

Functional Respiratory Imaging (FRI) to assess the bio- equivalence of inhaled medication

Jan De Backer, MSc, PhD, MBA
CEO

BABE 2014

- **Functional Respiratory Imaging (FRI)**
 - FRI outcome parameters
 - Added value in drug and device development
- **Bio-equivalence**
 - Salmeterol/Fluticasone branded vs generic in asthma
 - Salbutamol vs Ipratropium Bromide in COPD
- **Conclusions**

CHALLENGES IN RESPIRATORY DRUG DEVELOPMENT

**Limited sensitivity of current Pulmonary Function Tests
(FEV₁,...)**

Very difficult to demonstrate efficacy of novel compounds,
resulting in **high number of patients needed in clinical trials**

**Excessive respiratory drug
development cost > \$1.5 billion**

**Difficult to demonstrate bio-
equivalence**

- Explain Functional Respiratory Imaging (FRI)
- Demonstrate enhanced sensitivity wrt PFT
- Reduction in # patients required for clinical trials to understand mode of action
- Use clinical trials as a design tool in phase I and II
 - To assess bioequivalence
 - To de-risk phase III

IMAGING BIOMARKERS

- FRI is an imaging biomarkers for respiratory diseases
 - What are imaging biomarkers?

According to Wikipedia:

“A biomarker, or biological marker, generally refers to a **measured** characteristic which may be used as an indicator of some **biological** state or condition.”

PROJECT OUTLINE

- double blind, double dummy, randomized, two-way cross-over study
- compare the effects of
 - TEST = Seretide[®] Evohaler (supplied by Allen & Hanburys, UK)
 - REFERENCE = generic salmeterol/fluticasone HFA pMDI (manufactured by Cipla Ltd, India)
- functional respiratory imaging parameters
- in 16 asthmatic patients

- **Primary:**
To evaluate the effect of both study drugs under investigation on FRI parameters and to evaluate the particle deposition in the lungs using CFD.
- **Secondary:**
To assess the effect of salmeterol and fluticasone combination therapy on lung function (spirometry and body plethysmography), on exercise capacity (6MWT) and on dyspnea (Borg CR10 Scale and VAS dyspnea). Furthermore the safety of the 2 study drugs under investigation will be evaluated through monitoring of AEs throughout the study.

CLINICAL STUDY DESIGN

DATA COLLECTION

- CT scans:
 - Pre-dose: FRC and TLC
 - Post-dose: TLC
- Inhalation profile:
 - Calibration of respiration belts with pneumotach
 - Measurements during actual inhalation of study drug
- Pulmonary function tests:
 - Spirometry
 - Body plethysmography
 - Exercise tolerance
 - Dyspnea

INHALERS

- Pre-dose/post-dose LA airway models
 - Airway volumes (iVaw)
 - Airway surface area (iSaw)
 - Airway resistance (iRaw)
- Pre-dose internal airflow distribution
 - For CFD boundary conditions
- Pre-dose coupled UA/LA/inhaler models for particle deposition simulations
 - Regional deposition of inhaled compounds

- Pre-dose/post-dose LA airway models

V2_pre

V2_post

V3_pre

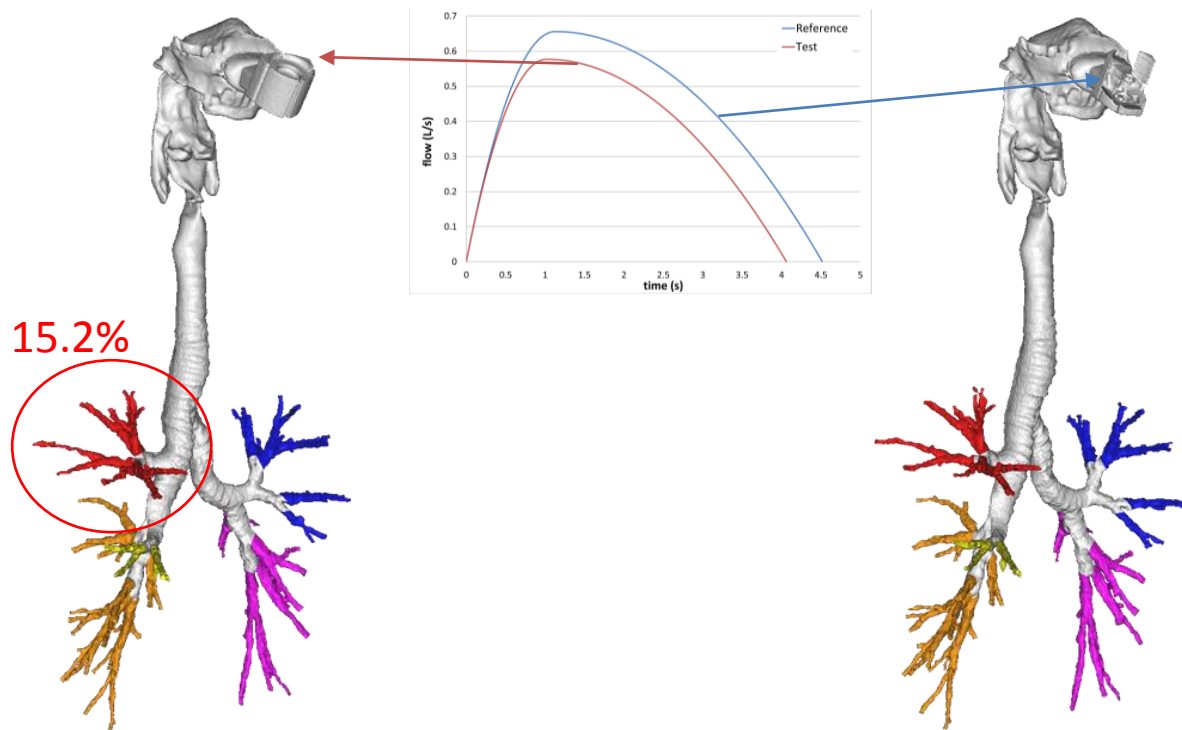

V3_post

- Baseline stability, drug effect, effect comparison

- Pre-dose internal airflow distribution
 - For CFD boundary conditions

- Pre-dose coupled UA/LA/inhaler models for particle deposition simulations
 - Regional deposition of inhaled compounds

- Pre-dose coupled UA/LA/inhaler models for particle deposition simulations
- ACI data was used for particle diameter distribution of TEST and REFERENCE

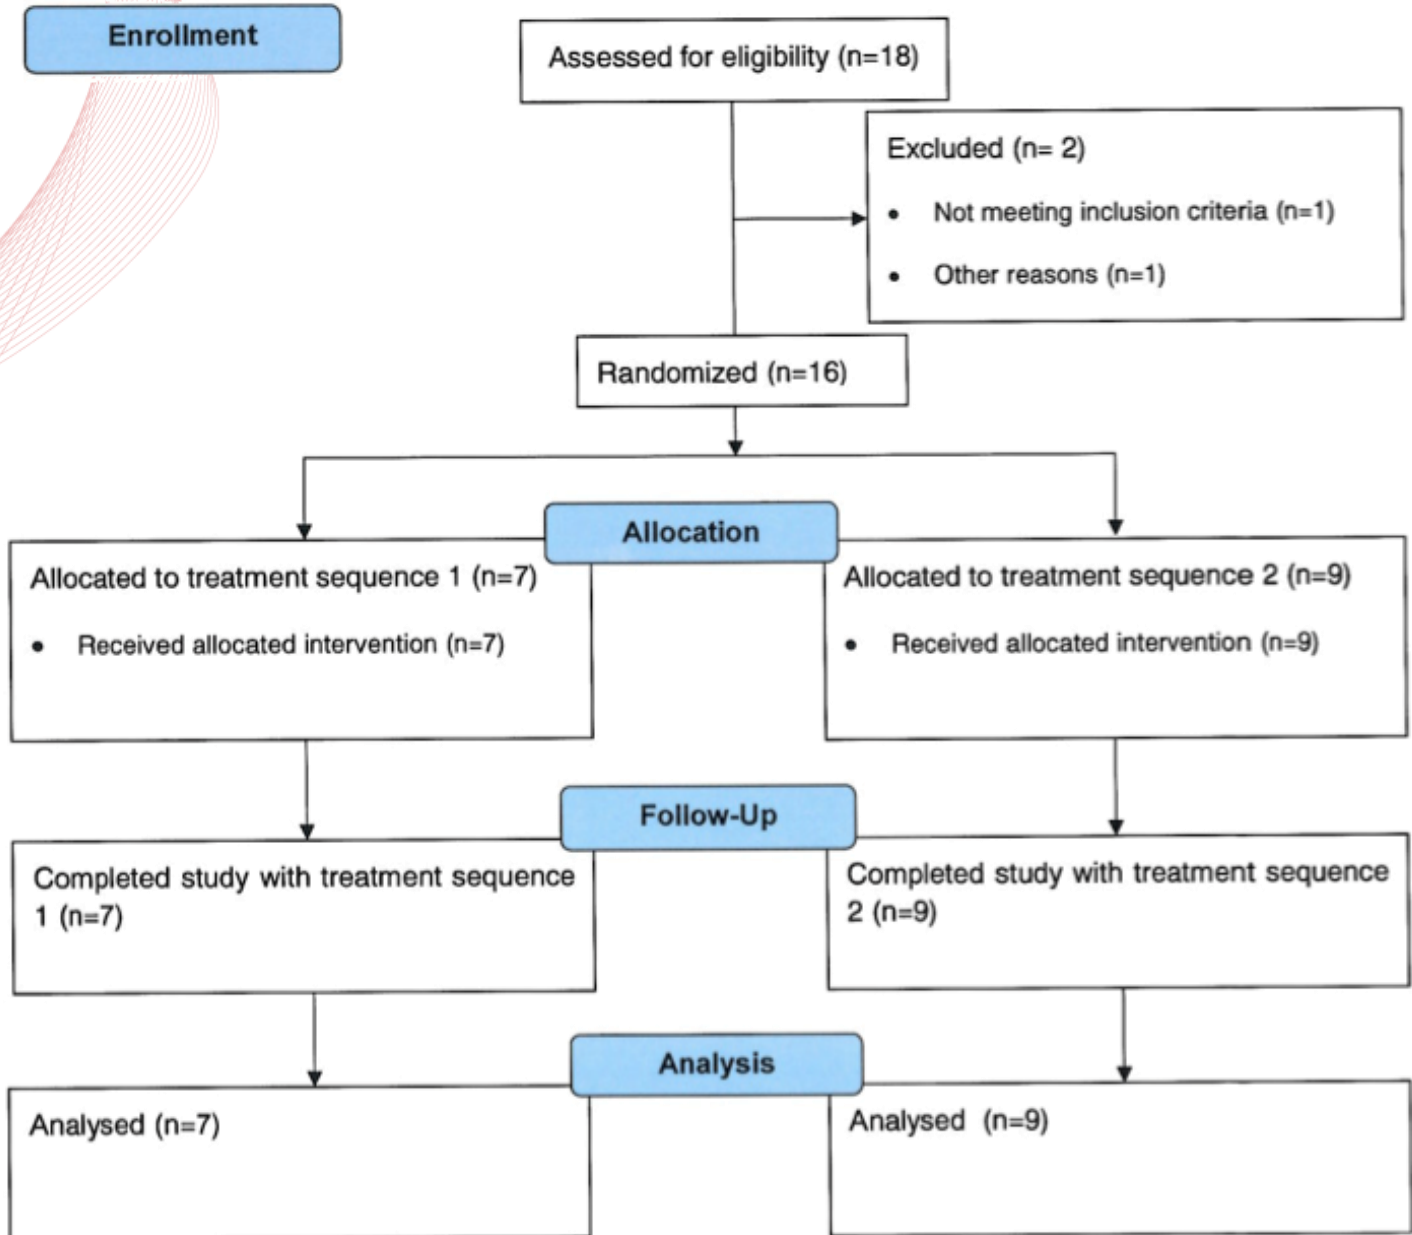

- Pre-dose coupled UA/LA/inhaler models for particle deposition simulations
 - Regional deposition of inhaled compounds

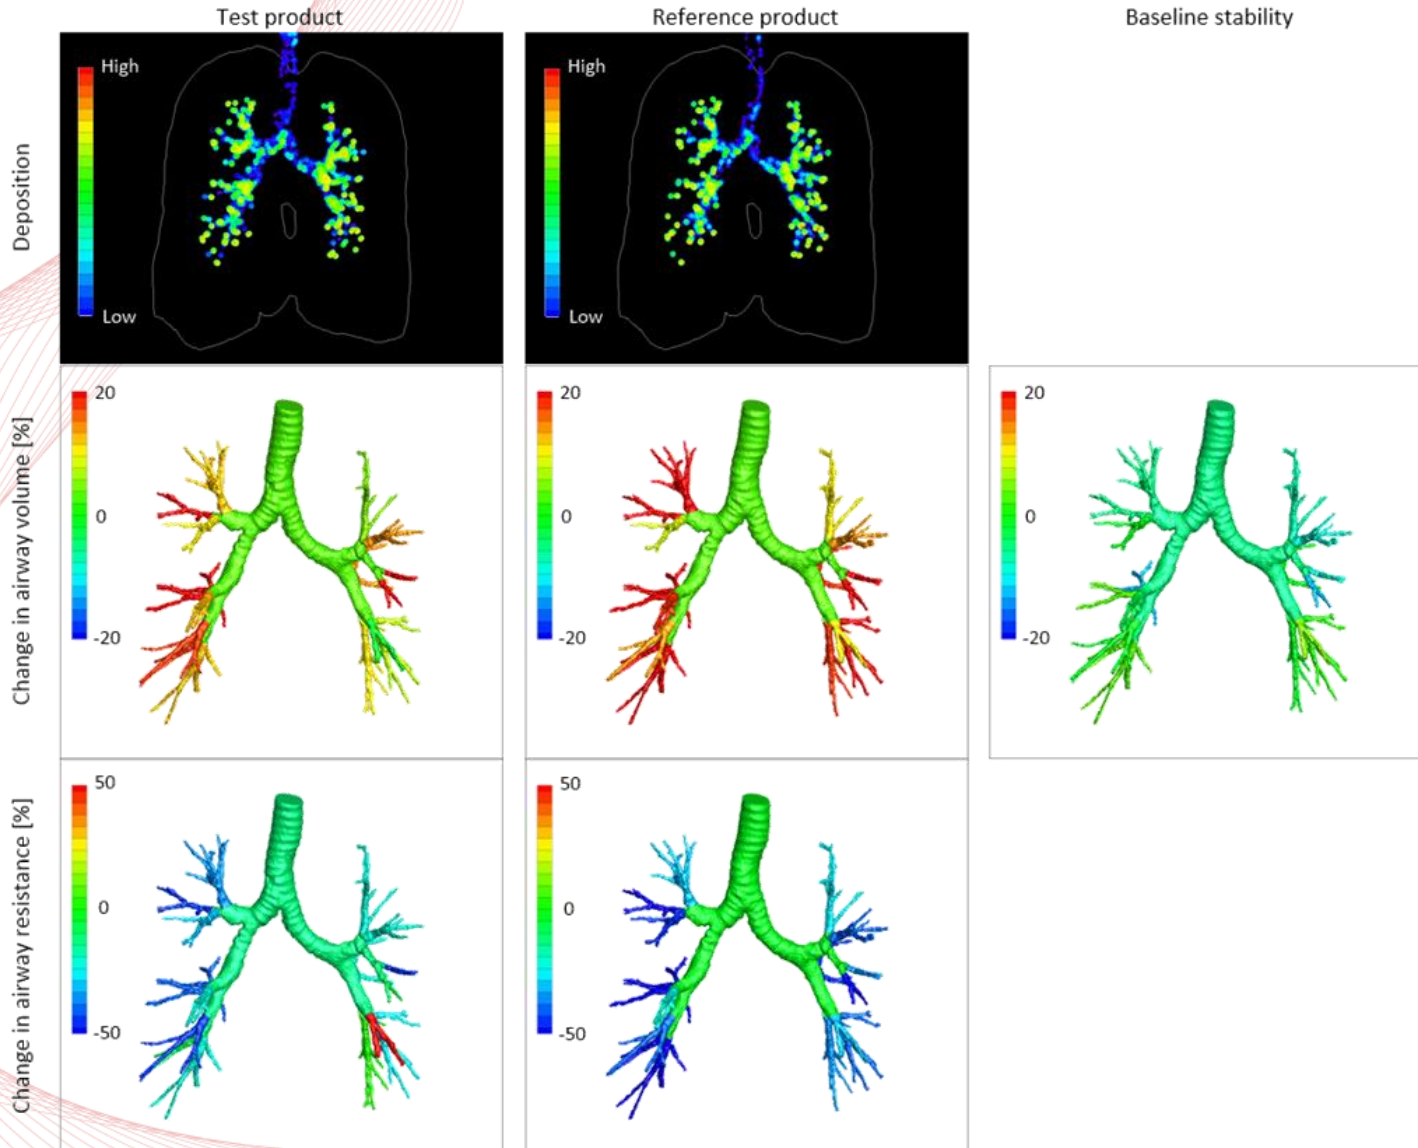

- To assess whether products are different
 - Wilcoxon matched pairs to assess drug effect
 - Mann Whitney U test to compare drug effects
 - $p < 0.05$ for significance
- To assess whether products are equivalent
 - Two one-sided tests
 - 90% confidence interval of Test/Reference ratio
 - Between 80%-125% bounds

IN- AND EXCLUSION CRITERIA

- Inclusion
 - Diagnosed asthma
 - Treated according to GINA guidelines
 - Non or ex-smokers (stopped <1y and <10y total packyears)
- Exclusion
 - Exacerbation during last 8 weeks
 - COPD
 - Upper or lower airway infection
 - Received oral corticosteroids in the last 4 weeks

- Seretide FS and Cipla FS are not significantly different
- Are they equivalent?
 - Transform parameters to normal distributions (when needed)
 - Determine 90% CI
 - Assess whether 90% CI lies within 80%-125% bounds
 - Case 1: Atrovent vs Ventolin
 - Case 2: Seretide FS vs Cipla FS

ATROVENT vs VENTOLIN

- Assess acute effect of **Salbutamol** (Ventolin) in comparison with **Ipratropium Bromide** (Atrovent)
- Prospective cross over study
- 6 COPD patients
- 400 microgram Ipratropium Bromide / 80 microgram Salbutamol
- Are these products equivalent according to different parameters?

De Backer LA, Vos WG, De Backer JW, Devolder A, Verhulst SL, Claes R, Salgado R, Germonpré PR, De Backer WA

The effect of salbutamol in comparison with ipratropium bromide on central and peripheral airways in COPD

Int J Chron Obstruct Pulmon Dis. 2011;6:637-46.

ATROVENT vs VENTOLIN

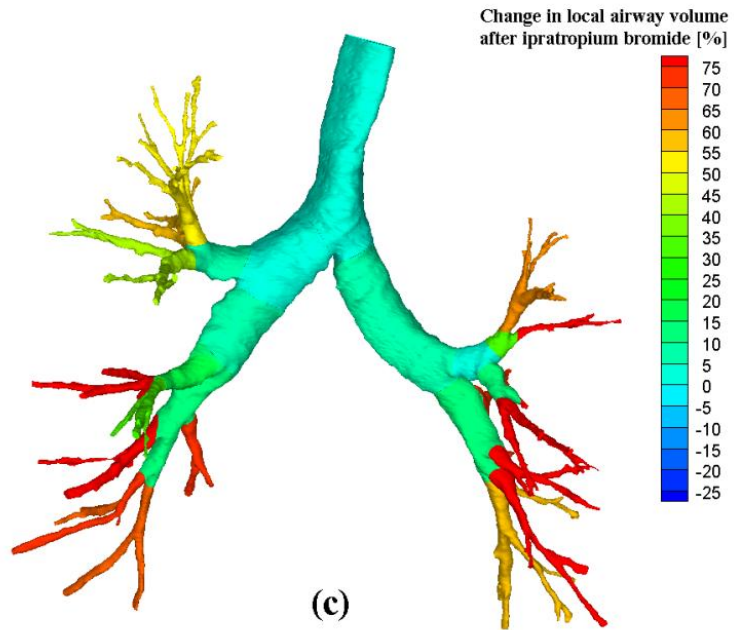

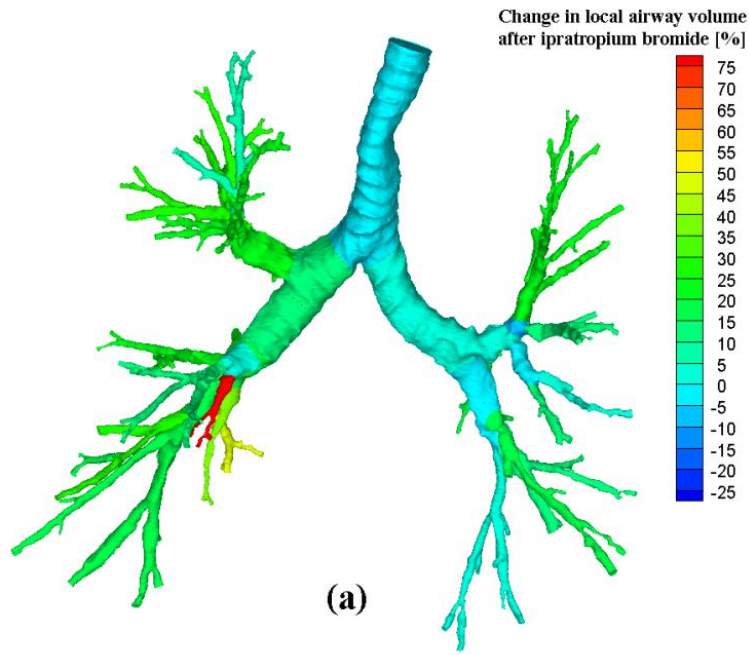

Table 3 Lung function changes after salbutamol and ipratropium bromide

Patient number	ΔFEV_1 (% pred)	ΔFEV_1 (% pred)	ΔVC (L)	ΔVC (L)	ΔR (kPa/L)	ΔR (kPa/L)	$\Delta specR$ (kPa)	$\Delta specR$ (kPa)				
Lung function testing

Average	10.8	10.5	5.0	4.5	31.6	32.4	-47.6	-44.5	-17.7	-16.7	-57.2	-58.1

Abbreviations: FEV₁, forced expiratory volume in 1 second; VC, vital capacity; R, airway resistance; specR, specific airway resistance (corrected for lung volume R × FRC); V_{tot}, total volume of the segmented airways; V_{cent}, volume of the central airways until the third bifurcation; V_{dist}, volume of the distal airways from third to seventh bifurcation; R_{awtot}, airway resistance of all segmented airways; R_{awcent}, airway resistance on the central airways until the third bifurcation; R_{awdist}, airway resistance of the distal airways from third to seventh bifurcation; % pred, percentage predicted.

Notes: Grey shading indicates changes after salbutamol; no shading indicates changes after ipratropium bromide.

FLUID

ATROVENT vs VENTOLIN

Ipratropium bromide vs. salbutamol

Branded vs. generic salmeterol/fluticasone

CORRELATION BETWEEN GEOMETRY AND QOL

COPD and Asthma Population (pooled data)

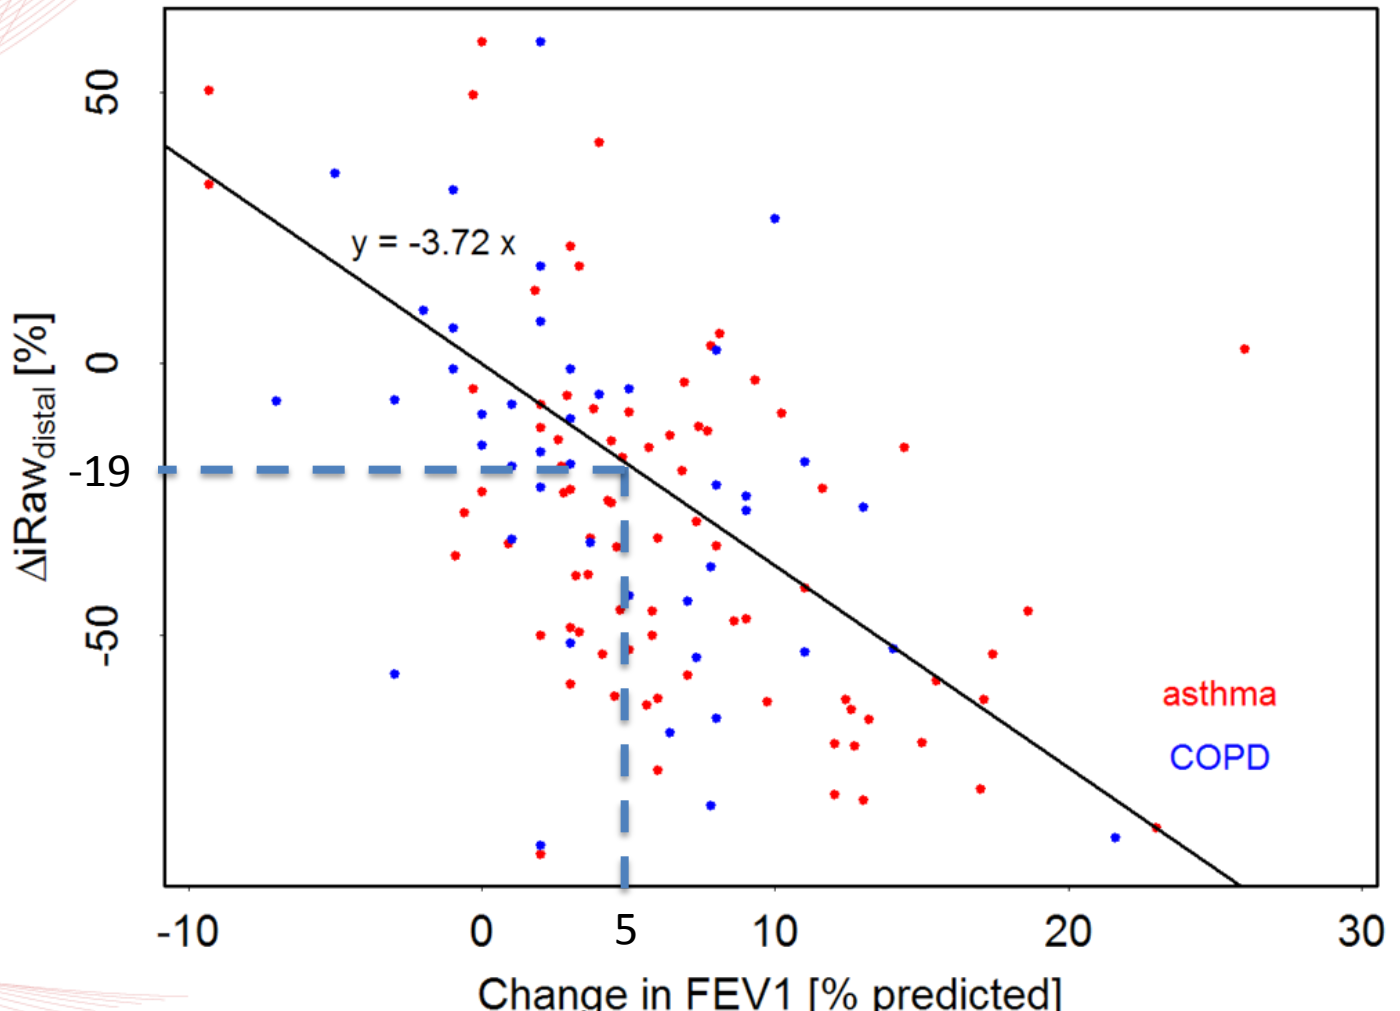

$p < 0.0001$, $R^2 = 0.44$

CORRELATION BETWEEN GEOMETRY AND QOL

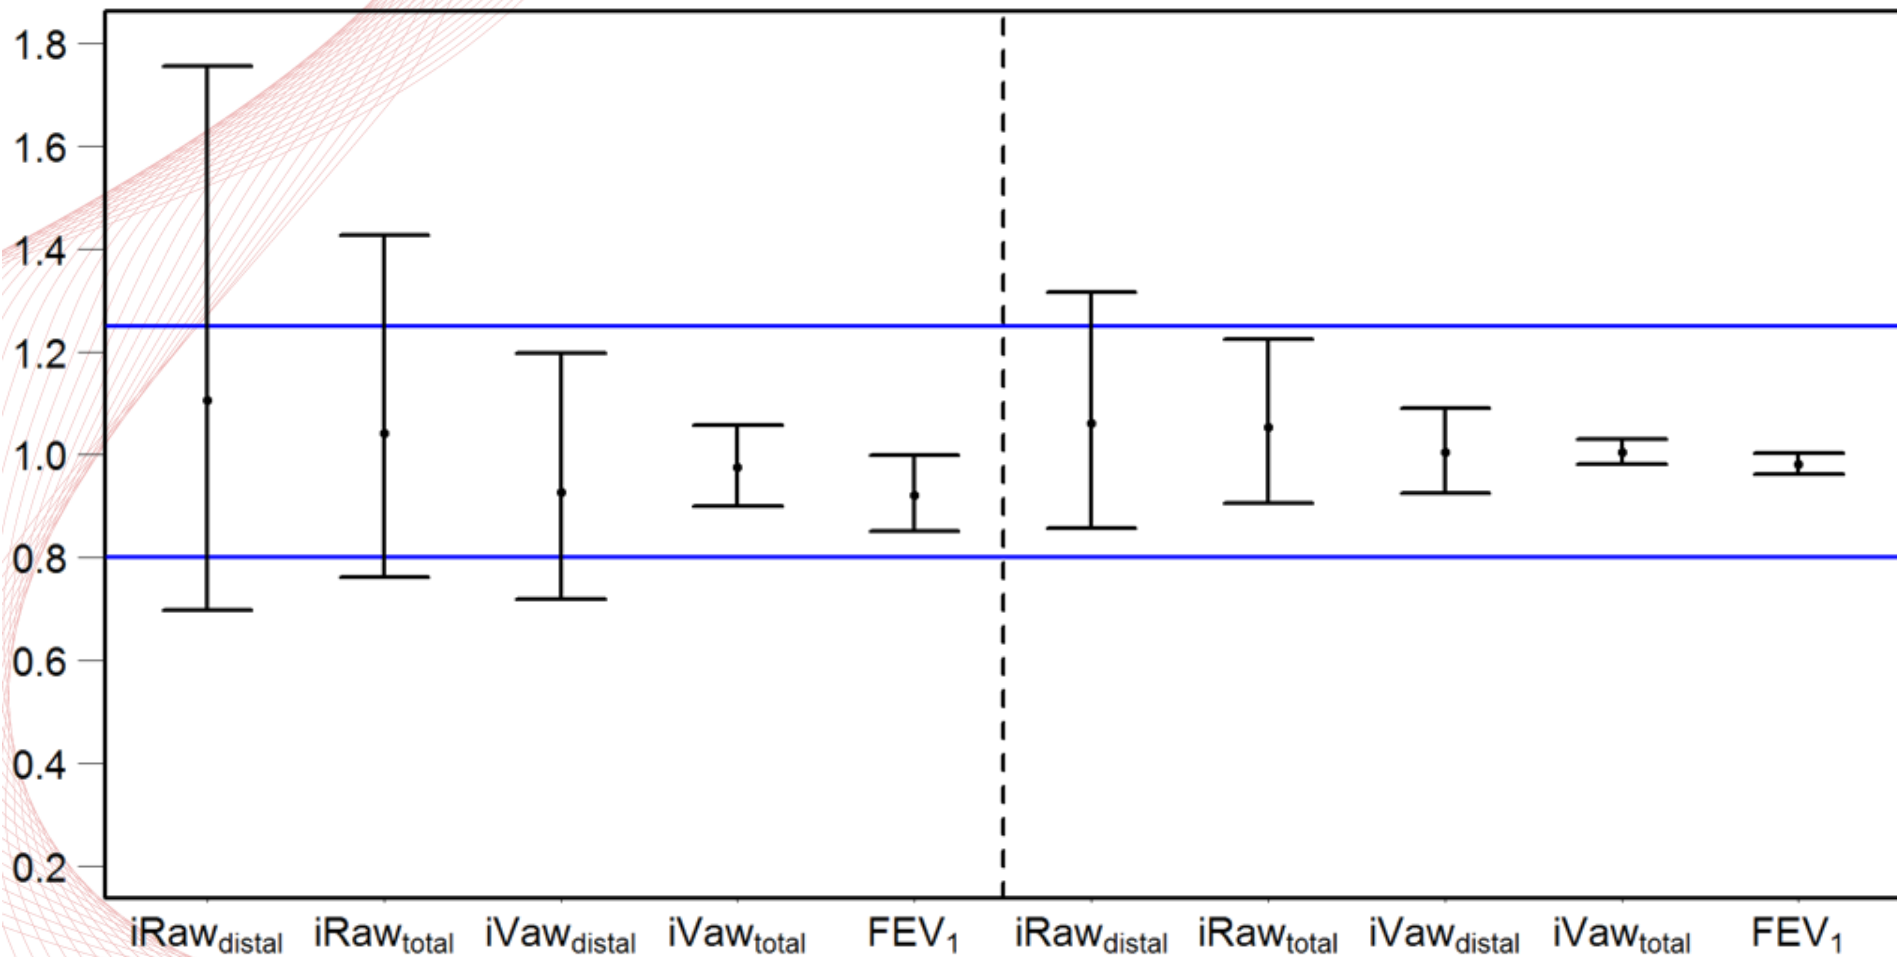

COPD and Asthma Population (pooled data)

$p < 0.0001$, $R^2 = 0.52$

Ipratropium bromide vs. salbutamol

Branded vs. generic salmeterol/fluticasone

Branded vs. generic salmeterol/fluticasone

FRI TO BRIDGE BETWEEN PK AND PD

Pharmacokinetics

FRI-based
aerosol deposition

FRI-based
airway resistance
(iRaw)

FRI-based
airway volume
(iVaw)

FEV1

High ability to
differentiate products

Low ability to
differentiate products

- FRI is more sensitive compared to standard PFT
- FRI can yield regional information in small scale clinical trials
- FRI has the potential to bridge between PK and PD
