St. John's Medical College
Bangalore, India

Introduction

- India - Diabetes capital in the world
- 63million diabetics in India
- 30% require insulin**
- Early initiation of insulin in routine diabetes care is beneficial
- Insulin therapy presents with many challenges due to the complexities associated with use
- sufficient knowledge can achieve a good glycaemic control

*WHO/IDF

**Robb A et al.

□

Objectives

- To study the Knowledge and practices regarding insulin usage among patients with Type 2 diabetes in a tertiary care hospital in South India

Methodology

- Study design: Cross sectional
- Study duration: 1st April to 30th June 2016
- Study population: Patients with type 2 diabetes on insulin.

- **Inclusion** Criteria: Adult patients (>18yrs) who were on Insulin therapy.(Out Patients or Inpatients)

- **Exclusion** Criteria:GDM and Terminally ill excluded

Methodology

- Sample size = 100 patients
[$p = 53$, $\alpha = 5\%$, $d=5\%$:]
- Ethical clearance St. John's Medical College
Institution Ethics Committee (IEC Study Ref. No.
IEC/123/2016).
- Written informed consent
- Structured interview schedule – 4 sections
 - Socio-demographic details
 - Insulin use
 - Technique
 - Disposal

**Germer et al*

Data management

- Scoring
 - Total score = 11
 - Score ≥ 8 Adequate practice
- Data entry – Microsoft Excel
- Data analysis – SPSS Version 16
- Descriptive statistics – proportions, mean & standard deviation, details of insulin use
- Analytical statistics – Chi Squared test of association
- Statistical significance at p value of < 0.05

Age & gender distribution

GENDER/AGE

N=100

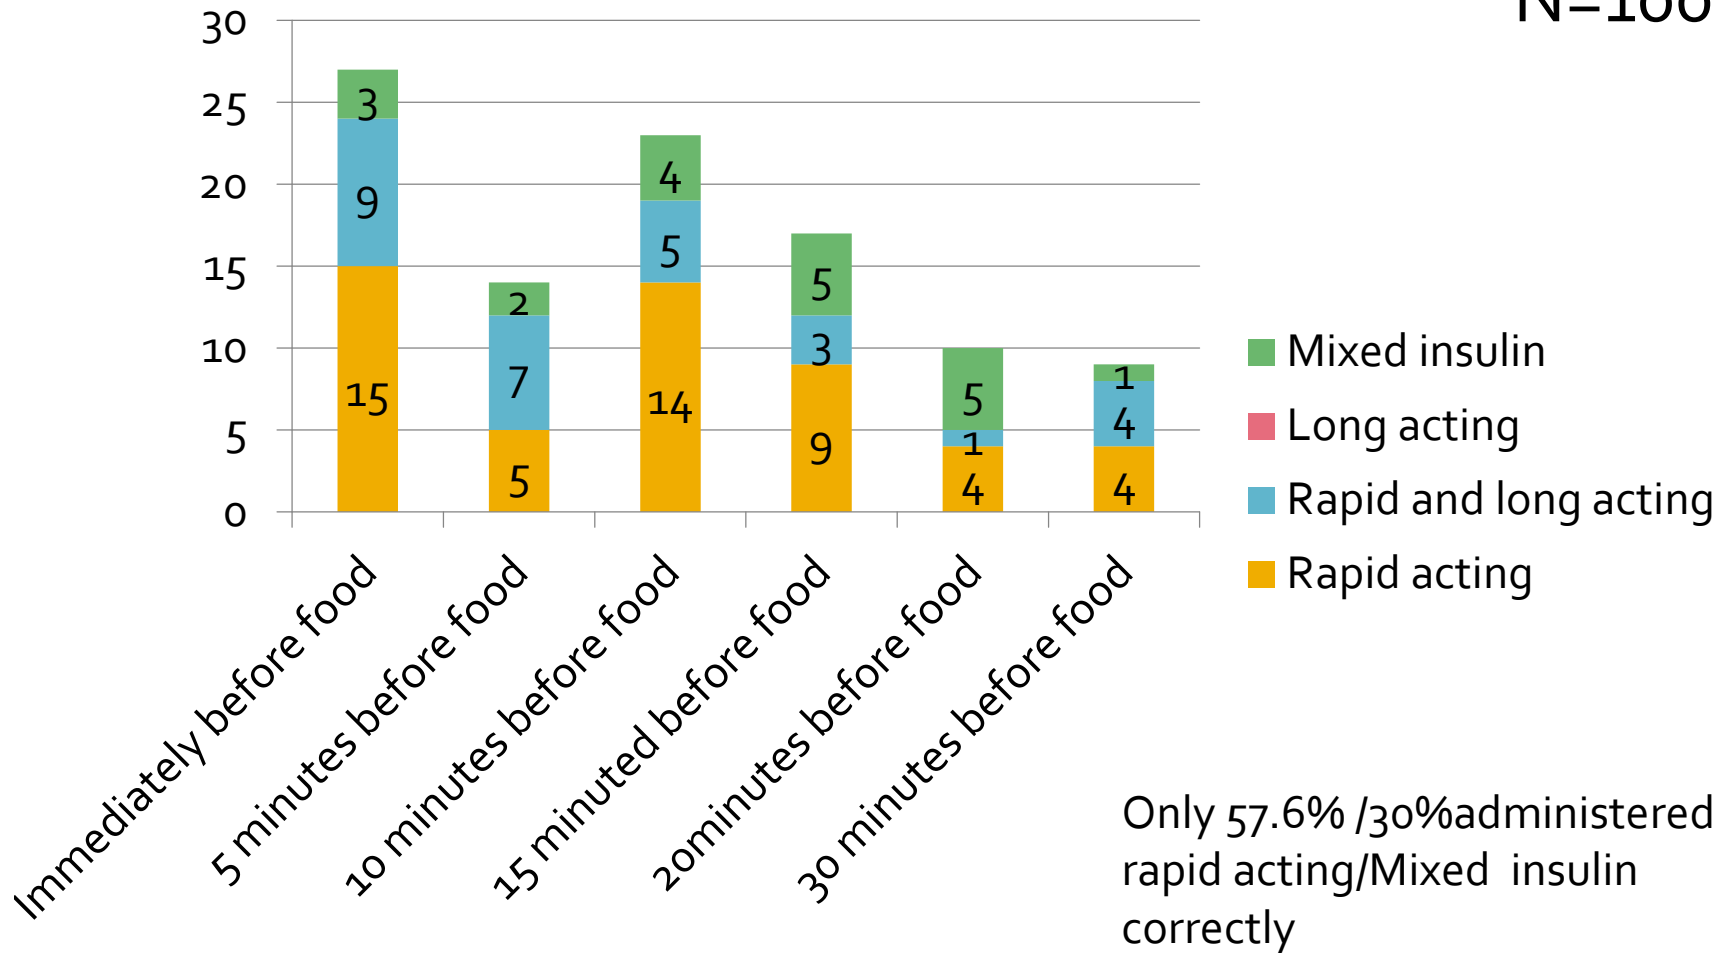

Practices regarding insulin use

■ Regular /rapid acting insulin	51%	N=100
■ Regular timing of insulin use	91%	
■ Stored insulin in refrigerator	81%	
■ Used insulin pens	18%	
■ Self Administration	55%	
■ Alternate the site of injection	84%	
■ Reuse of needle >5 times	42%	

Relationship of insulin with meals

N=100

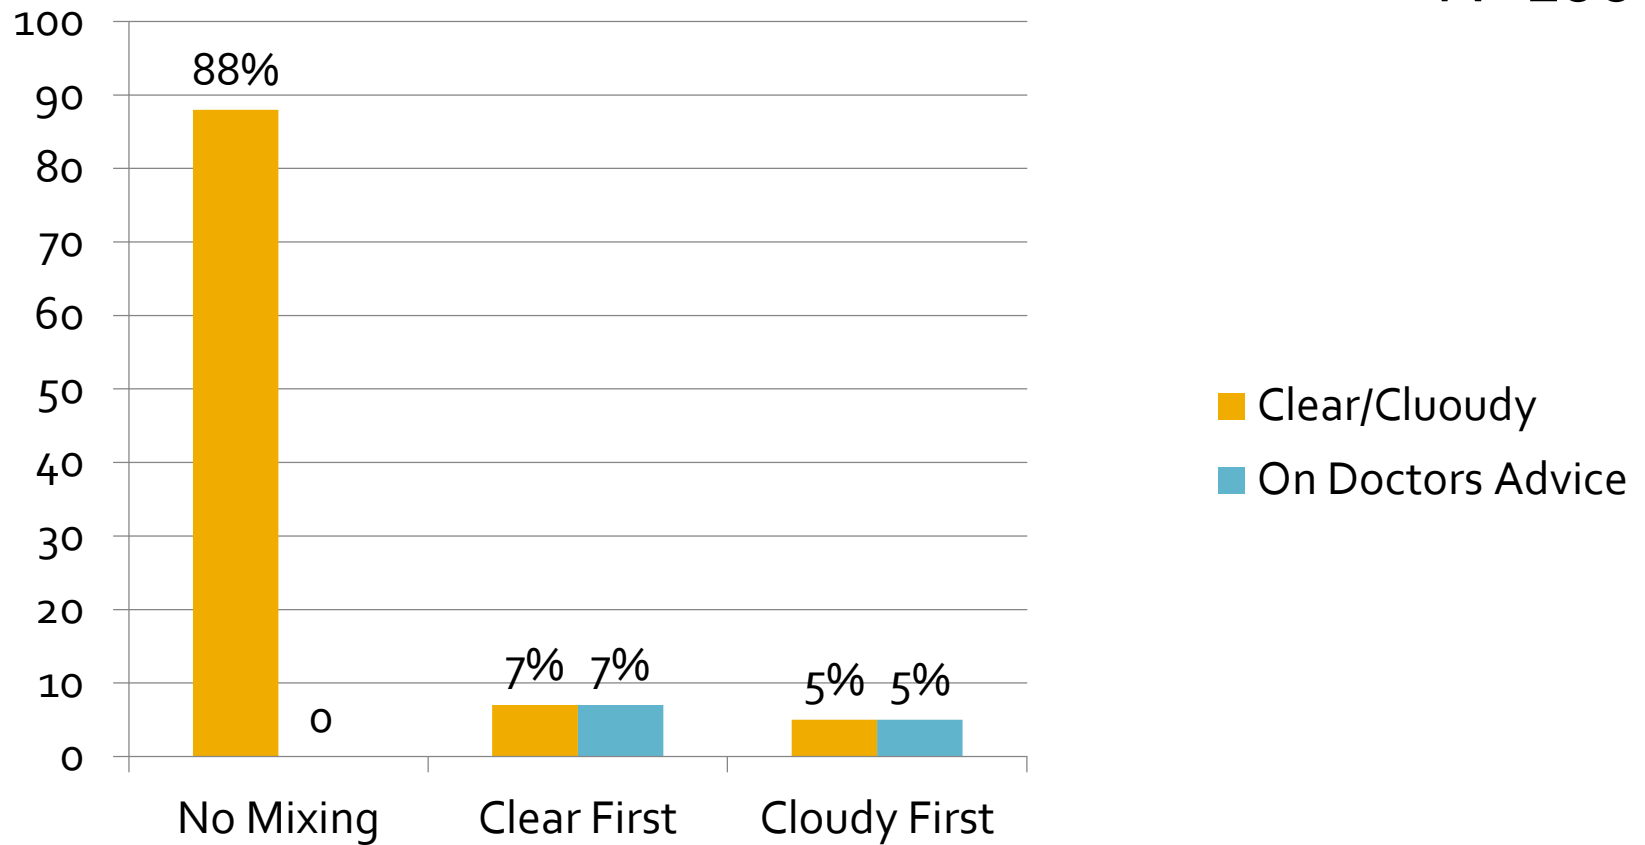

Practices regarding insulin technique

Checked potency	61%
Checked expiry date	85%
Shake vial before use	65%
Clean injection site	47%
Take a skin pinch	73%
Inject at 90 degrees	72%
Wait for 10 seconds before withdrawing	35%
Bring to room temperature before injecting	65%
Site of injection -abdomen	28%

Mixing of insulin

N=100

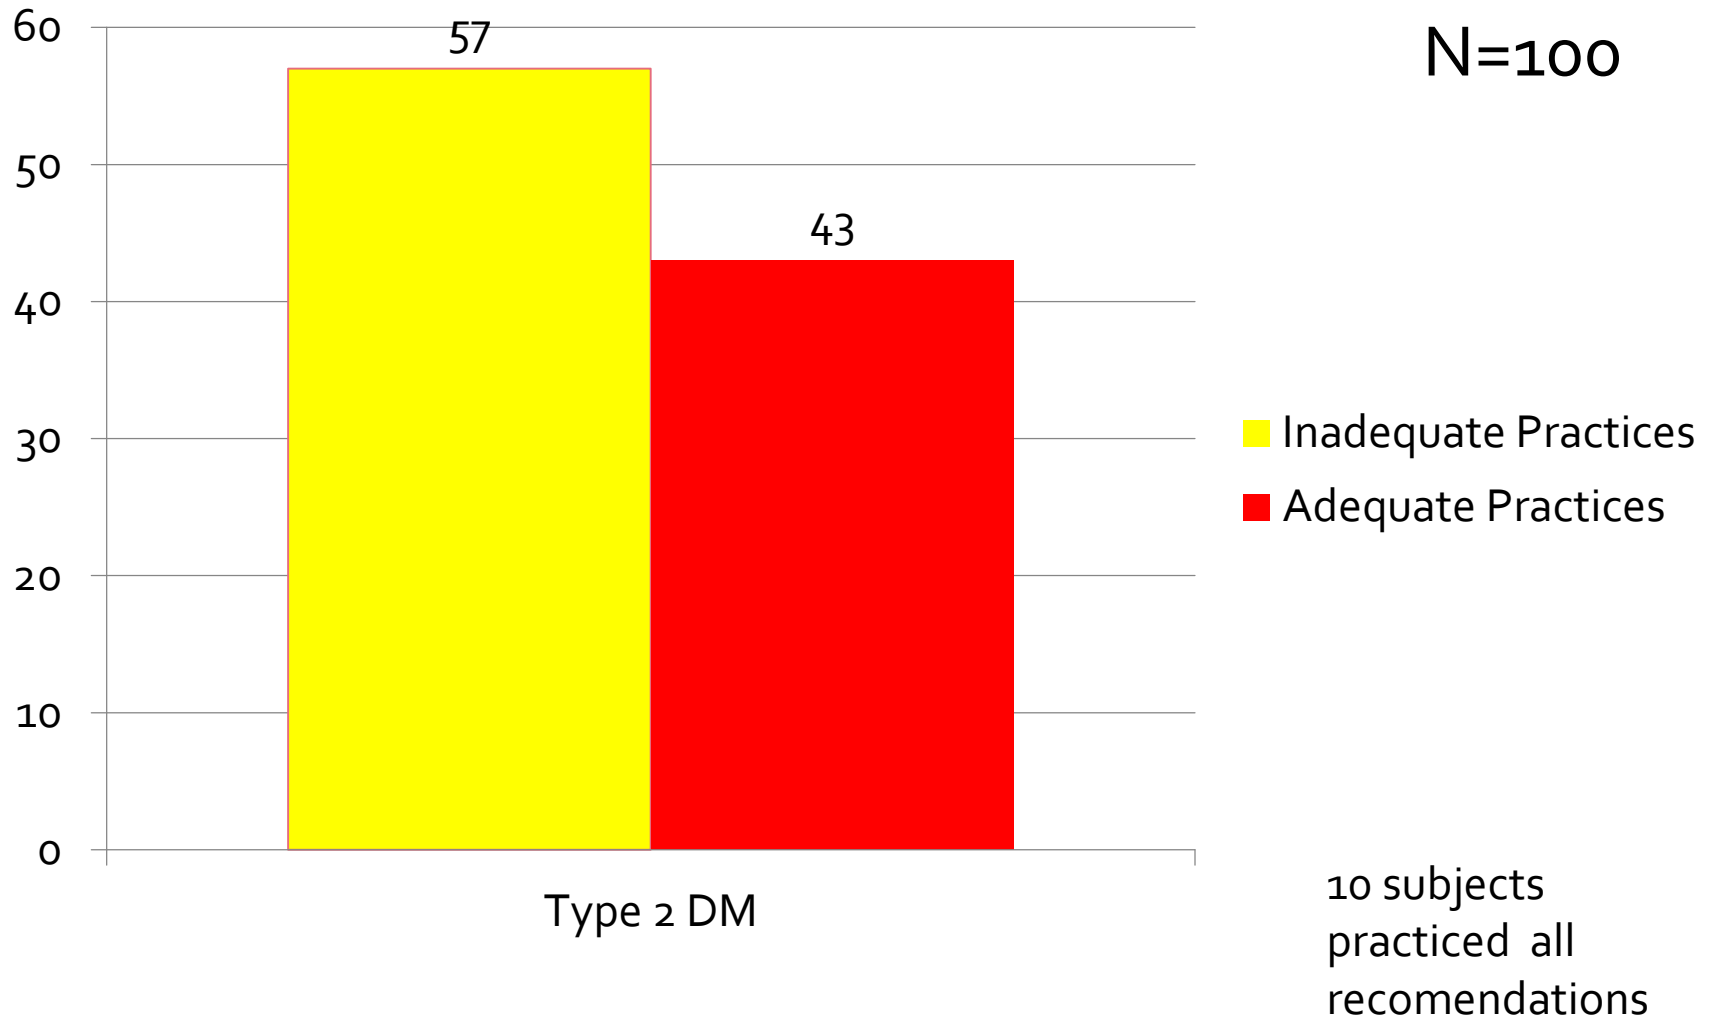

Disposal of needle

N=100

Adequate practices

Gender and adequate practices

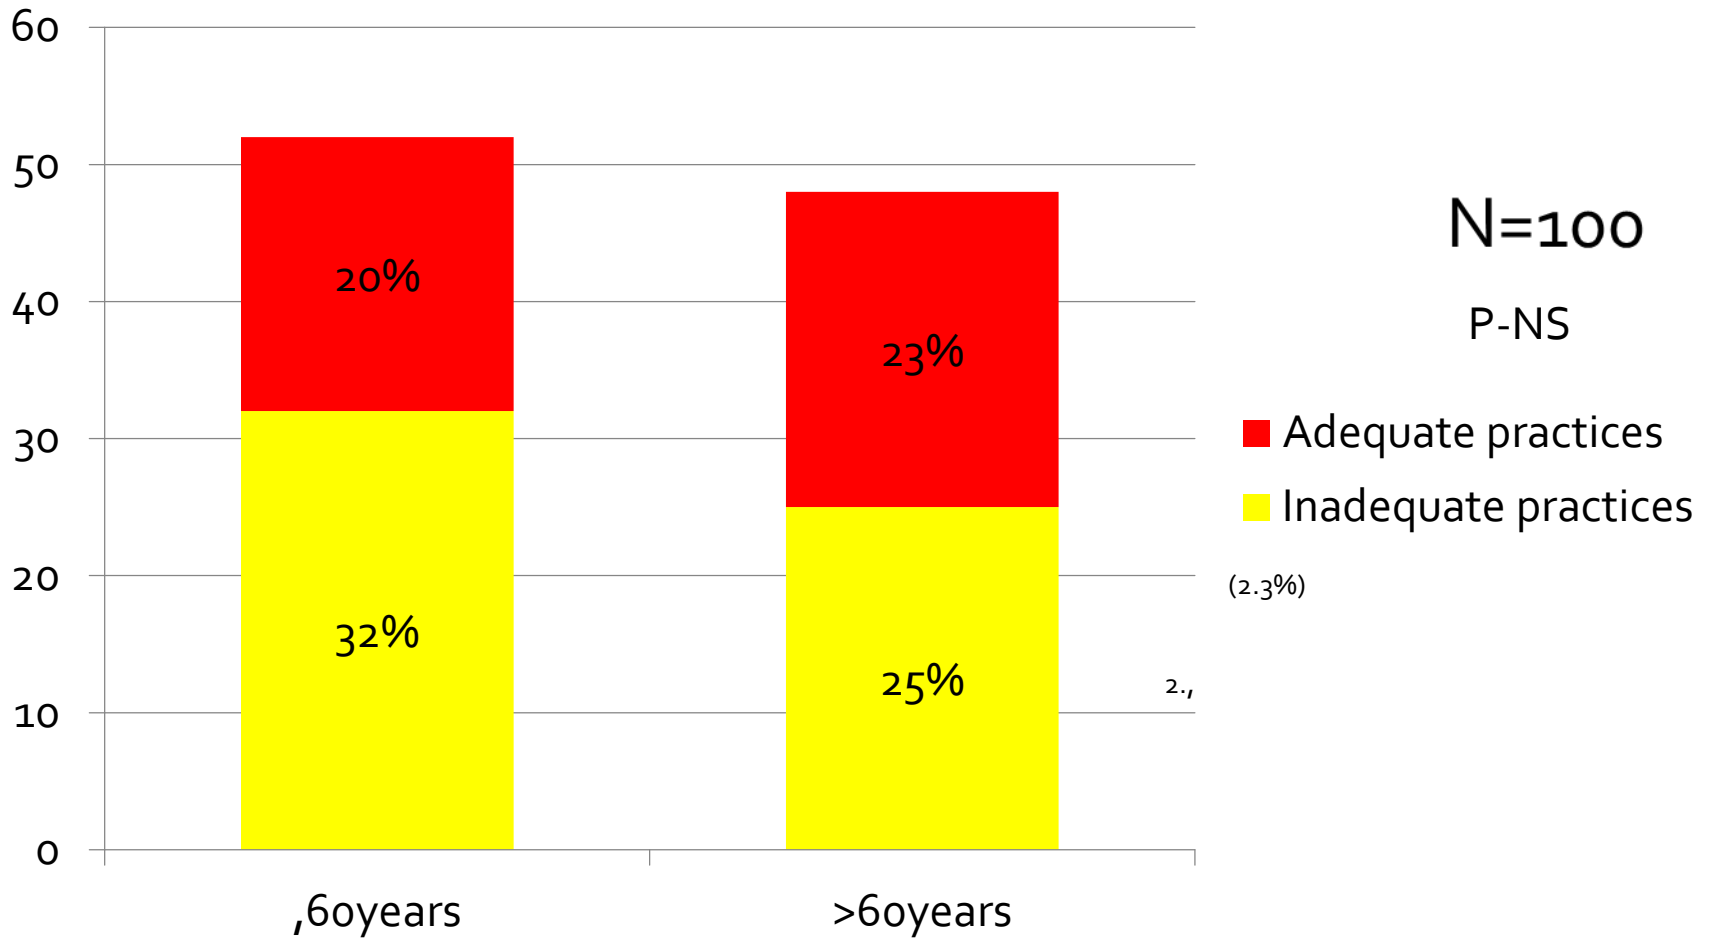

N=100
P:NS

Education And Practices

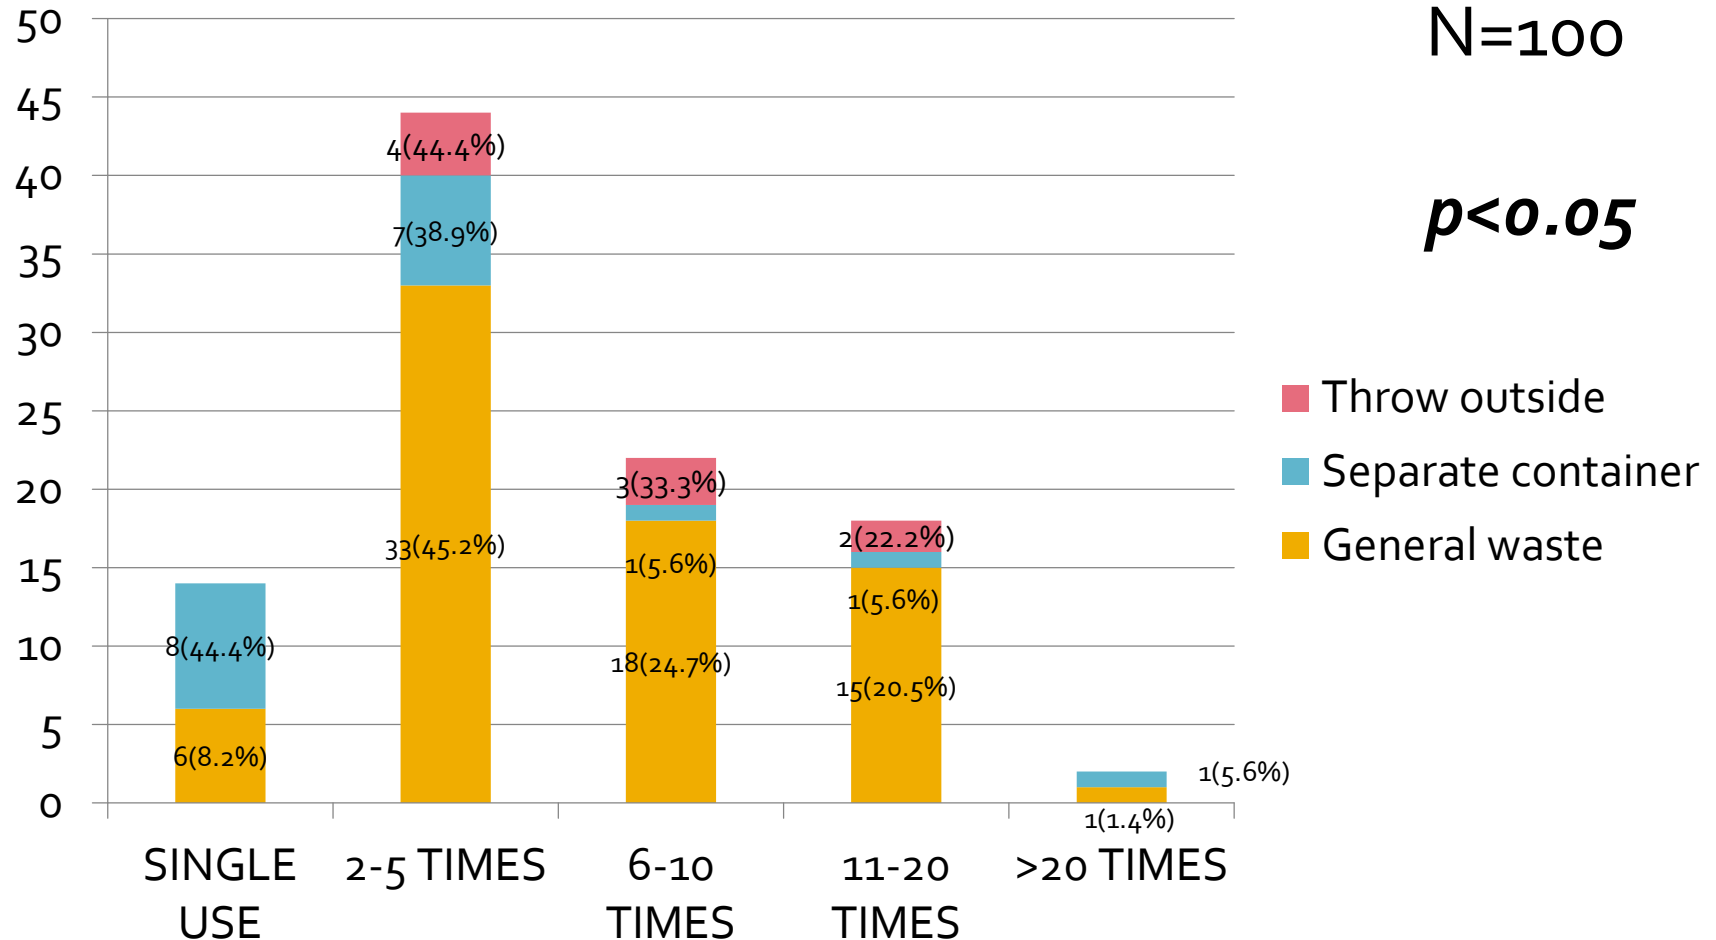

Age Insulin use and Inadequate Practices

Duration Of Insulin Use and Adequate Practices

Number of times of use & disposal of needle

Storage of insulin & bringing to room temperature before use

Bringing to room temperature before use	Refrigerator	Other	Total (N)	p value
Yes	58(71.6)	7(36.8)	65	$X^2= 21.3$
No	23(28.4)	12(63.2)	35	$p=0.004$
Total	81	19	100	

Parameters	1999-2000	2008-2009	2014-2015 (worldwide ITQ- Anders H et al)	Indian injection technique study(Kalra S et al 2015-2017)	Our study
N (total No.)	1002	4352	13289	1011	100
Mean age	47	48.4	51.9	51.1	59.7
Duration of therapy(mean)	14.7	13.9	13.2	5.3	12.02
Using pens%	78.8	92.3	89.6	55	18
Using 8mm needles%	55	48.6	29.2	15.9	88
Site%					
i) Abd	85	88	90.9	38.1	28
ii) Abd+thigh				30.7	13
iii) Abd+arm				5.3	12
iv) Abd+thigh +arm				8	11
v) Thigh	69	59	43	83	8
vi) Buttock	24	16	13.8	1.7	0
vii) Arm	34	29	31.9	4	20
Skin pinch%	69.4	72.9	63.7	79.6	73

parameters	1999-2000	2008-2009	2014-2015 (worldwide ITQ- Anders H et al)	Indian injection technique study(Kalra S et al 2015-2017)	Our study
Inj. 90' %				84.9	72
Rotation of inj. site %	38	91	83.9	–	84
Single needle use%	3.3	3.6	–	–	6.3
Needle used directly into trash%	47	38	55	57	73
Disposal - separate container%	–	–		9.8	18
Wait for 10 sec			29.3	31.8	35
Reuse needle i) <5 time ii) 6-10 time iii) >10 time				74.4 16.1 9.5	58 22 10

Conclusion

- Practices regarding insulin administration were unsatisfactory (57%) in the study population
- Age, gender, education, duration of insulin use are not significantly associated with correct insulin use practices
