

Genetic Diversity Studies of Cluster Bean (*Cyamopsis tetragonoloba* L.): An Emerging Industrial Crop

Aravind K Jukanti

Central Arid Zone Research Institute
Jodhpur, India

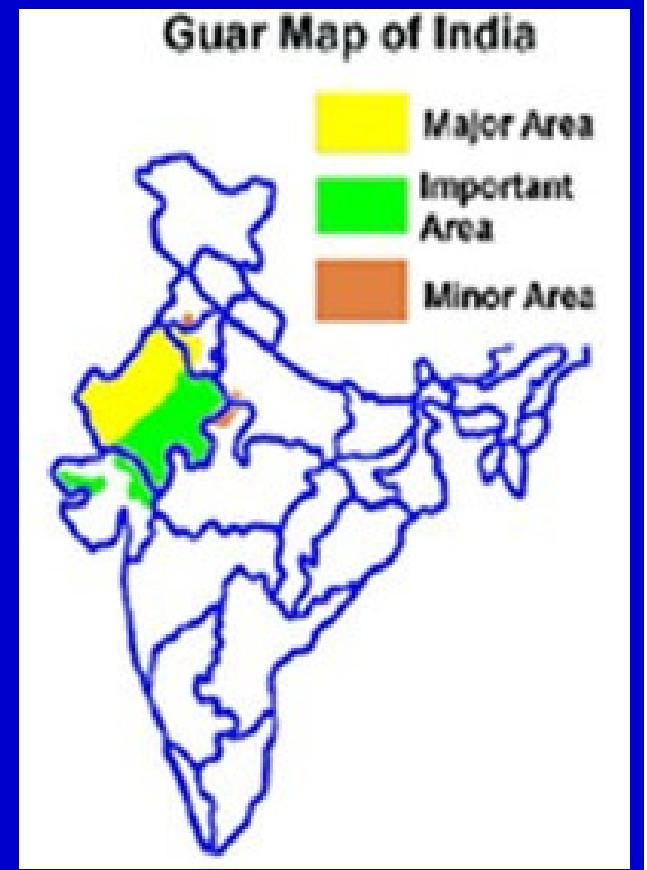

Introduction

- ❖ Cluster bean, commonly known as ‘**guar**’, is an important annual N₂ fixing arid legume.
- ❖ Cluster bean is drought tolerant/deep roots – mostly grown in arid and semi-arid regions.
- ❖ It is grown as food, forage and green manure crop.
- ❖ Most importantly it is grown for “Galactomannan” – a natural hydrocolloid, commonly called “**Guar gum**”.
- ❖ In arid farming systems - taming drought conditions, diversification of agriculture and an important industrial crop.

Cluster Bean Production

- ❖ Major countries - India, Pakistan, USA, Italy, Morocco, Germany and Spain.
- ❖ India accounts for about 80% of the world cluster bean production.
- ❖ In India - Rajasthan, Haryana, Gujarat and Madhya Pradesh.
- ❖ Estimated area, production and yield (India) during 2013-14 are 5.6 M ha, 2.7 MMT, and 485 kg/ha respectively.

Production Statistics of Cluster Bean in India

Year	Area ('000 ha)	Production ('000 tons)	Yield (kg/ha)
2009-10	2996	595	199
2010-11	3382	1965	581
2011-12	3444	2218	644
2012-13	5152	2461	478
2013-14 [±]	5603	2715	485

Year	Area ('000 ha)			Production ('000 tons)			Yield (kg/ha)		
	R*	H*	G*	R	H	G	R	H	G

Industrial Applications

Industry	Uses	Functions
Food	Bread, cakes, pastry, yoghurt, ice cream	moisture retention, increased shelf life
Pharmaceutical	Laxative/slimming/acidity/diabetes	appetite depressant, reduces glucose loss, reducing agent
Cosmetics	Shampoo/conditioner/ointment /lotions	protective film forming & thickening/lubricating agent
Textile printing	Cotton, silk, wool sizing and carpet printing	Reduces wrap breakage, thickening for dye
Mining	Ore concentration and filtration	Flocculating and settling agent
Explosive	Stick explosive and blasting Slurries	Water proofing/gelling agent
Oil well drilling	Drying fluids and hydraulic fracturing	Water loss control, viscosity/suspension/turbulence and friction reduction

Cluster Bean Gum

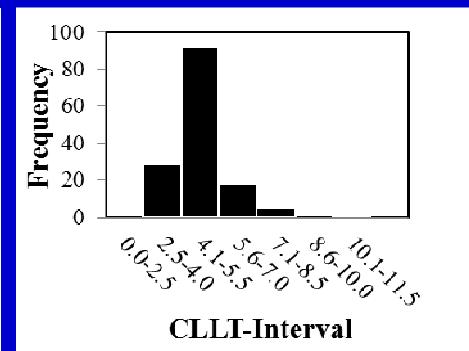

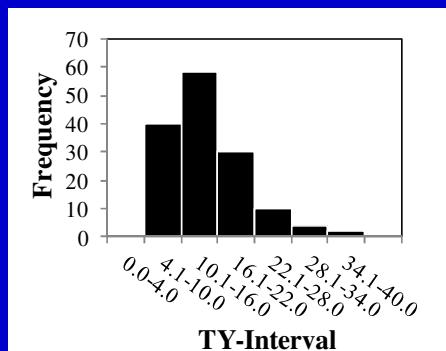

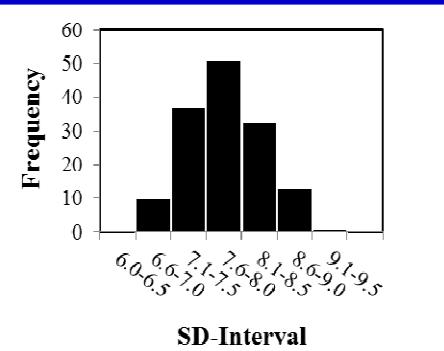

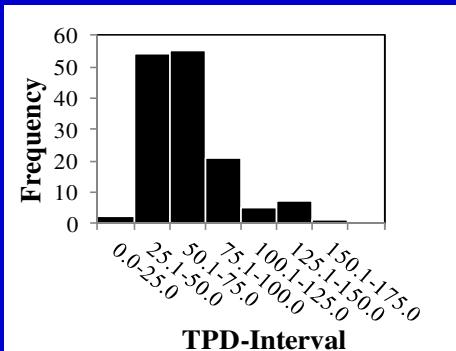

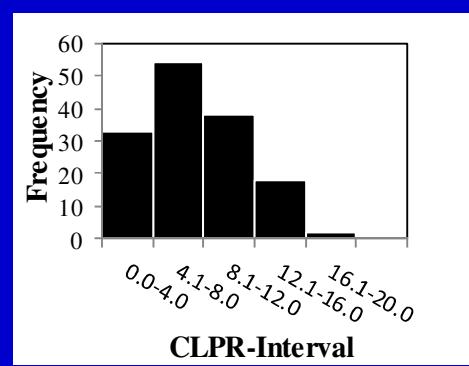

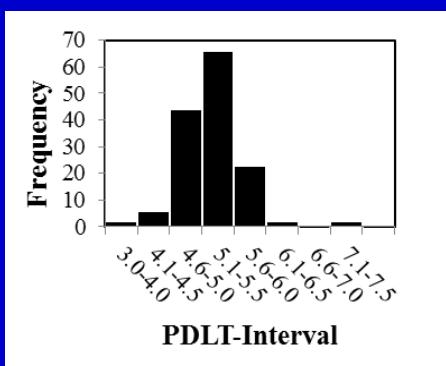

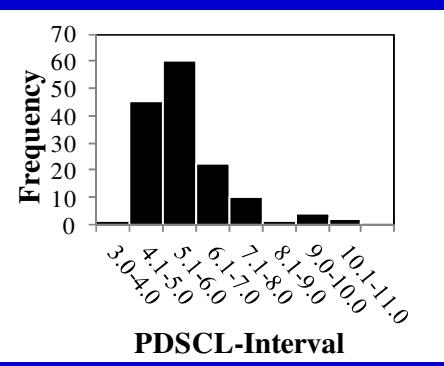

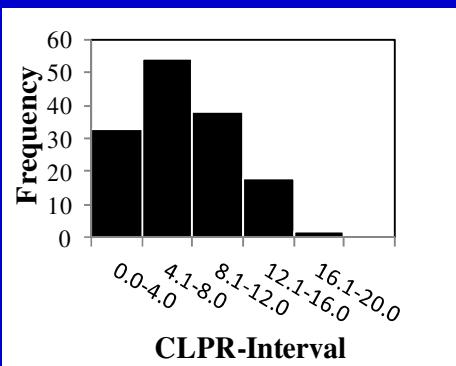

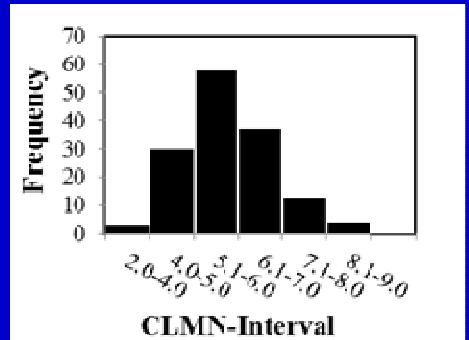

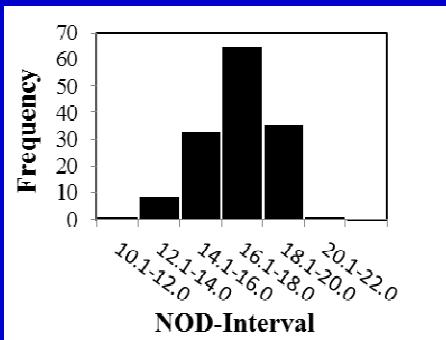

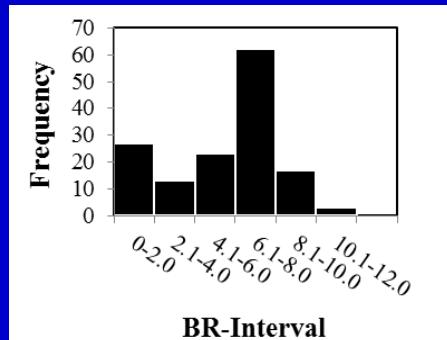

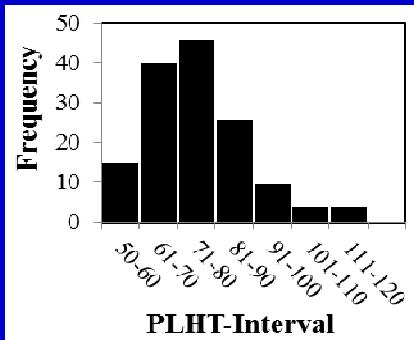

- ❖ Cluster bean gum consists of mannose backbone with galactose side units.
- ❖ Ratio of mannose to galactose is about 2:1 (Robinson et al 1982).
- ❖ The molecular weight is 200,000 – 300,000 Da (Glicksman 1969).
- ❖ Galactomannan has good water binding and viscous dispersion forming ability (in water).
- ❖ Viscosity of the gum varies with particle size and moisture content.

Experimental Outlay

- ❖ Number of lines screened:
140 + 5 check varieties (RGC 112/RGC 936/RGC 1003/RGC 1031/RGC 1066).
- ❖ Seasons evaluated: Kharif 2012 (CAZRI farm, Jodhpur)
Summer 2013 (ARS farm, Mandore)
- ❖ Recommended agronomic practices followed with a spacing of 50 x 15 cm in 4m rows in augmented design.
- ❖ Data recorded on: plant height, number of branches/nodes/pods, clusters on main/primary branch, cluster length, pod length, pods/cluster, seed number, yield/plant.
- ❖ Statistical tools used: SAS software

± check varieties

Conclusions

- ❖ Several traits exhibited high heritability and genetic advance.
- ❖ Total yield has significant positive correlation with CLPR (0.6), PDSCL (0.3) and TPD (0.8).
- ❖ RAPD analysis revealed good genetic diversity among the lines evaluated.
- ❖ IC-311443 (30.1%) and IC-31392 (31.4%) had high gum content.
- ❖ IC-370563 (31.2 gm/pt) and IC-421815 (31.53 gm/pt) were the best performing lines.

Thank you
