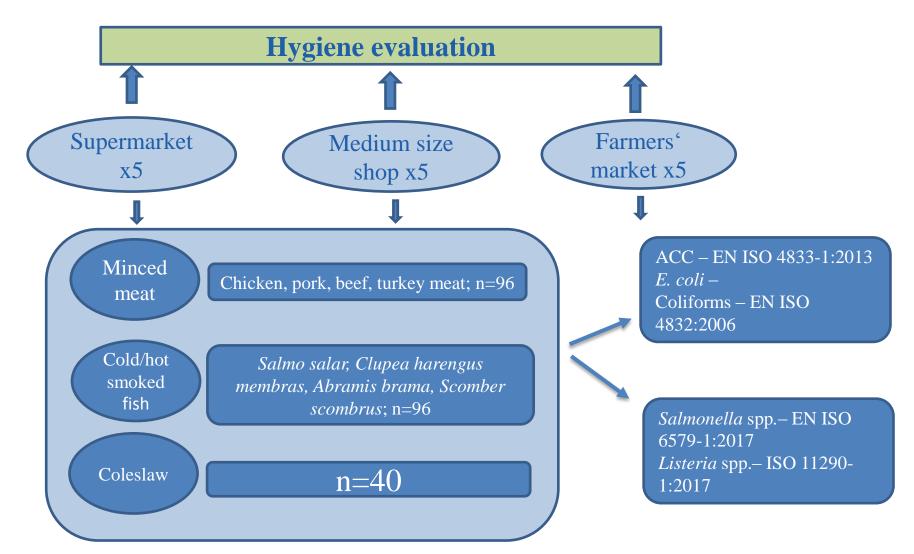

Figure 1. Investigation plan, showing the analysed criteria and their relationship

03 | INVESTIGATION PLAN II

#### 04 | HYGIENE EVALUATION METHODOLOGY

General requirements	Food processing requirements	Personal hygiene requirements
1. Premises (layout, cleanness)	6. Temperature of refrigeration equipment	11. Personal protective measures (head covers)
2. Technical installations	7. Arrangement of products in fridges	12. Personal protective measures (clothes)
3. Hand washing equipment	8. Tools and inventory	13. Hand hygiene
4. Refrigerating equipment	9. Touching/placing of products	14. Personal hygiene skills (hand washing)
5. Food contacting surfaces	10. Packages	

#### **Final hygiene evaluation:**

25-28 points – sufficient; 16-24 points – partly sufficient; 0-15 points – insufficient

05 | HYGIENE EVALUATION RESULTS

## Hygiene evaluation in different retail market places

Average hygiene	points
Supermarkets	27.9±0.20
Medium size shops	23.3±2.05
Farmers markets	12.5±4.5

### Detailed Hygiene evaluation in Farmers markets (1)

		Farmers markets (nx3) and evaluation of hygiene in points															Average hygiene evaluation, max 5 points	
							2		3				4			5		n=5
1	. General requ	irements (max 10 points)																
1.1.	Premises (layout,	Rebuilding is needed, visualy unclean, premises of stock and final product intercross.															0	1.2
	cleanness)	Rebuilding is needed, visualy unclean, premises of stock and final product do not cross.	1	1	1				1	1	1			1	1	1		
		Correct layout, clean, no risk of intercrossing.				2	2	2				2	2					
1.2.	Technical installations	No additional lighting, no ventilation, no water, supply.																1.4
		Additional lighting is not working, no ventilation, only cold water							1	1	1	1	1	1	1	1	1	
		Adequate lighting, ventilation, thermometers in place, hot and cold water	2	2	2	2	2	2										
1.3.	Hand washing equipment	There are washbasins, but there are no soap, disinfectants, paper towels				0												1.1
		There are washbasins, there are soap and disinfectants, but no paper towels	1				1	1	1		1	1	1	1	1	1	1	
		There are washbasins, soap, disinfectants, paper towels		2	2					2								
1.4.	Refrigerating equipment.	Surfaces visually unclean, old food residues are visible, no control thermometer in fridges					0					0	0		0		0	0.8
		Surfaces visually unclean, old food residues are visible, control thermometers are in fridges			1	1		1	1	1	1			1		1		
		Surfaces visually clean, no food residues, control thermometers are in fridges	2	2														
1.5.	Food contacting	Unclean, abrasions and old food residues are visible				0	0		0	0	0							0.9
	surfaces	Abrasions are visible, but surfaces are clean	1	1	1			1				1	1	1	1	1	1	
		Clean, smooth								2	2							

#### Detailed Hygiene evaluation in Farmers markets (2)

		Farmers markets (nx3) and evaluation of hygiene in points															Average hygiene evaluation, max 5 points	
										3			4	5				n=5
2. Fo	od processing re-																	
2.1.	Temperature	Aboxe +6°C												0				1.9
	of the fridge	Below 0°C																
		0-6°C	2	2	2	2	2	2	2	2	2	2	2		2	2	2	
2.2.	Arrangement	Arrangement of products is disoredered				0	0		0	0	0	0	0	0	0	0		0.7
	of products in fridges	Products are arranged according their sort	2	2	2			2									2	
2.3.	Tools and	Tools are not signed, visually unclean				0			0	0	0							0.7
	inventory	Tools are signed, visually insufficiently clean	1	1	1		1	1				1	1	1	1	1	1	
		Tools are signed, clean																
2.4.	Touching/ Placing of	Products touch other surfaces during placing (shelf, package, etc.)	0		0	0	0	0	0	0	0	0			0	0	0	0.4
	products	Products do not touch other surfaces during placing (shelf, package, etc.)		2									2	2				
2.5.	Packages	Packages are visually unclean and leaky												0				1.3
		Packages are visually unclean or leaky				1	1			1	1	1	1		1	1	1	
		Packages are visually clean, not leaky and whole	2	2	2			2	2									
	Average total evaluation									3.3			4.3			4.7		

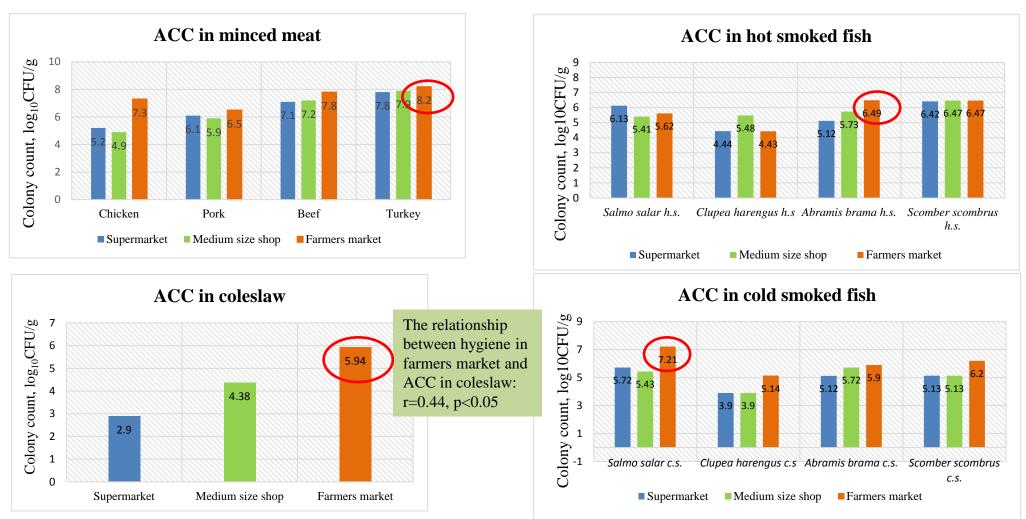

### Detailed Hygiene evaluation in Farmers markets (3)

	Description						Farmers markets (nx3) and evaluation of hygiene in points														
				1		2				3		4				5		n=5			
3. Pe	<u>rsonal hygiene re</u>	equirements (max 8 points)																			
3.1.	Personal head	No head cover, hair is not tied	0		0		0		0	1	0		0		0			0.5			
	protective	No head cover, hair is tied well		1		1		1				1		1		1	1				
	measures	Adequate head cover, hair is tied																			
3.2.	Personal [	No working clothes, no apron	0									0				0	0	0.7			
	protective	Working clothes are visually unclean.		1	1	1	1	1	1	1	1		1	1	1						
	measures	disordered, no apron																			
	(clothes)	Clean and suitable working clothes																			
3.3.	Hand hygiene	No gloves		0						0		0	0		0	0	0	0.5			
		Gloves are used, but unclean or tattered	1		1	1	1	1	1		1			1							
		Clean gloves are used																			
3.4.	Personal hygiene skills	Hands are not washed and disinfected before begining to work				0			0	0				0	0	0		0.6			
	(hand washing)	Hands are washed, but insufficiently, disinfected if necessary	1	1	1		1	1			1	1	1				1				
		Hands are washed correctly and disinfected if necessary																			
		Average total evaluation		2.7			3.3			2.3			2.3			1.3					

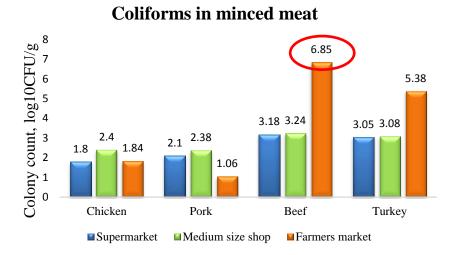

#### Aerobic colony count (ACC) in analyzed foods

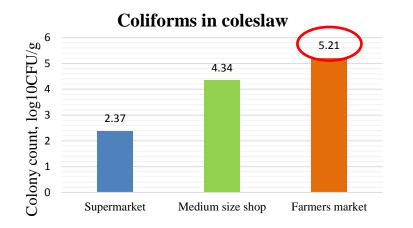

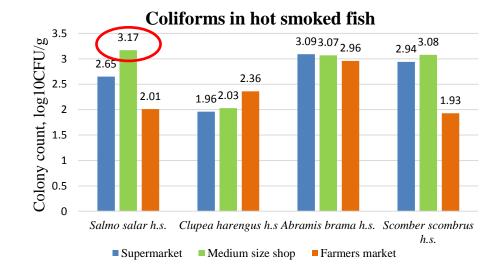

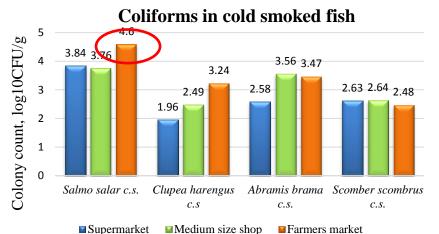

#### 06 | RESULTS OF FOOD MICROBIOLOGICAL ANALYSIS

#### **Coliforms in analyzed foods**

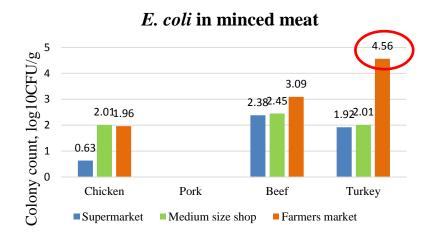

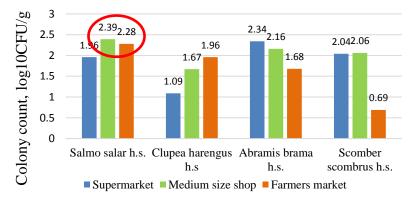

#### 06 | RESULTS OF FOOD MICROBIOLOGICAL ANALYSIS

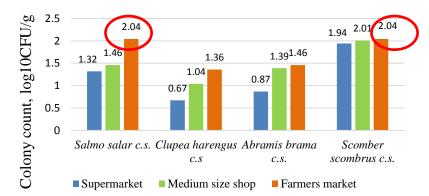

#### E. coli in analyzed foods

#### E. coli in hot smoked fish

#### E. coli in cold smoked fish

#### E. coli in coleslaw – not found

- 1. The most often found hygiene violations were improper storage conditions of the food, cross contamination and poor personal hygiene.
- Hygiene of the farmers' markets was evaluated as insufficient (12 points out of 28), whereas the highest hygiene level (28 points out of 28) was assured in supermarkets:
  - the hygiene conditions of farmers had a positive correlation (r=0.44, p<0.05) on the ACC of the products.
- 3. The highest counts of aerobic bacterias, coliforms and *E. coli* were found in foods, sold in farmers markets: in turkey meat (ACC- 8.18 log CFU g<sup>-1</sup>), in coleslaw (coliforms 5.21 log CFU g<sup>-1</sup>), beef (coliforms 6.85 log CFU g<sup>-1</sup>) and turkey meat (*E. coli* 4.56 log CFU g<sup>-1</sup>).
- 4. Salmonella spp. and Listeria spp. were absent in all samples.
