

About OMICS Group

OMICS Group International is an amalgamation of [Open Access publications](#) and worldwide international science conferences and events. Established in the year 2007 with the sole aim of making the information on Sciences and technology 'Open Access', OMICS Group publishes 400 online open access [scholarly journals](#) in all aspects of Science, Engineering, Management and Technology journals. OMICS Group has been instrumental in taking the knowledge on Science & technology to the doorsteps of ordinary men and women. Research Scholars, Students, Libraries, Educational Institutions, Research centers and the industry are main stakeholders that benefitted greatly from this knowledge dissemination. OMICS Group also organizes 300 [International conferences](#) annually across the globe, where knowledge transfer takes place through debates, round table discussions, poster presentations, workshops, symposia and exhibitions.

About OMICS Group Conferences

OMICS Group International is a pioneer and leading science event organizer, which publishes around 400 open access journals and conducts over 300 Medical, Clinical, Engineering, Life Sciences, Pharma scientific conferences all over the globe annually with the support of more than 1000 scientific associations and 30,000 editorial board members and 3.5 million followers to its credit.

OMICS Group has organized 500 conferences, workshops and national symposiums across the major cities including San Francisco, Las Vegas, San Antonio, Omaha, Orlando, Raleigh, Santa Clara, Chicago, Philadelphia, Baltimore, United Kingdom, Valencia, Dubai, Beijing, Hyderabad, Bengaluru and Mumbai.

Obesity- and metabolic syndrome-related biomarkers as predictors of development and progression of type 2 diabetes

Abstract ▼

OBJECTIVE The objective of this study was to determine potential added value of novel risk factors in predicting the development of type 2 diabetes beyond that provided by standard clinical risk factors.

RESEARCH DESIGN AND METHODS The Atherosclerosis Risk in Communities (ARIC) Study is a population-based prospective cohort study in

PURPOSE

Fasting hyperinsulinemia (FGI)- a potential biomarker to predict development of t2DM in MS patients?

Materials and Methods

Hyperinsulinemia (fasting) > 15 mkMU/ml

247 MS patients:

115 male

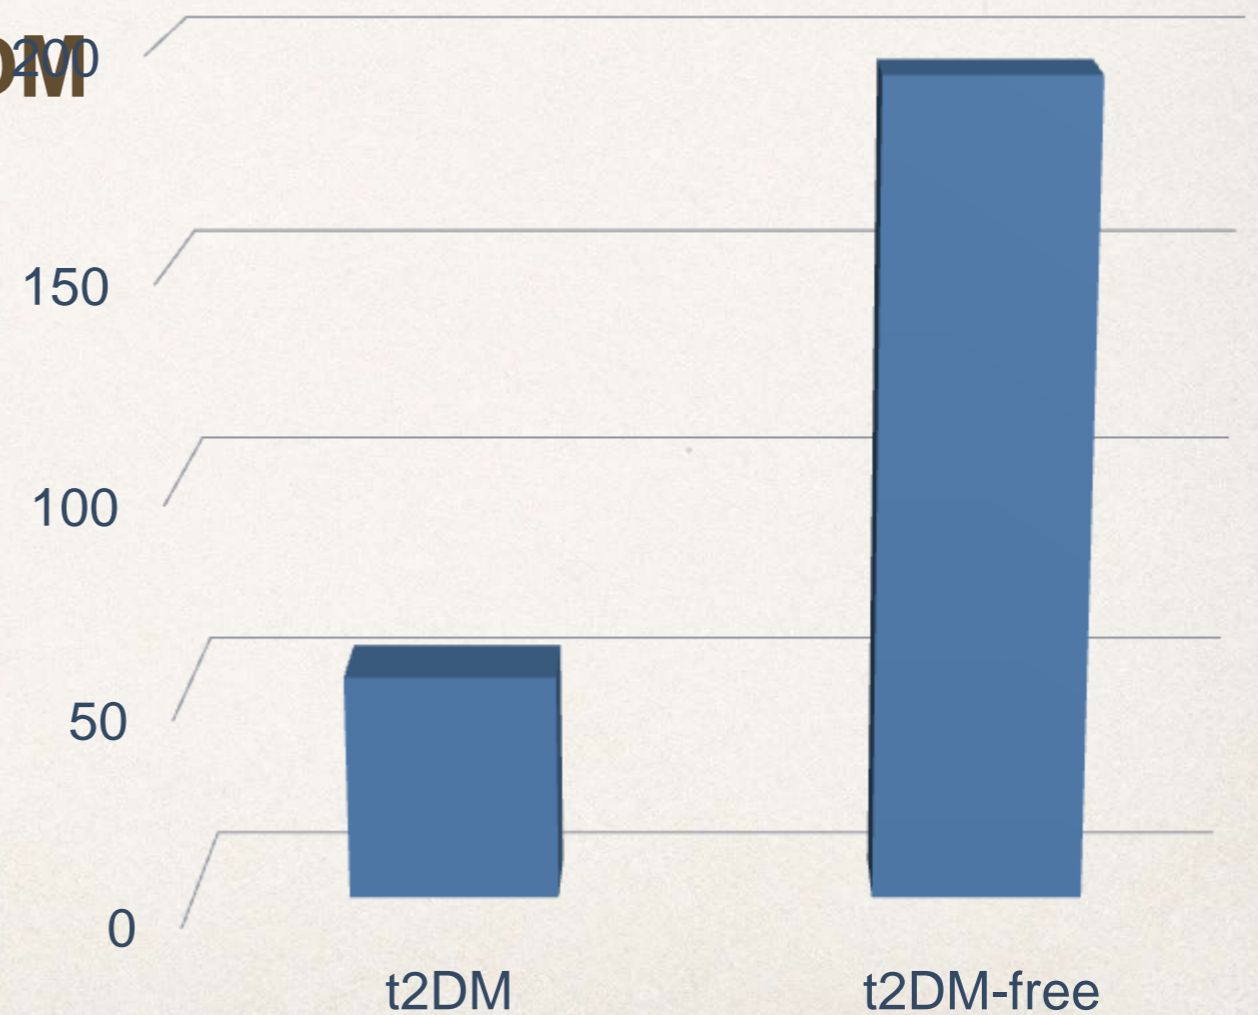

132 female

Age (average) : 56 ± 5,8 years

Observation 3 years

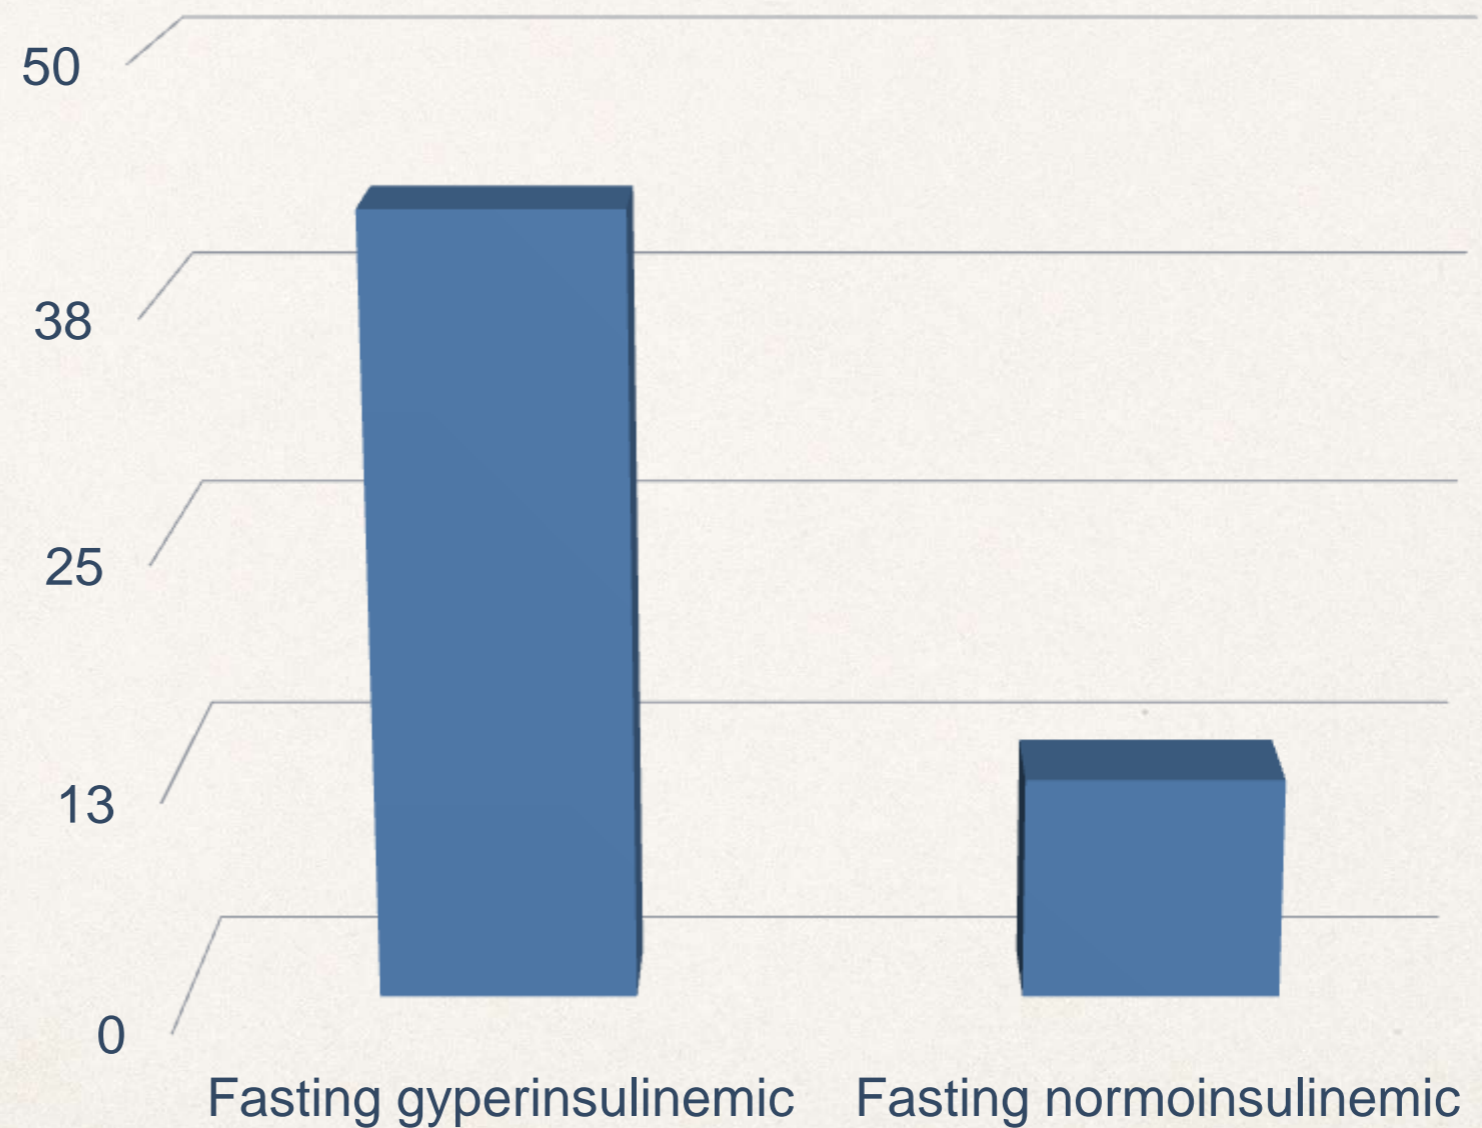

Results

After 3 years 54 patients had t2DM

Results

78% of t2DM manifestated had fasting gyperinsulinemia befoure

Results

t2DM-free patients

14% t2DM-free
had FGI before

Conclusion

- Fasting insulin level can be regarded as a biomarker of t2DM
- Insulin level measurement is technically simple and inexpensive
- Fasting insulin level can be used as a screening method among the persons in high risk of CVD and t2DM

Thank you

Let Us Meet Again
We welcome you all to our future conferences of
