09/24/2014

Bovine trichomoniasis

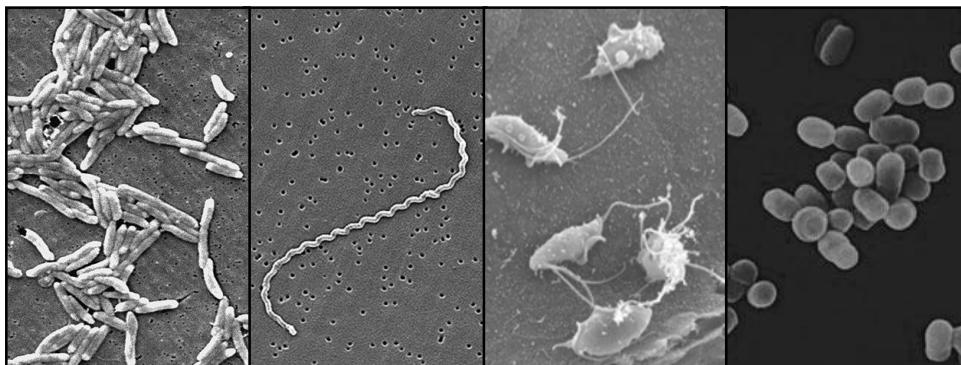

- **Prevalence in bulls**
- **Infection in females with abortion**
- **Risk factors associated with positive herds**

Reproductive diseases of cattle

| Disease | Causative agent |
|----------------|------------------------------|
| Vibriosis | <i>Campylobacter fetus</i> |
| Leptospirosis | <i>Leptospira pomona</i> |
| Trichomoniasis | <i>Tritrichomonas foetus</i> |
| Brucellosis | <i>Brucella abortus</i> |

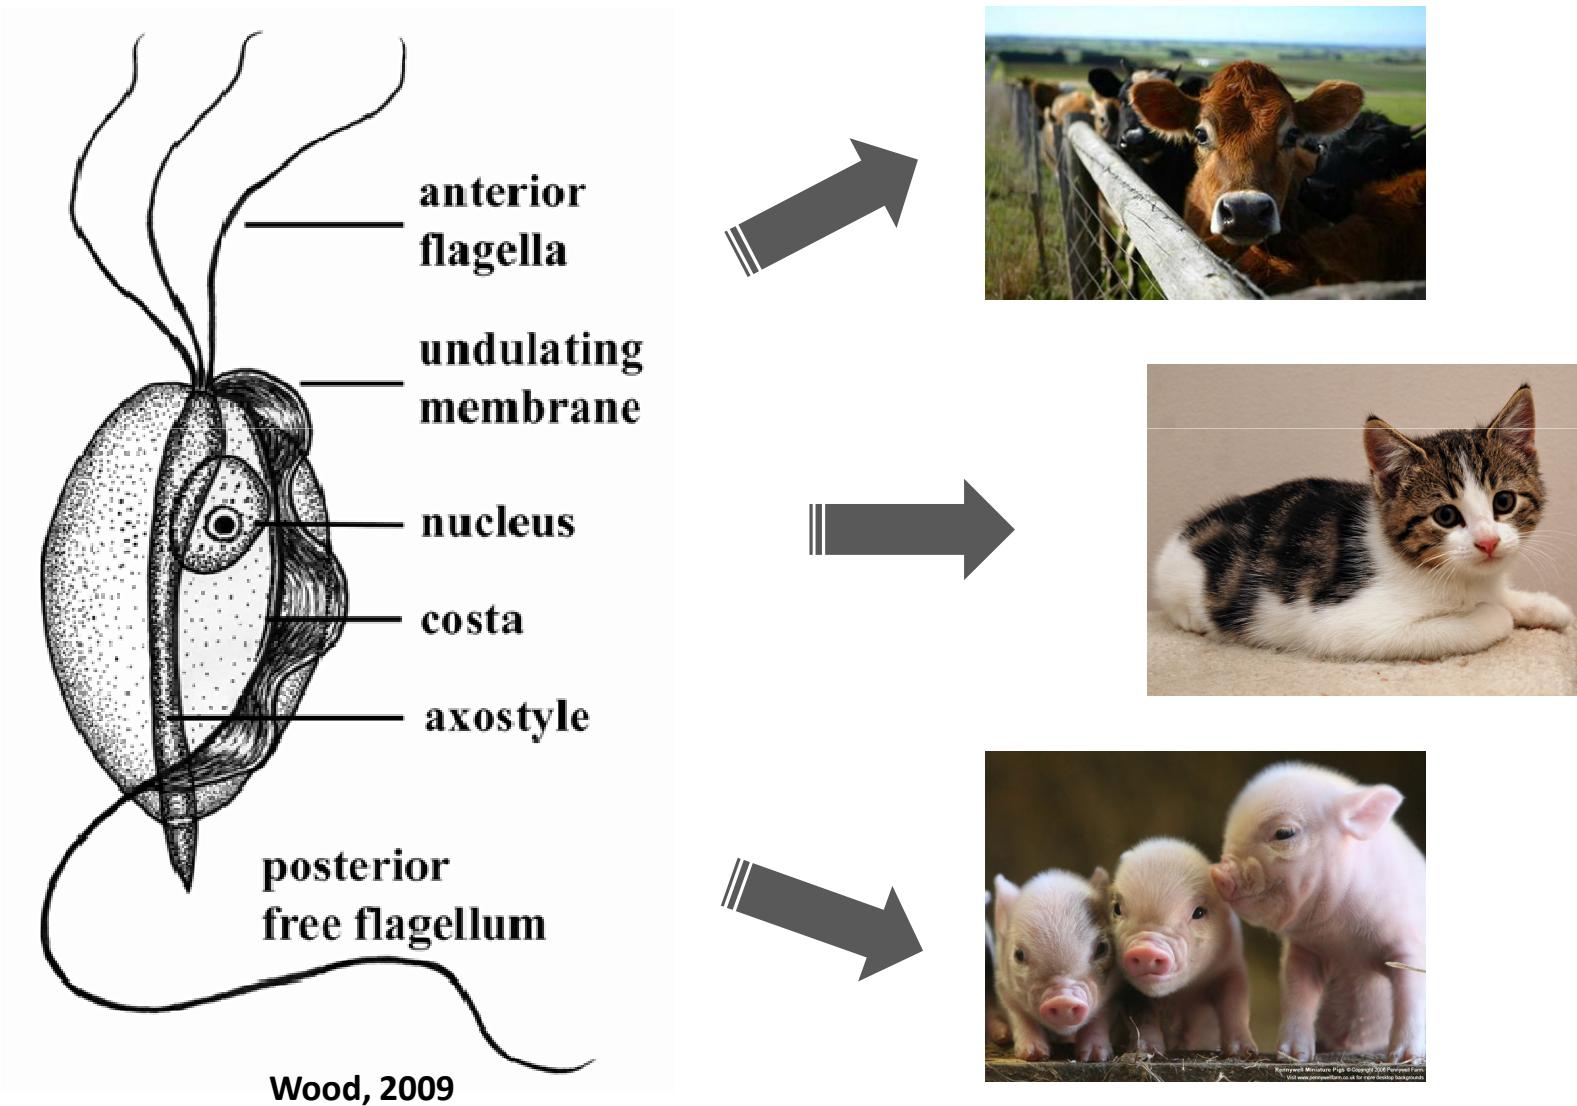

**\$441-502 MILLION
ANNUAL LOSS FOR BEEF
PRODUCERS**

Tritrichomonas foetus

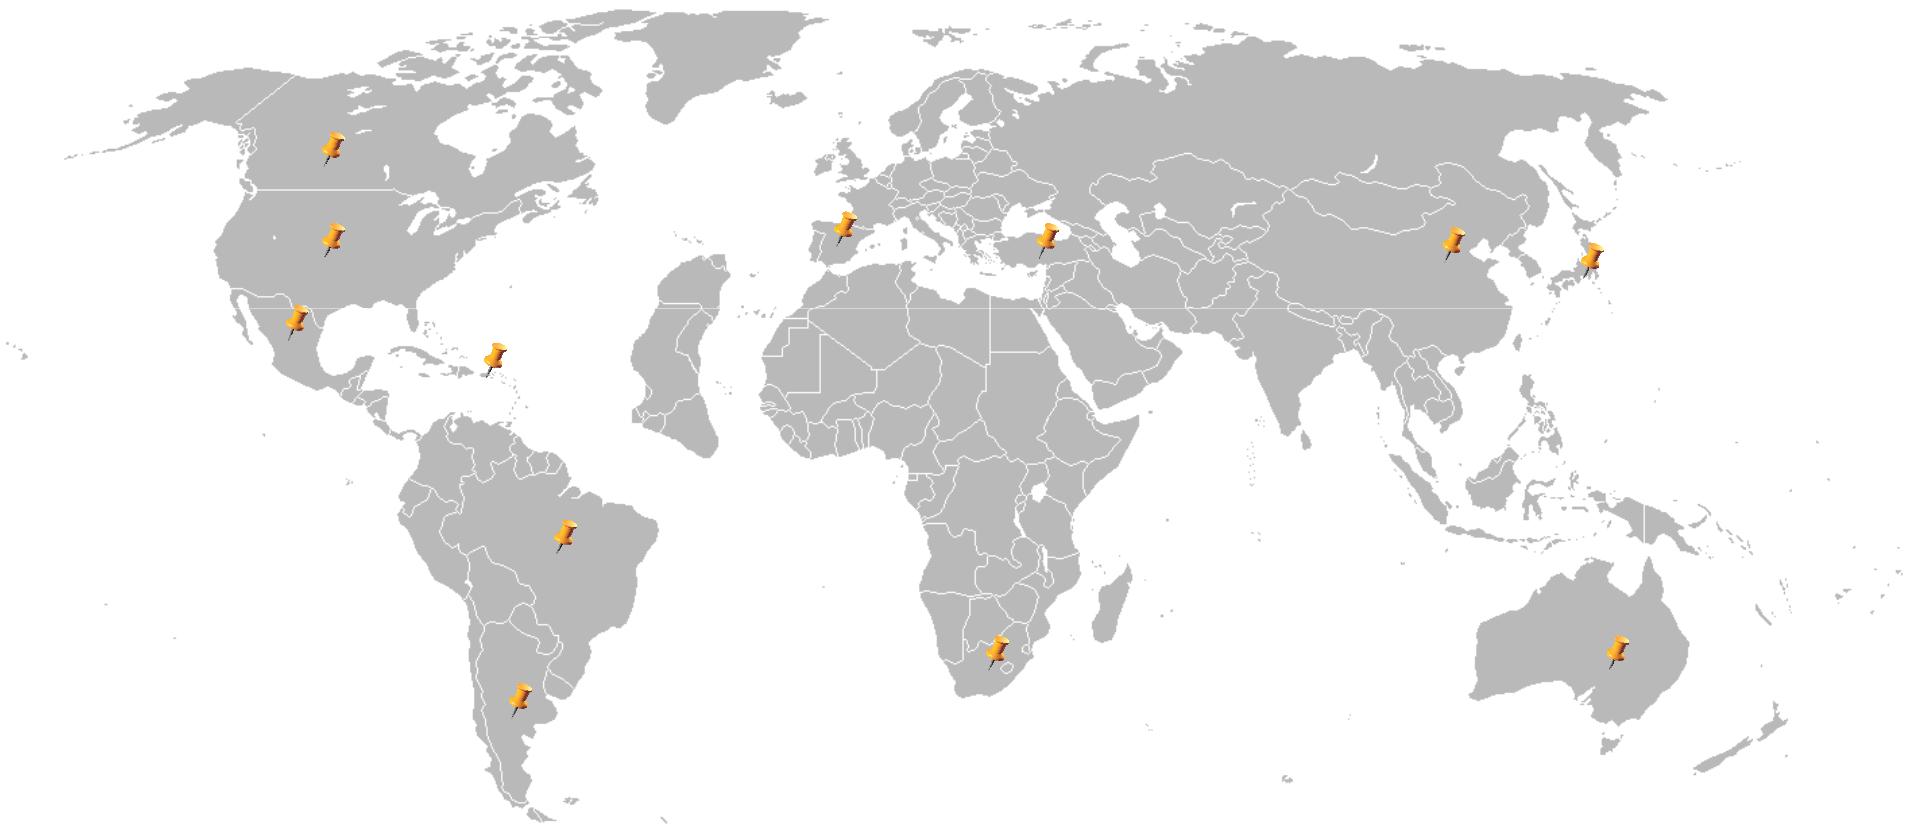

Life cycle and transmission

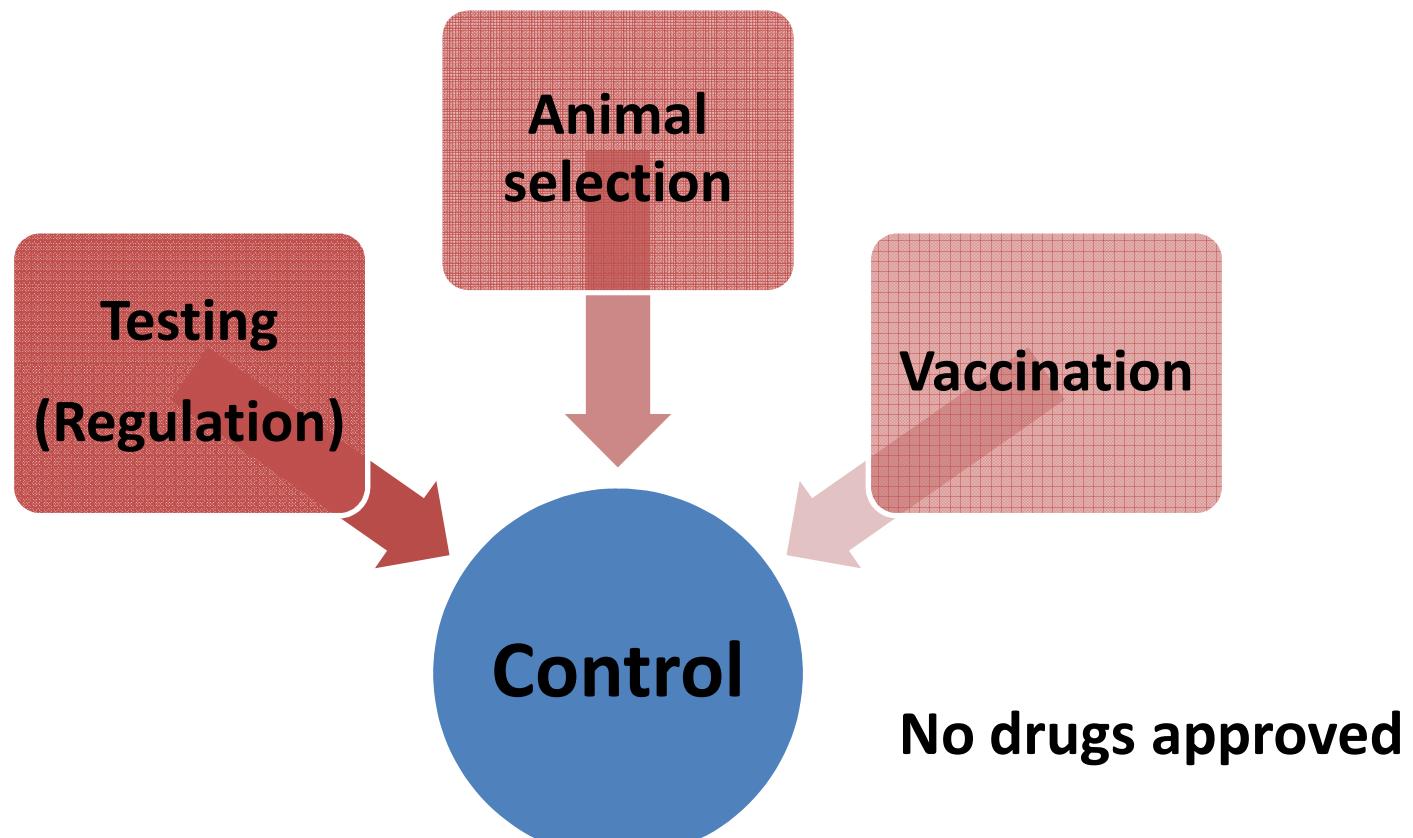

Mariante et al., 2004

World distribution of bovine trichomoniasis

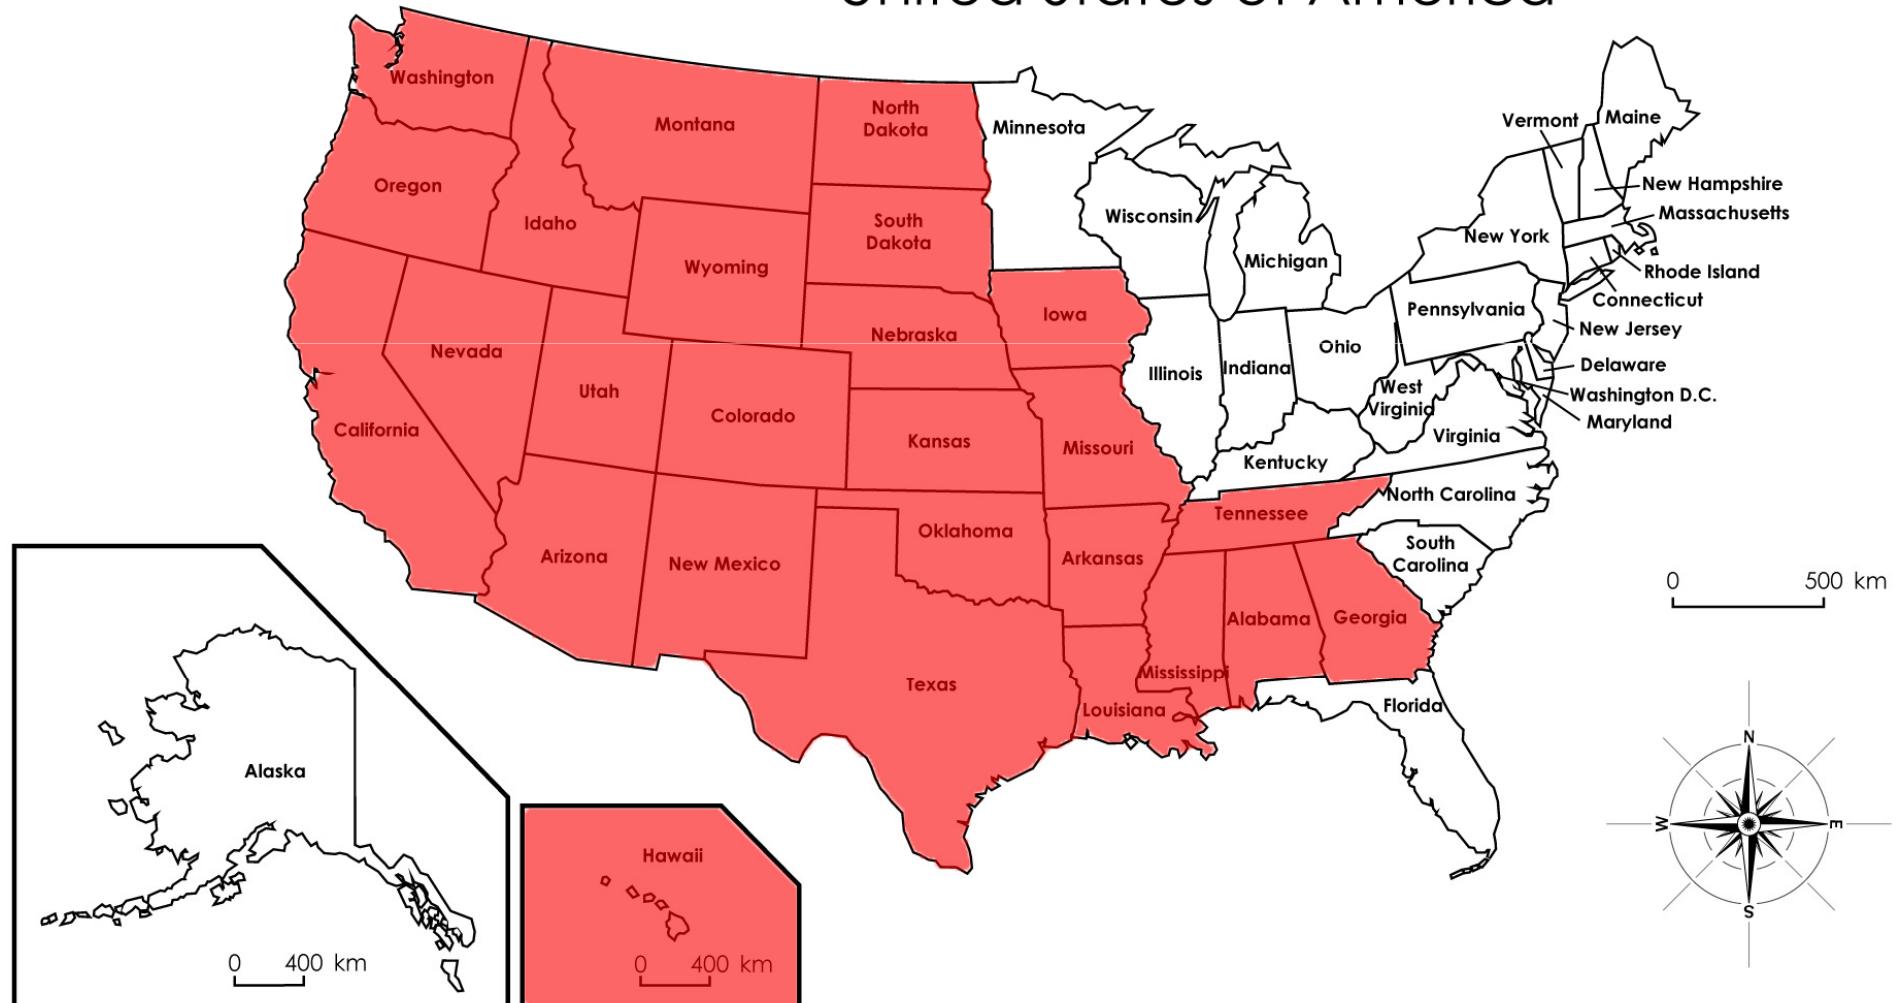

Current control strategies

States with trichomoniasis programs

United States of America

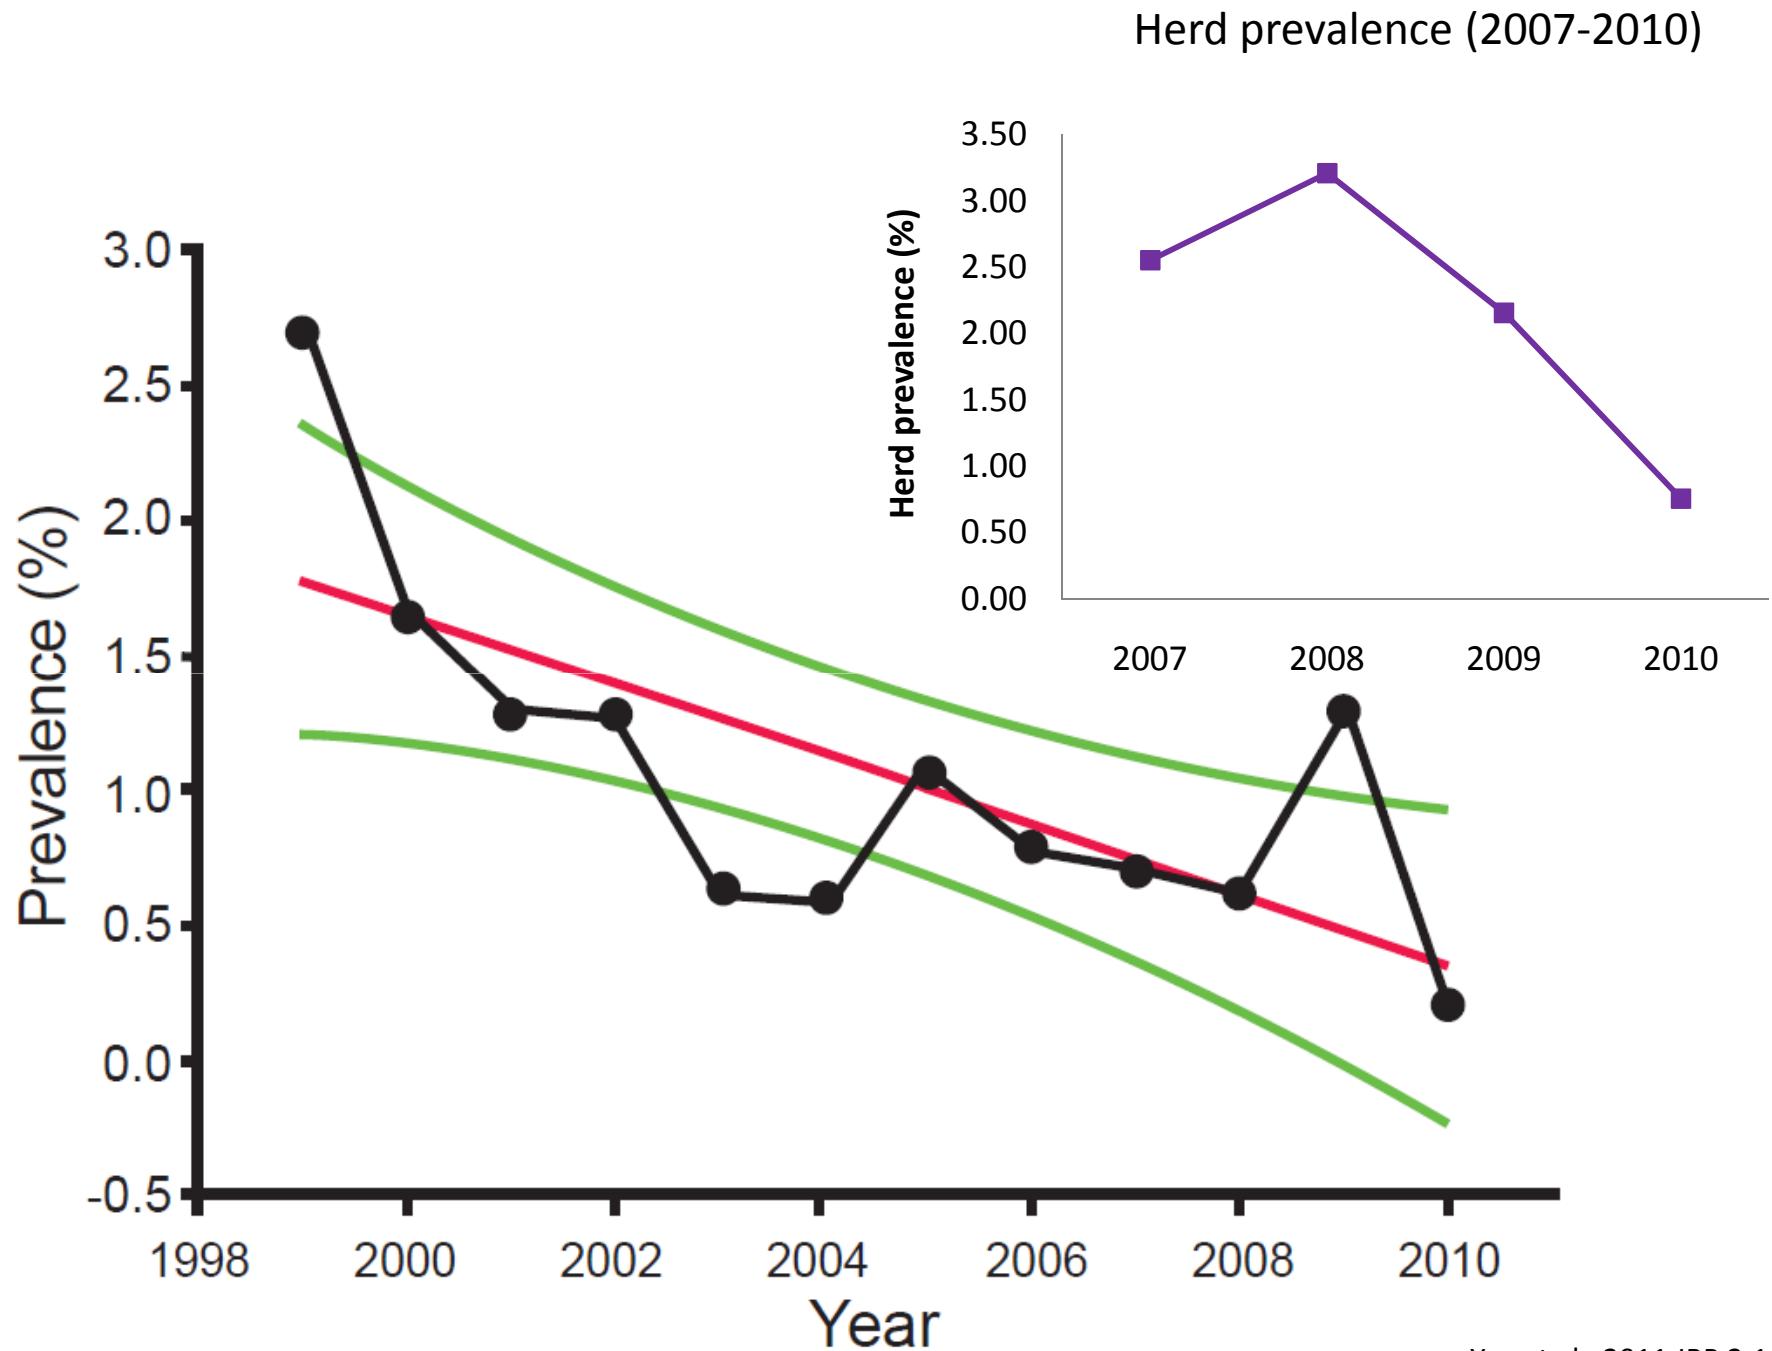

Prevalence in bulls

Data – Wyoming State Veterinary Laboratory (WSVL) and Wyoming Livestock Board between January 1, 1997 and December 31, 2010

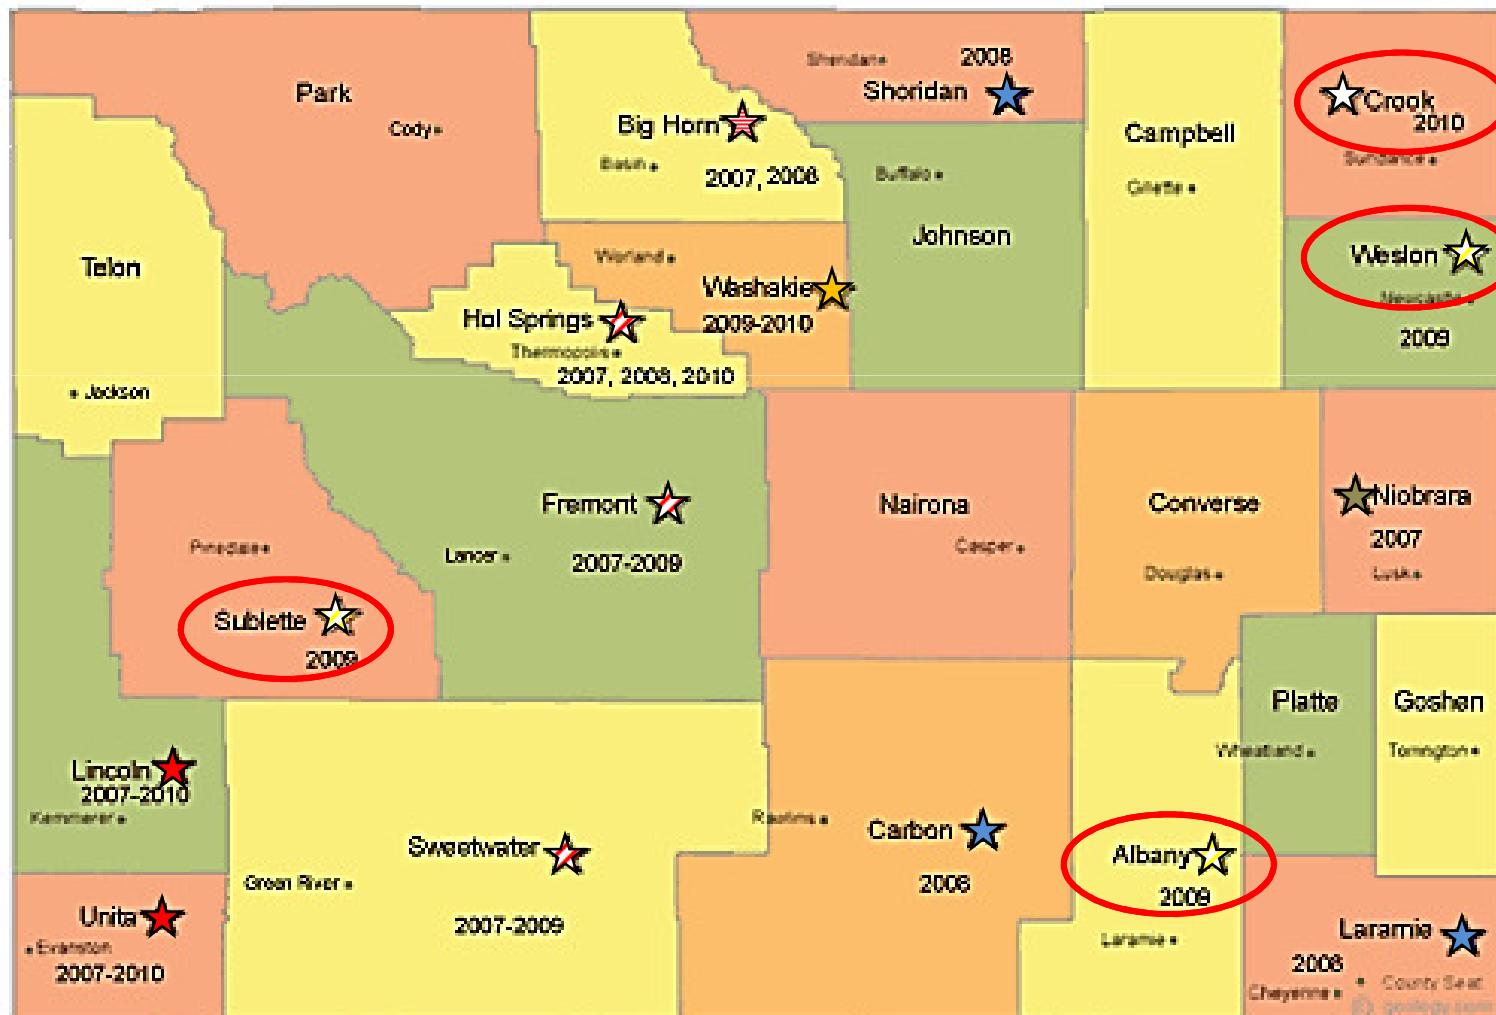

Testing for *T. foetus* – culture in Diamond's medium & PCR to amplify a 347bp fragment of 5.8S ribosomal RNA and the internal transcribed spacer region using primer pairs TFR3 and TFR4 (Felleisen RS et al., 1998. J Clin Microbiol 36: 513)

Prevalence in Wyoming beef cattle – bull

| Year | Bulls tested | Bulls positive | Prevalence (%) | Predicted prevalence $F(x)=261.020047 - 0.129685x$ |
|------|--------------|----------------|----------------|-------------------------------------------------------|
| 1997 | 433 | 5 | 1.15 | |
| 1998 | 919 | 18 | 1.96 | |
| 1999 | 1525 | 41 | 2.69 | 1.78 |
| 2000 | 4604 | 76 | 1.65 | 1.65 |
| 2001 | 6025 | 78 | 1.29 | 1.52 |
| 2002 | 5767 | 73 | 1.27 | 1.39 |
| 2003 | 6855 | 43 | 0.63 | 1.26 |
| 2004 | 7515 | 44 | 0.59 | 1.13 |
| 2005 | 7450 | 79 | 1.06 | 1.00 |
| 2006 | 7270 | 57 | 0.78 | 0.87 |
| 2007 | 7080 | 50 | 0.71 | 0.74 |
| 2008 | 7275 | 45 | 0.62 | 0.61 |
| 2009 | 7597 | 98 | 1.29 | 0.48 |
| 2010 | 8222 | 17 | 0.21 | 0.35 |

Expansion of geographic distribution

Infection in females with abortion

Data – Wyoming State Veterinary Laboratory (WSVL)
between January 1, 2000 and December 31, 2010

Testing for *T. foetus* – culture in Diamond's medium & PCR to amplify a 347bp fragment of 5.8S ribosomal RNA and the internal transcribed spacer region using primer pairs TFR3 and TFR4 (Felleisen RS et al., 1998. J Clin Microbiol 36: 513)

Testing in beef cows/heifers in Wyoming with abortion

| Year | Ntot of accessions | Ntot of bull samples | PCR Ntot of cows/heifers (Npos) | Culture Ntot of cows/heifers (Npos) | PCR Ntot of fetus (Npos) | Culture Ntot of fetus (Npos) |
|-------|-----------------------|-------------------------|------------------------------------|----------------------------------------|-----------------------------|---------------------------------|
| 2000 | 193 | 1530 | 0 | 0 | 0 | 0 |
| 2001 | 707 | 6337 | 0 | 8 (0) | 0 | 0 |
| 2002 | 693 | 6750 | 0 | 12 (2) | 0 | 0 |
| 2003 | 624 | 5587 | 0 | 14 (7) | 0 | 1 (0) |
| 2004 | 720 | 6246 | 0 | 9 (0) | 0 | 1 (0) |
| 2005 | 771 | 8226 | 0 | 9 (0) | 0 | 1 (0) |
| 2006 | 834 | 8336 | 0 | 2 (0) | 0 | 0 |
| 2007 | 777 | 7657 | 4 (0) | 7 (0) | 2 (0)† | 2 (0) |
| 2008 | 755 | 8627 | 1 (0) | 2 (0) | 3 (0) | 1 (1)‡ |
| 2009 | 802 | 8454 | 4 (0)* | 2 (0) | 2 (0) | 2 (0)‡ |
| 2010 | 943 | 10059 | 17 (0) ¥ | 14 (0) | 3 (0) | 4 (0) |
| Total | 7819 | 77809 | 26 (0) | 79 (9) | 10 (0) | 12 (1) |

Testing results for *T. foetus* among samples collected in Wyoming from the genital tract of cows/heifers with abortion and aborted fetuses

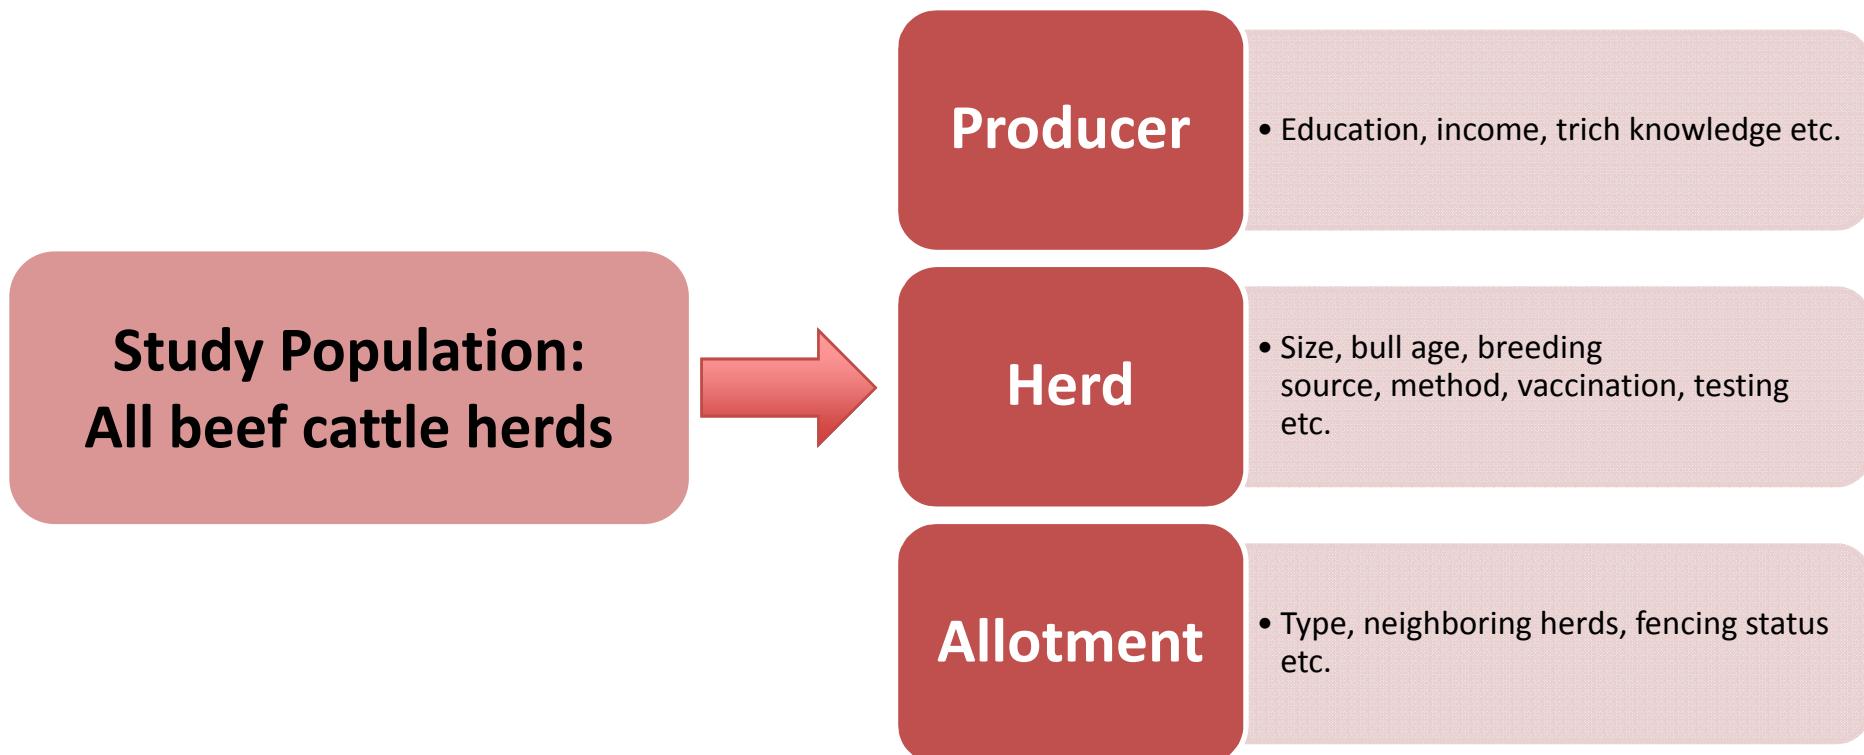

| Sample | Npos | Ntot | %pos |
|-----------------------|----------|-----------|------------|
| Aborted fetus | 1 | 22 | 4.5 |
| Placenta ⁺ | 1 | 4 | 25.0 |
| Cows/heifers | | | |
| Uterus | 8 | 53 | 15.1 |
| Vagina | 1 | 11 | 9.1 |
| Cervix | 0 | 29 | 0.0 |
| total | 9 | 93 | 9.7 |

Risk factors associated with positive herds

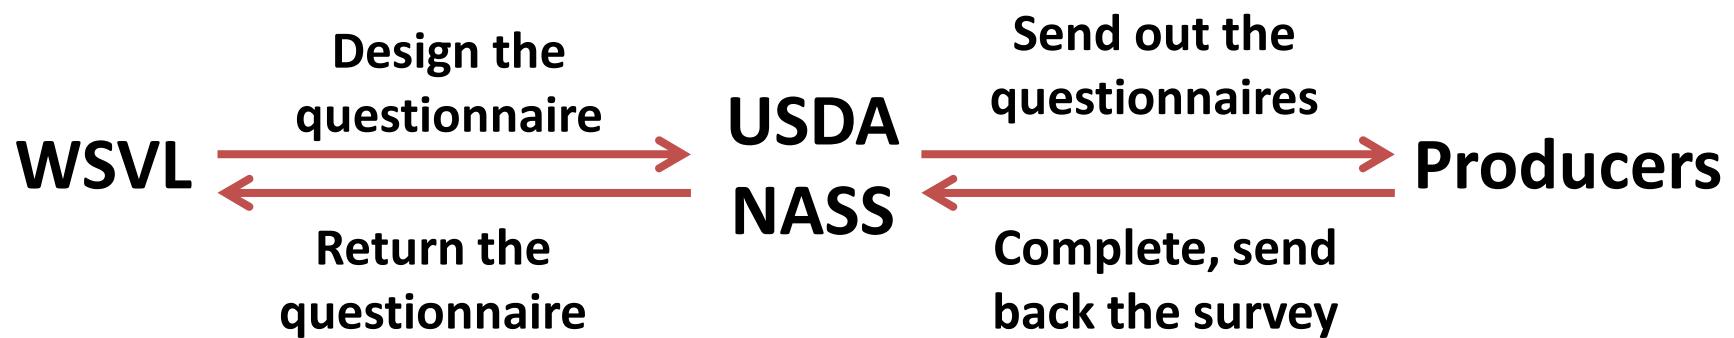

- Aim**

To identify risk factors associated with herds infected with *T. foetus* in Wyoming beef cattle.

Study design

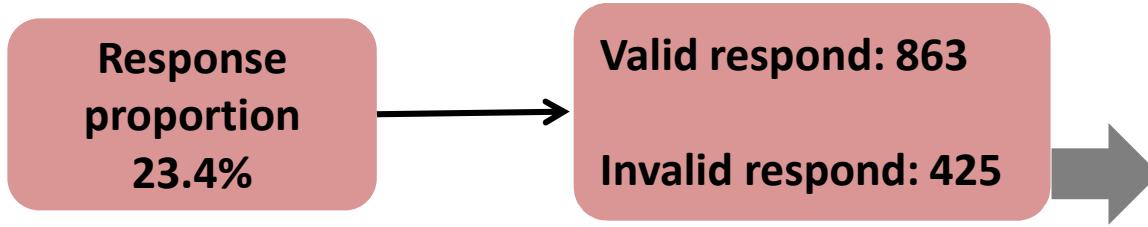

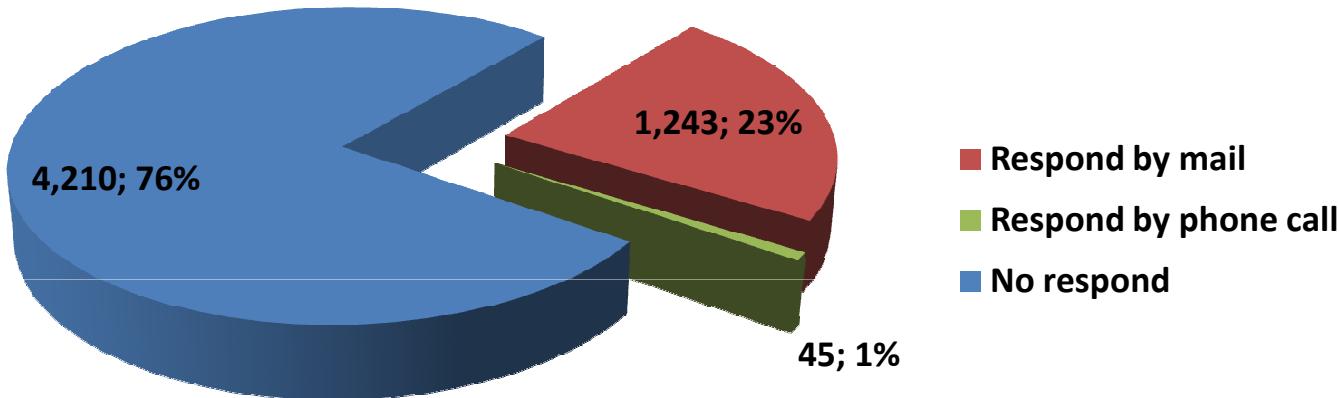

Survey conduction

Confidential

Proportion of respondents

Total: 5,498

Analytical methods

Software

- Microsoft office Excel
- IBM SPSS19
- SISA (online tool)

Quality control

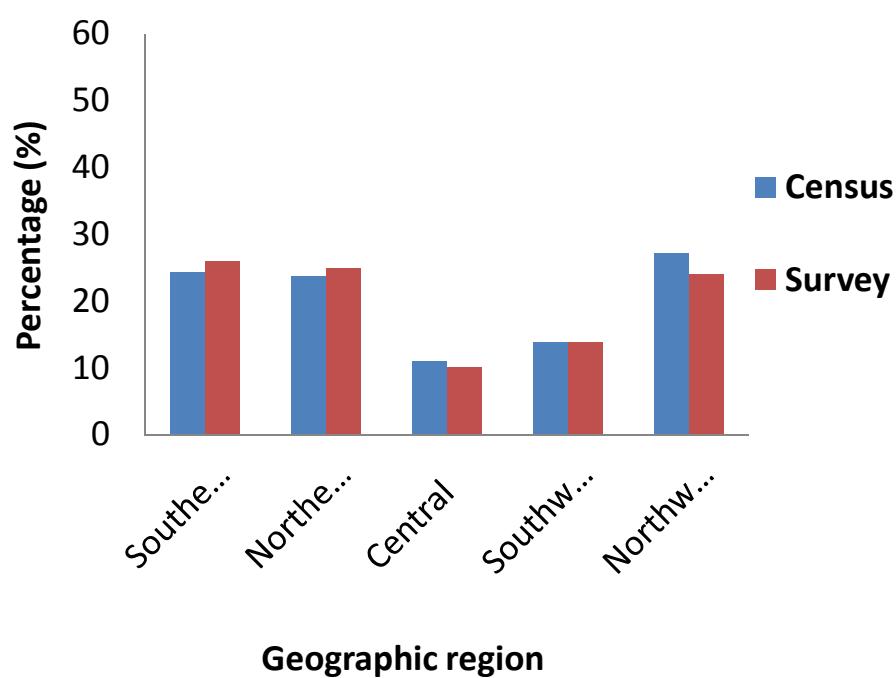

- Data confirmation
- Refinement
- Exclusion of unqualified data

Statistical method

- Frequency analysis
- Pearson's chi-square
- Fisher's exact test

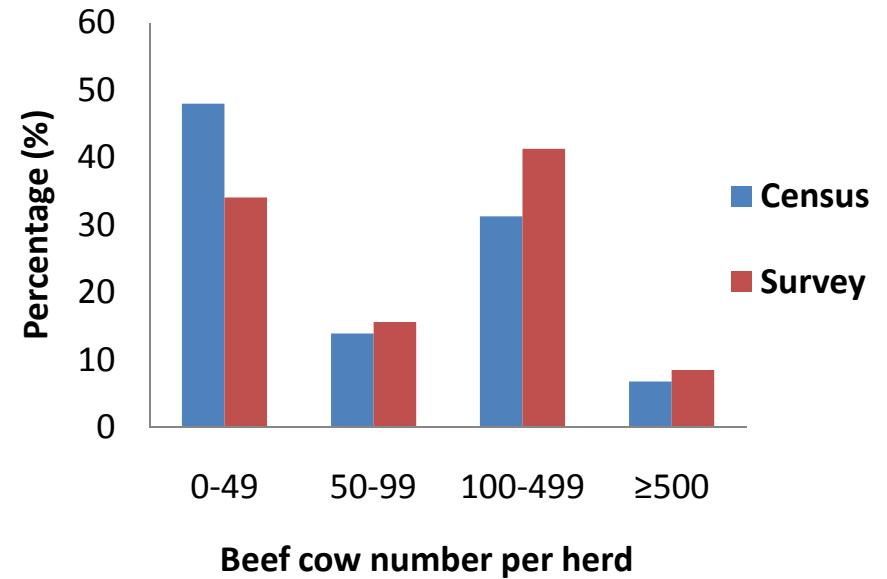

Feedback

Feedback by geographic regions

($\chi^2=0.769, p>0.94$)

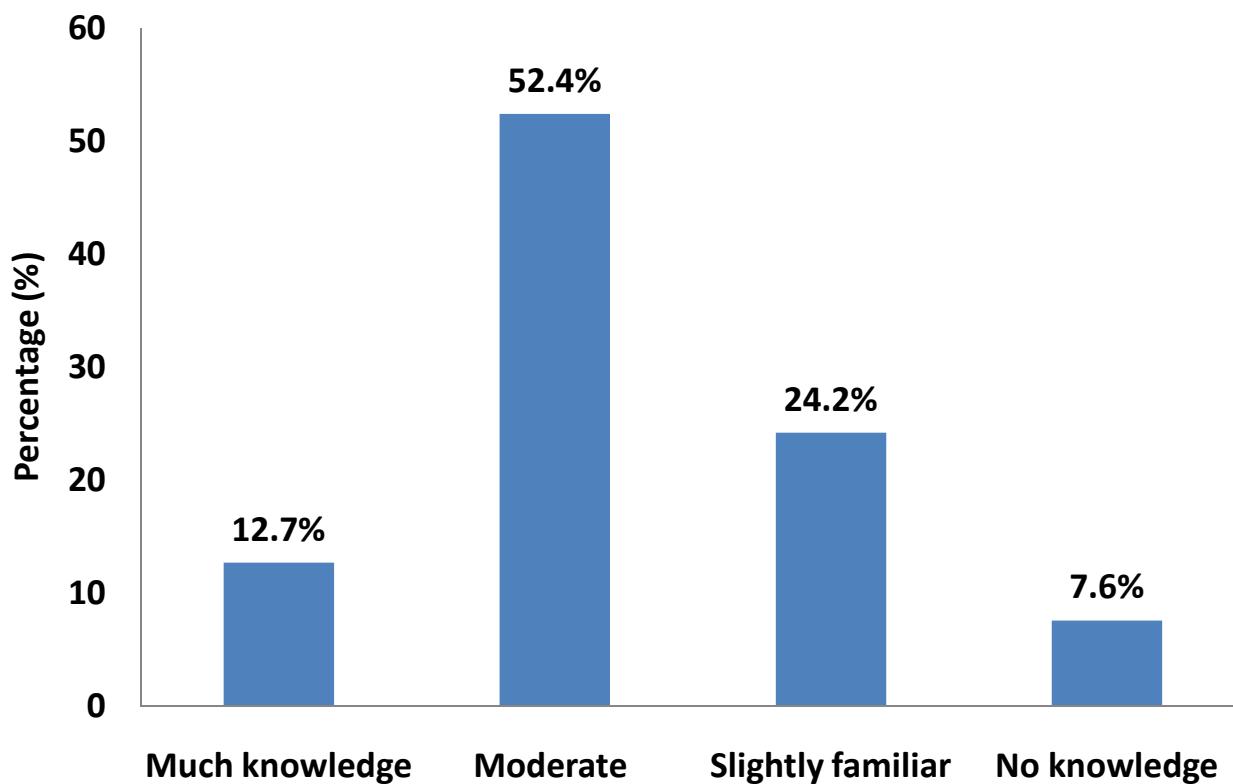

Feedback by herd size

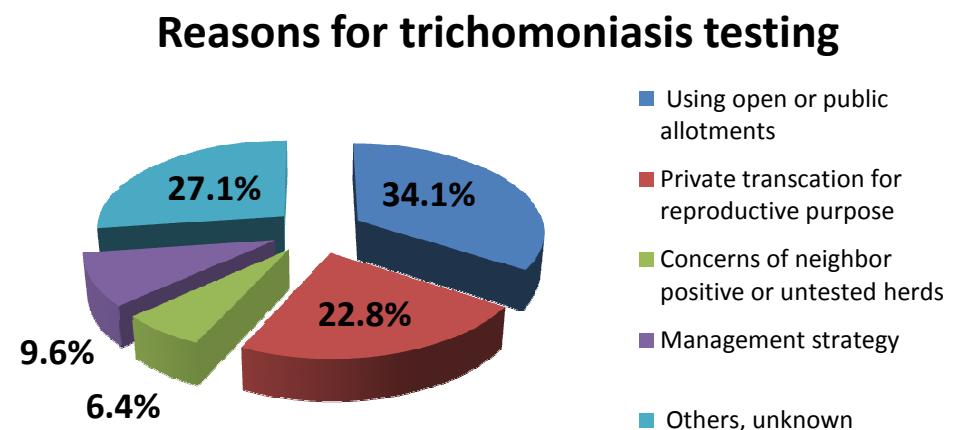

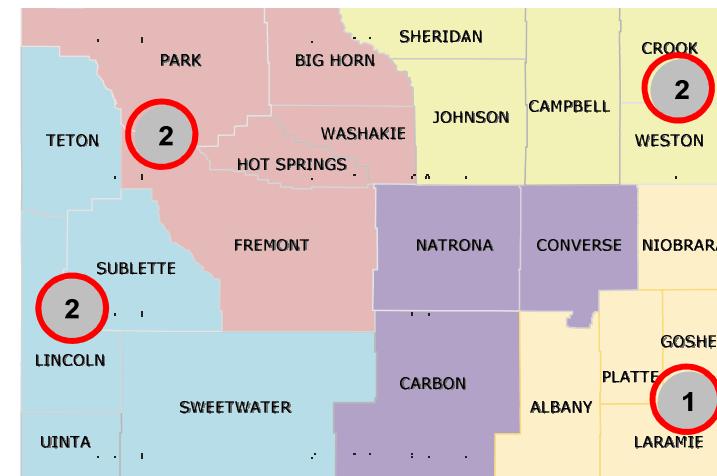

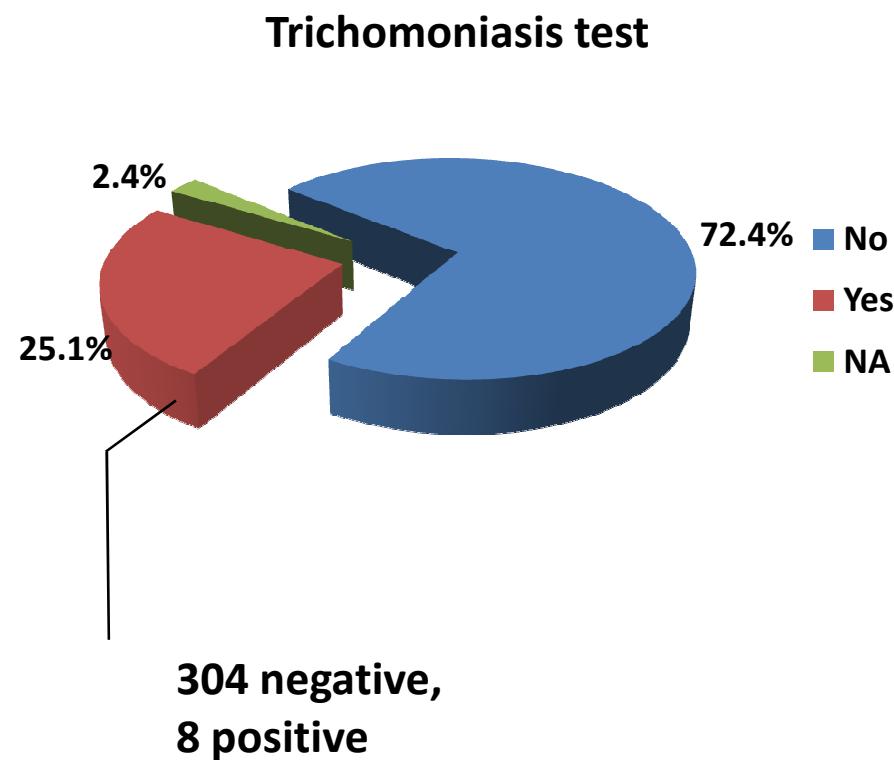

($\chi^2=7.860, p<0.05$)

Represents bigger sized herds (cow number ≥ 50)

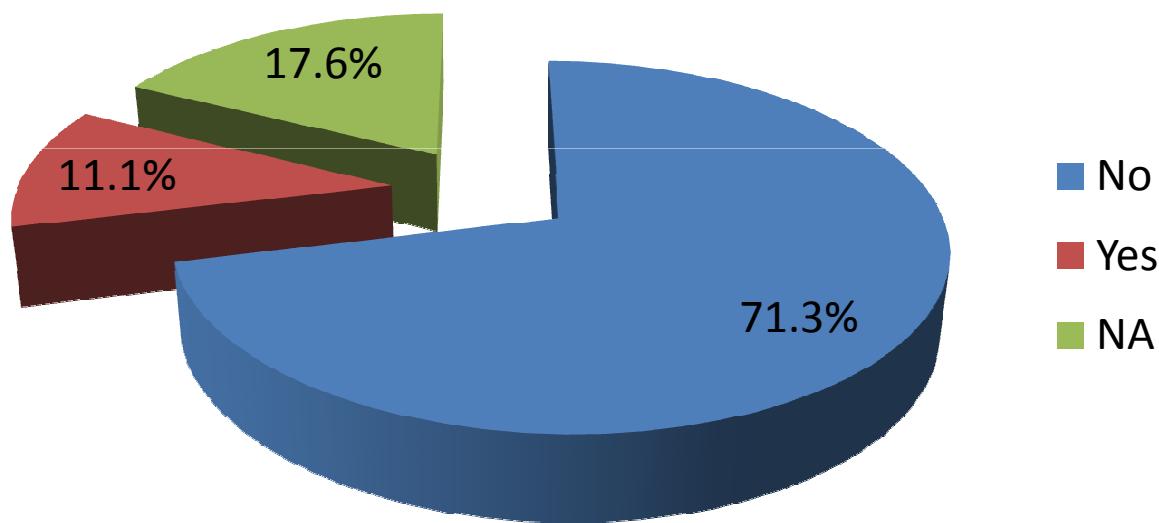

Producer's awareness of bovine trichomoniasis

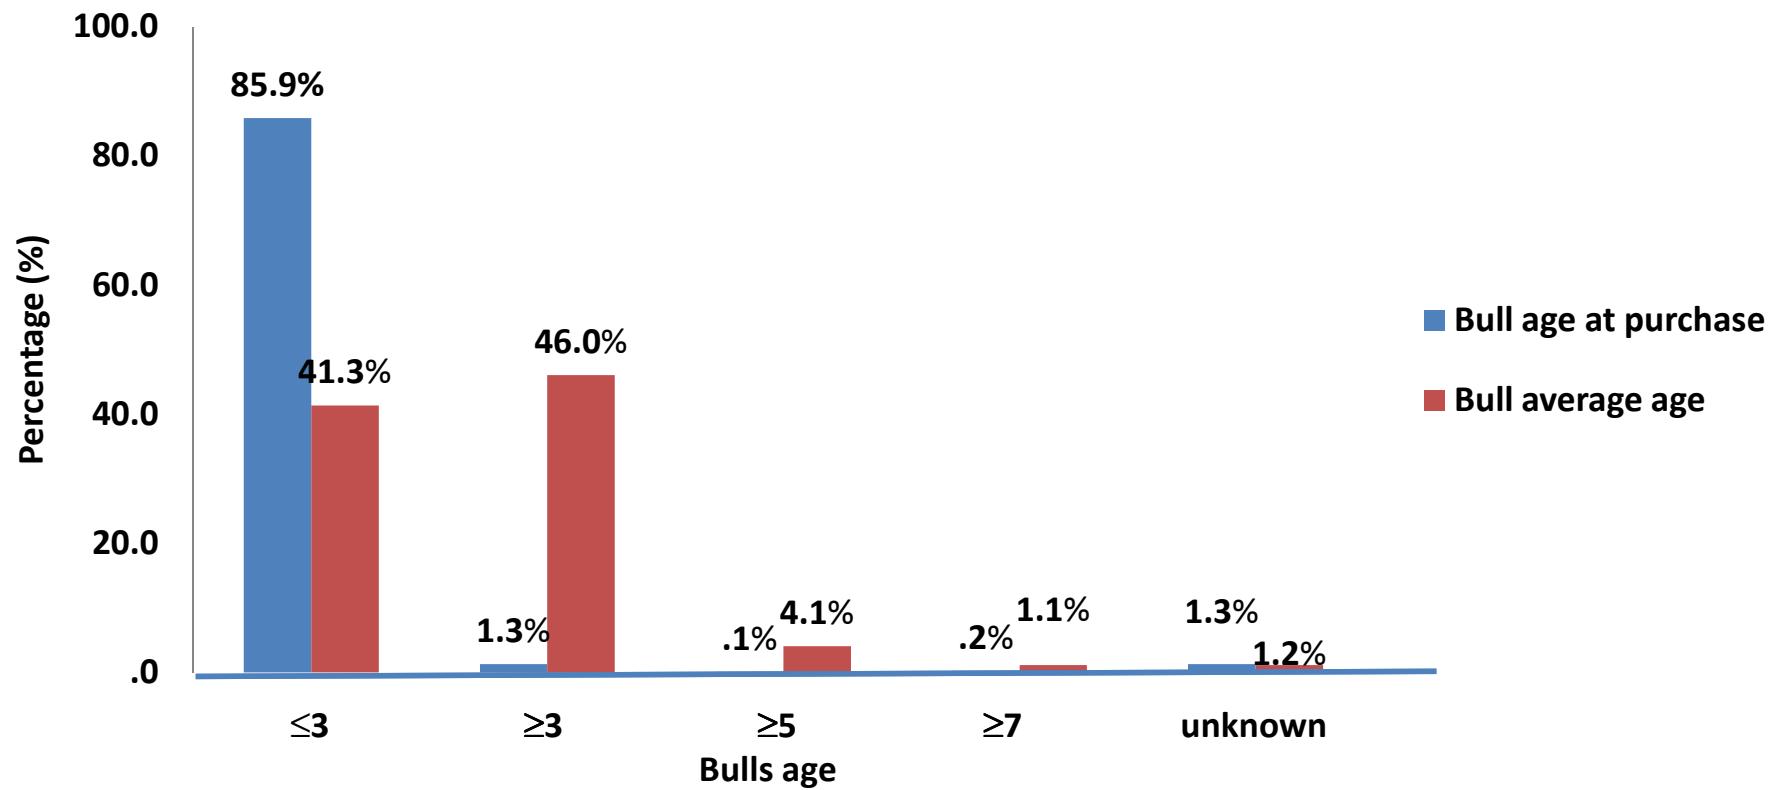

Trichomoniasis testing

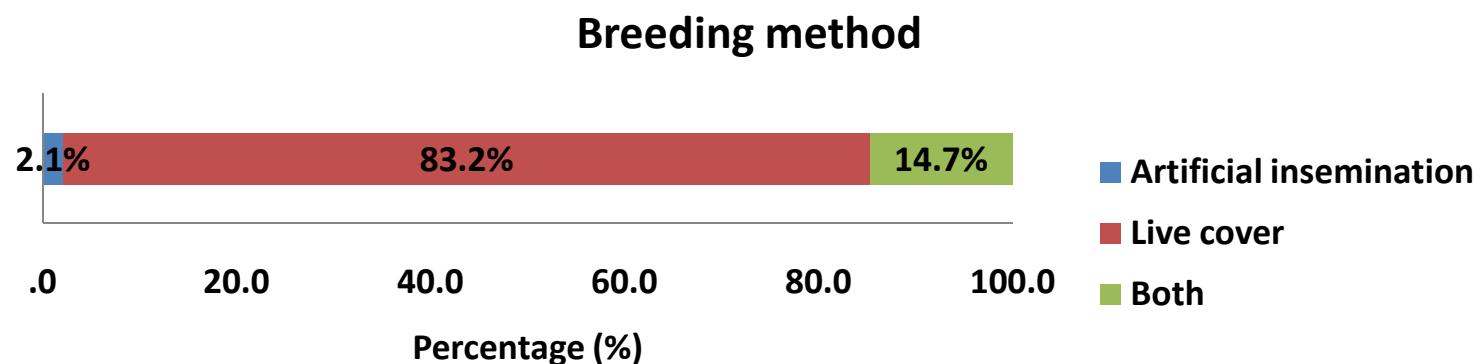

T. foetus Vaccination

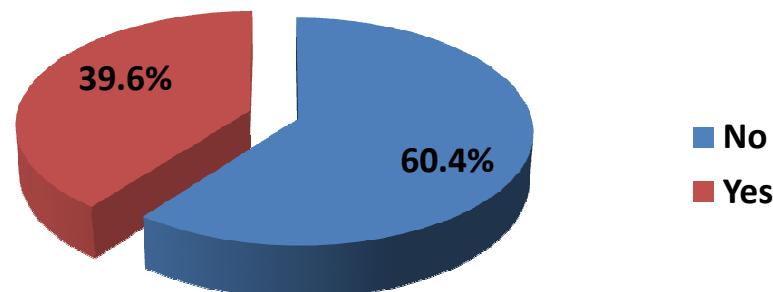

Average bull age

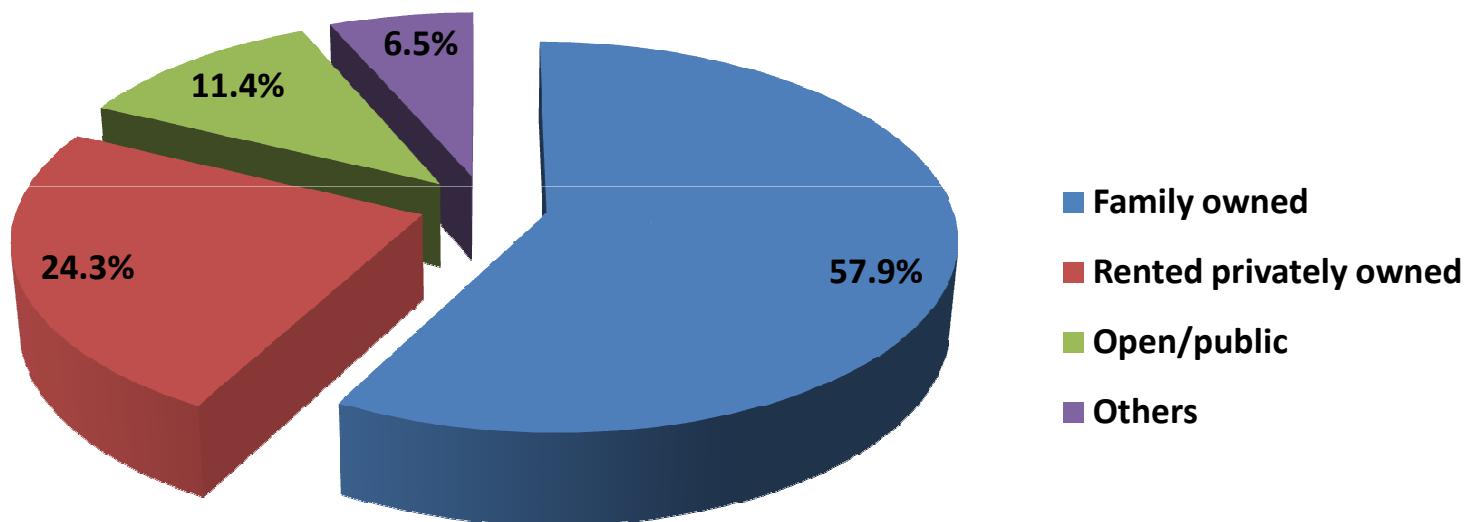

Breeding source

Consideration of AI

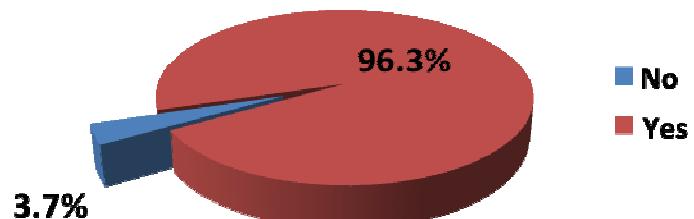

Allotment type

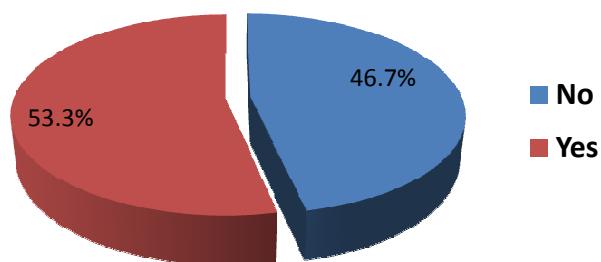

Fencing

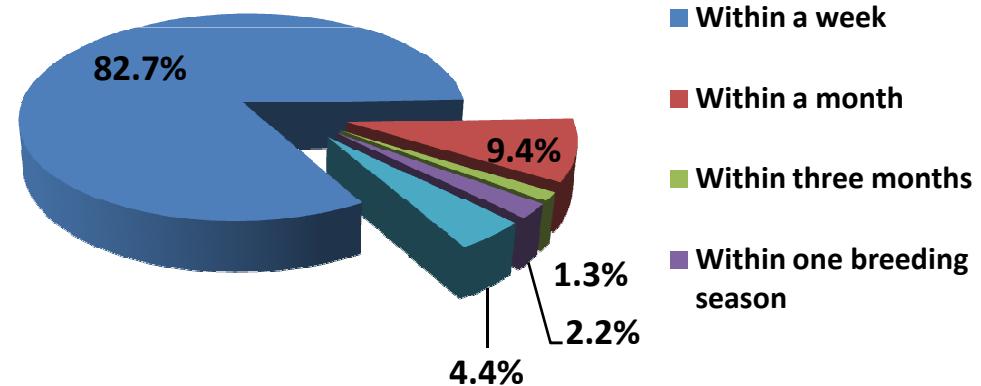

Allotment fencing

Broken fences

Time for get broken fences fixed

Risk factors associated with bovine trichomoniasis

Neighboring a positive herd(s)

- $p=0.0003$
- OR=18.3 (4.1-81.1)

Using public allotment

- $p=0.003$
- OR=2.9 (0.7-12.1)

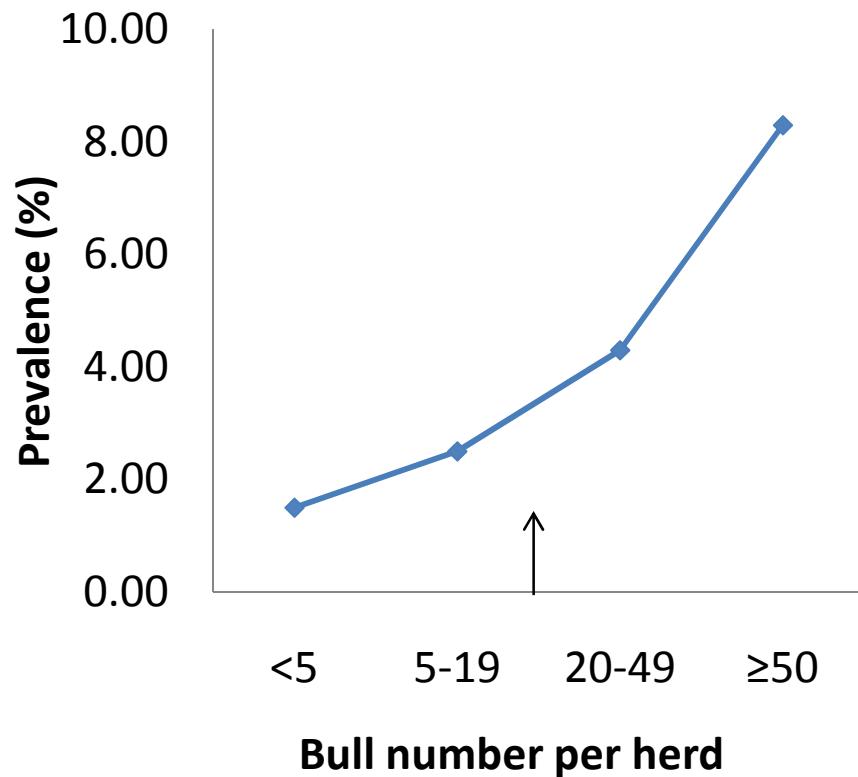

Comingling with neighbor herd(s)

- $p=0.026$
- OR>999.99

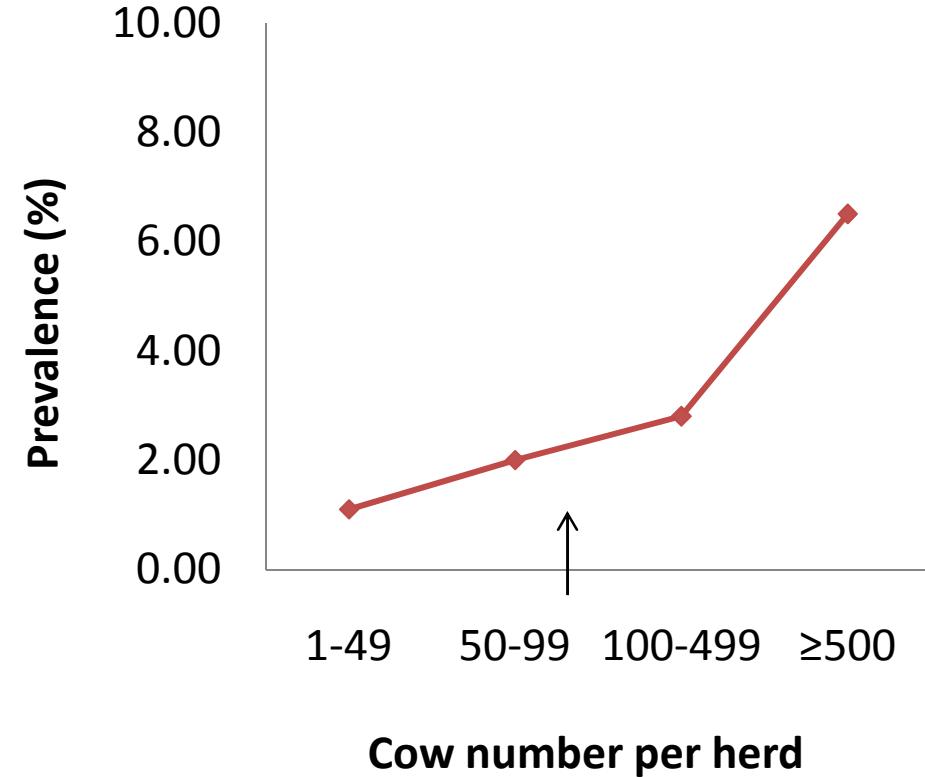

Elapsed time to fix broken fence(s)

- $p=0.078$
- OR=4.3 (0.9-20.2)

Herd sizes and infection chance

$$\chi^2 = 1.834, p=0.18$$

$$\chi^2 = 1.266, p=0.30$$

Conclusion

Build good fences

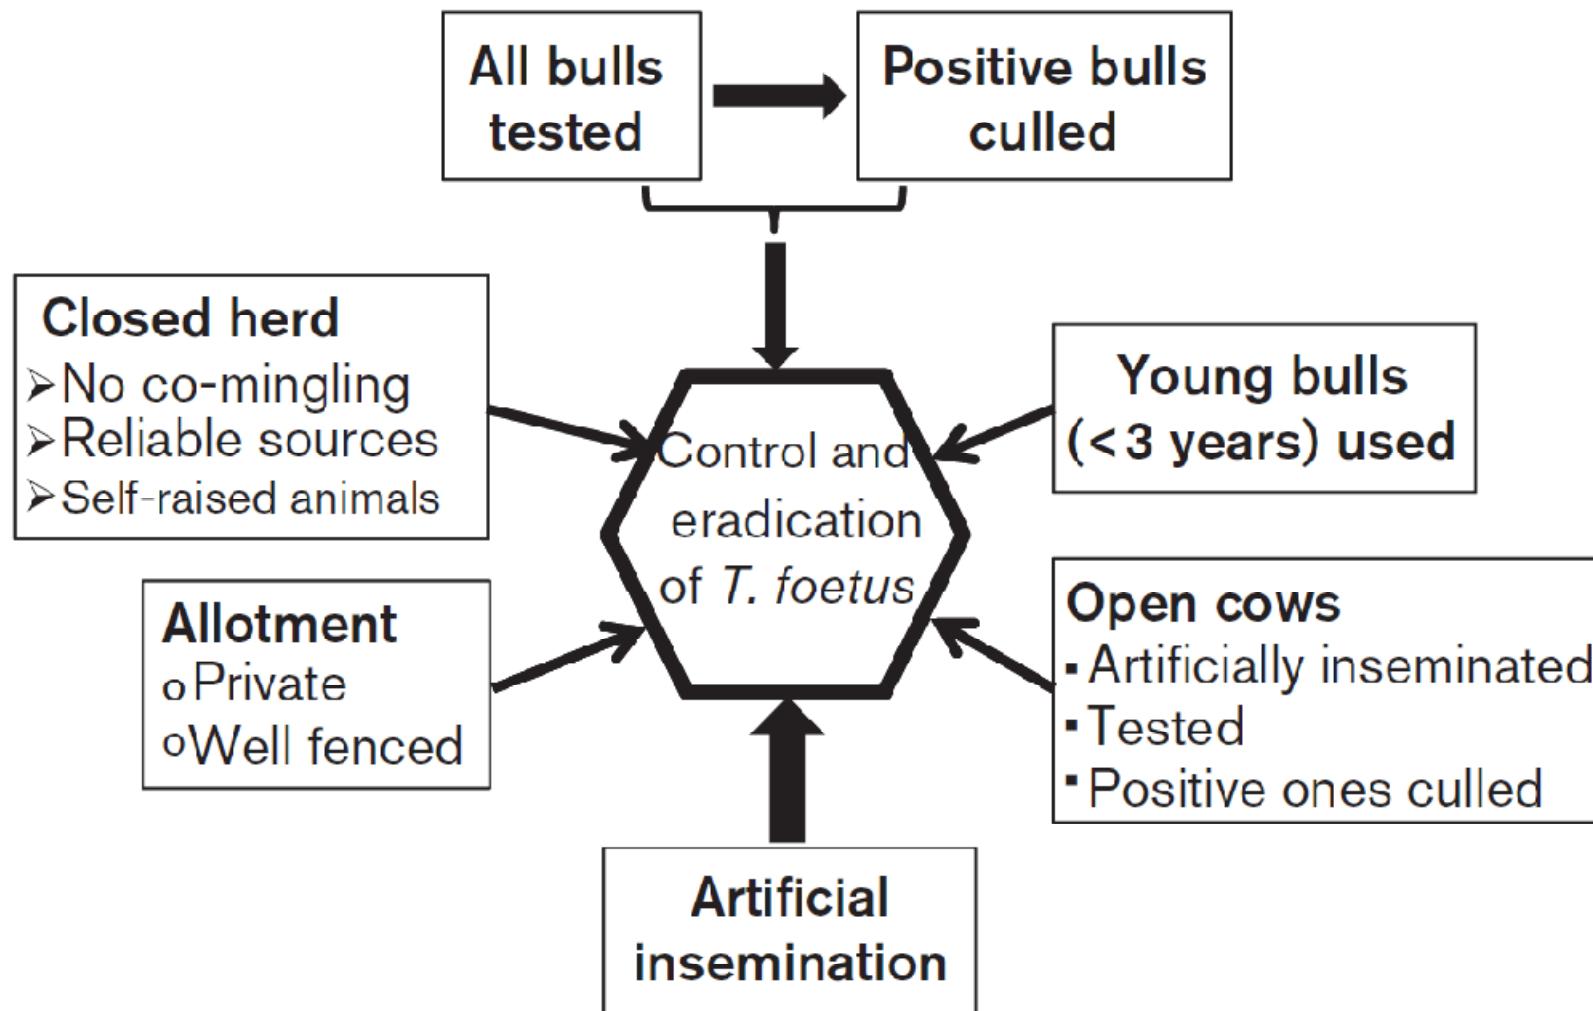

**Check and fix
fences regularly**

**Allotment
management**

**Prevent
comingling with
other herds**

**Use private
allotments**

A comprehensive approach to control and eradicate bovine trichomoniasis
