

About OMICS Group

OMICS Group International is an amalgamation of Open Access publications and worldwide international science conferences and events. Established in the year 2007 with the sole aim of making the information on Sciences and technology 'Open Access', OMICS Group publishes 400 online open access scholarly journals in all aspects of Science, Engineering, Management and Technology journals. OMICS Group has been instrumental in taking the knowledge on Science & technology to the doorsteps of ordinary men and women. Research Scholars, Students, Libraries, Educational Institutions, Research centers and the industry are main stakeholders that benefitted greatly from this knowledge dissemination. OMICS Group also organizes 300 International conferences annually across the globe, where knowledge transfer takes place through debates, round table discussions, poster presentations, workshops, symposia and exhibitions.

About OMICS Group Conferences

OMICS Group International is a pioneer and leading science event organizer, which publishes around 400 open access journals and conducts over 300 Medical, Clinical, Engineering, Life Sciences, Pharma scientific conferences all over the globe annually with the support of more than 1000 scientific associations and 30,000 editorial board members and 3.5 million followers to its credit.

OMICS Group has organized 500 conferences, workshops and national symposiums across the major cities including San Francisco, Las Vegas, San Antonio, Omaha, Orlando, Raleigh, Santa Clara, Chicago, Philadelphia, Baltimore, United Kingdom, Valencia, Dubai, Beijing, Hyderabad, Bengaluru and Mumbai.

- Used in the U.S. for 20 years
- 1st FDA cleared device in 2007, many followed
- Using the Authority of Others (Hamblin, et al)

The Science Behind LaserCap®

LaserCap® Low-Level Laser Light Therapy

Low-Level Laser Light Therapy (LLLT) has been shown in thousands of peer-reviewed publications to increase cellular survival, proliferation and function. LLLT stimulates and preserves hair follicles in patients with androgenetic alopecia and other hair loss disorders.

How does low level laser light re-grow hair?

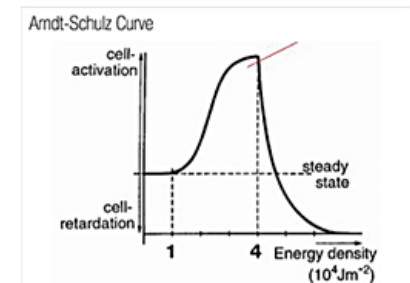

The low level laser light is absorbed by mitochondria and increases cellular respiration, and induces activation of transcription factors via reactive oxygen species. Controlled clinical trials have shown efficacy in treating stroke, stimulating wound healing, orthopedic conditions and relief of chronic inflammation. Preclinical studies have shown effectiveness in spinal cord injuries, peripheral nerve regeneration, heart attacks, degenerative brain diseases and traumatic brain injury.

Not surprisingly LLLT is able to stimulate and preserve hair follicles in patients with androgenetic alopecia and other hair loss disorders. A peer-reviewed study published in 2009 led to FDA clearance of a laser comb device for hair re-growth. The hair follicles cannot be "brought back from the dead" but significant improvement in hair density and quality can be achieved if treatment is started before hair loss has progressed too much. Preclinical studies using LLLT to stimulate ex vivo human follicles in culture and accelerate mouse hair re-growth have also been reported.

(For detailed clinical studies and peer reviews)

Optimal Power

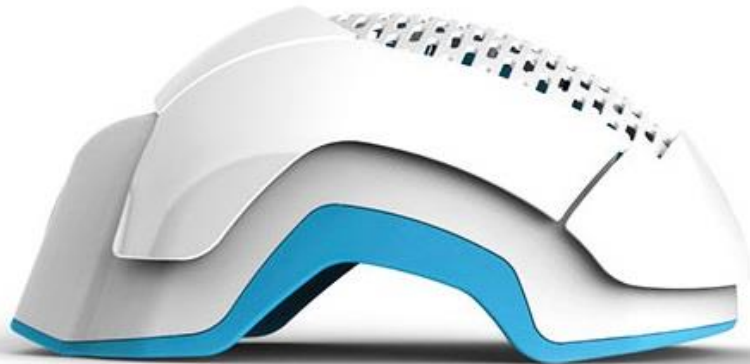

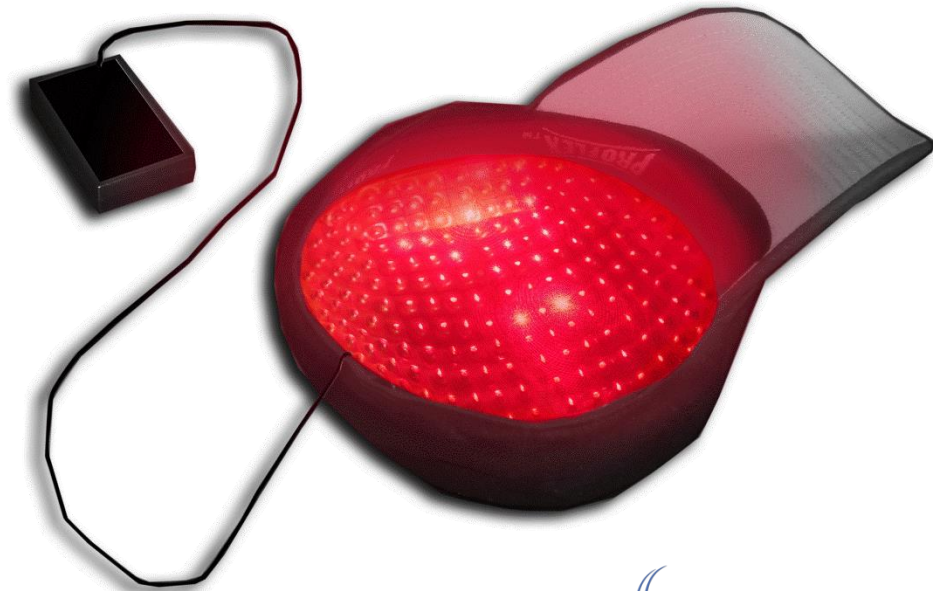

LaserCap® delivers optimal power to the scalp in the treatment session. LaserCap® was designed to deliver up to 4 Joules/cm² of laser light energy to the scalp in the treatment session. This power level has been shown to produce maximal cell activation in other LLLT applications and LaserCap® Chief Science Advisor Michael Hamblin, PhD, at Harvard, believes it applies to hair regrowth as given by the Arndt-Schulz model, to the right.

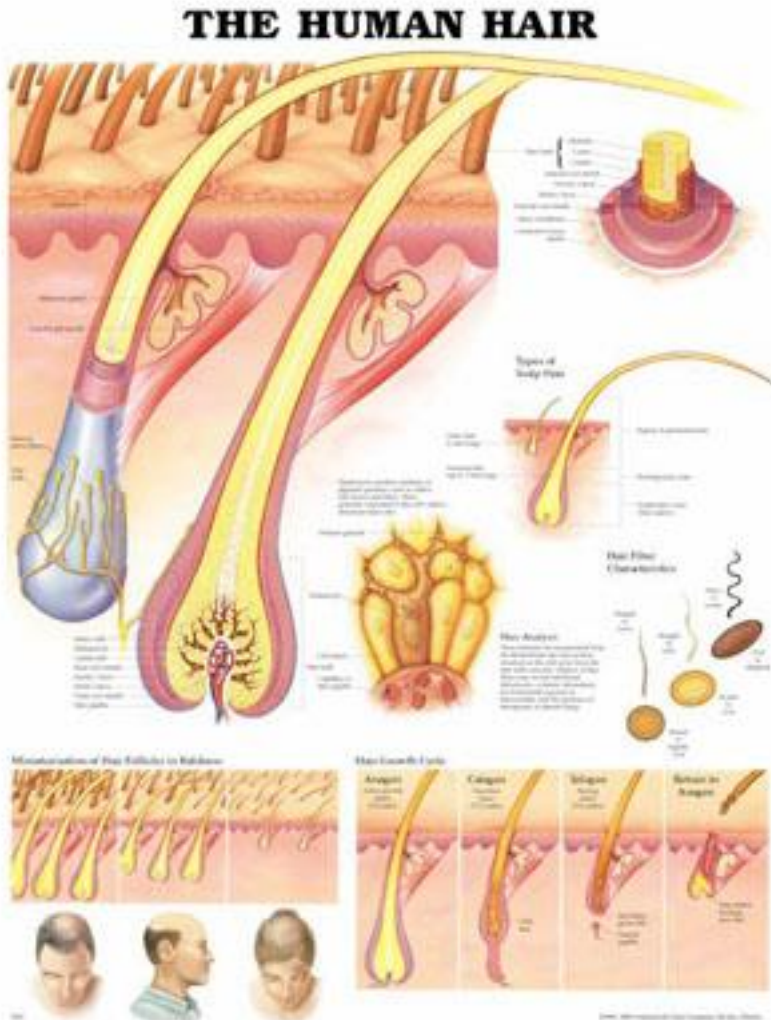

Sommer AP, Pinheiro AL, Mester AR, Franke RP, Whelan HT. (2001) Biostimulatory windows in low-density laser activation: lasers, scanners, and NASA's light emitting diode array system. J Clin Laser Med Surg. Feb;19(1):29-33

LLT Patient of Bradley S. Kushi, M.D. Central California Laser Hair Therapy

LLT Patient of Bradley S. Kushi, M.D. Central California Laser Hair Therapy

LaserCap Hair Therapy of Jerry Young, M.D.

LLT Patient of M. Shino, M.D. TX Hair Clinic. The HairCap transplant 2/23 was his destiny.

Michael Hamblin, MD

"I believe that LaserCap is the most convenient device for delivering the low-level laser light therapy (LLT) to the scalp as it does not require active combing, but it is still a non-invasive device contrast with the hair dryer-like hood."

Michael Hamblin, MD Harvard Medical School

"I've been using LaserCap myself for about 6 months and the results have been pretty substantial. Now you can see a complete difference. I would recommend LaserCap to all my patients."

Michael Hamblin, MD Harvard Medical School

LLT HAS BEEN FEATURED ON:

Ask your physician today how you can treat your hair loss with LaserCap®

LaserCap® was created by Michael Rubin, MD, in collaboration with internationally-recognized hair restoration surgeons, Robert Haber, M.D., Michael Hamblin, Ph.D. a Harvard-based Photo Medicine expert, and M.I.T.-trained optical physicist, David Smith, Ph.D.

The expert team behind LaserCap® developed a device with the coverage of a dome, in a portable design. The scalp is treated throughout the duration of treatment.

You can perform almost any activity during use, including walking, riding, running, driving, working and more.

LASERCAP® IS AVAILABLE AT THE MEDICAL OFFICE OF:

The Portable Low-Level Laser Treatment Device for Male Hair Loss

WHAT IS LASERCAP®?

LaserCap® is a prescription only, portable home use therapeutic device used to treat and promote hair growth in males and females with clinical hair loss.

LaserCap® has 224 INDIVIDUAL 650nm, 5mW lasers in a flexible dome-shaped membrane that fits comfortably in almost any hat. It is powered by a small belt clip battery pack and offers you the low level laser power of an in-office clinical unit in the comfort of your home.

HOW DOES IT WORK?

Simply place LaserCap® inside your favorite hat and switch it on. LaserCap® operates with a rechargeable battery pack and can be USED VIRTUALLY ANYWHERE. The dome-shaped membrane delivers LLT to the entire scalp stimulating and preserving hair follicles in patients with hair loss.

ASK YOUR PHYSICIAN TODAY ABOUT LASERCAP®

PROMOTES HAIR GROWTH
LaserCap® is designed to deliver up to 4 Joules/cm² of laser light energy to the scalp in each treatment session. According to Photo Medicine expert Michael Hamblin "This power level has been shown to produce maximal cell activation in other LLT applications."

PATIENT COMPLIANCE
LaserCap® is as easy as wearing a hat. It's portable, discreet, and comes with a rechargeable battery pack. Wear it alone or under your favorite cap or hat.

DOSEAGE
It treats the scalp area consistently & evenly.

ASK YOUR PHYSICIAN TODAY ABOUT LASERCAP® FOR MORE INFORMATION CALL 1-877-711-GROW4769

LOW-LEVEL LASER THERAPY

LLT: Low-Level Light/Laser Therapy (LLT) also referred to as cold laser therapy, biostimulation, & photo therapy, has been used over the past 10 years in a number of laser devices for treatment of hair loss. LLT is able to stimulate and preserve hair follicles in patients with Androgenetic Alopecia.

"Low-level laser therapy has been shown in thousands of peer-reviewed publications to increase cellular survival proliferation & function."

The Portable Low-Level Laser Treatment Device for Female Hair Loss

USER OPERATING INSTRUCTIONS

Read all instructions and safety precautions before using your Nutrexe Personal Hair Therapy Laser

Operating Instructions

Remove all components from box. Plug charger into wall then into unit and charge for a minimum of 8 hours prior to use. Once fully charged, your Personal Hair Therapy Laser is ready to use. Your device is designed to operate at full capacity for a minimum of 30 minutes. You can also operate the device using the charging cord.

Turn on device by depressing the On/OFF Switch (left button). Note that the 15 minute countdown timer has illuminated. Depress the Start button (right button) and the laser diodes illuminate and the timer counts down 15 minutes. Repeat the process to treat longer than 15 minutes. You may pause the device by depressing the right button and re-start the device by depressing the right button again.

To check if lasers are operating, hold device to hand and note red laser pattern on skin

Place the smooth concave face of the device on scalp/face and follow our "Treatment Tips" for maximum effectiveness.

Hold your Personal Hair Therapy Laser over the first area to be treated for 2-3 minutes. Move the device to the adjacent area and repeat. Your total treatment time should be 15 to 30 minutes depending on the total area to be treated. You can re-treat an area as needed.

Use your Personal Hair Therapy Laser no more than EVERY OTHER DAY for maximum effectiveness. Studies show that overstimulation of light therapy can be counterproductive to results.

The Nutrexe Personal Hair Therapy Laser Hands-Free Stand provides a more convenient treatment experience. Simply place the laser handle into the custom holder on the stand, adjust the height and angle to comfortably fit to your head moving the device each 2-3 minutes as previously described. See Stand instructions for more details.

Treatment Tips for Maximum Benefit

The Nutrexe Personal Hair Therapy Laser should be used for 15-30 minutes per treatment session no more than every other day. Many people find a 3-day per week regimen works well.

Further, spend 2-3 minutes of overlapping coverage on each area the size of the laser surface. If the needed treatment area is 3 times the size of the laser surface, the total treatment time would be 9 minutes, 4 times would require 12 minutes, etc.

You may choose to double your treatment regimen until your hair improves significantly - perhaps 3-6 months. After which time you may reduce the regimen.

Scalp should be clean. DO NOT use sunscreen on scalp as it will block the laser light. Nutrexe's laser diodes penetrate the scalp through the hair, so no uncomfortable braids or weaves are needed to separate hairs to reach the scalp. The smooth concave surface is flat and directly on scalp - the closer - the more effective.

Always charge device between treatment sessions to insure maximum effectiveness.

Benefits of Your Personal Hair Therapy Laser

Your Personal Hair Therapy Laser is a professional-quality device that uses the healing properties of Cold Laser Light resulting in hair that looks fuller and thicker with more body and sheen. "Your scalp and hair follicles benefit from the increased stimulation and blood flow the lasers create" according to Dr. Michael Hamblin, Photo-medicine expert at the Wellman Center of Harvard University. The Nutrexe Personal Hair Therapy Laser has 35 Cold Laser Diodes, not LED lights like some devices. It is the most powerful personal laser device available on the market today delivering approximately 171.5 mW of power to the scalp and follicles. The device is powered by a rechargeable Lithium-Ion battery. It is lightweight, portable and easy to use either at home or while traveling.
