### **About OMICS Group**

OMICS Group International is an amalgamation of Open Access publications and worldwide international science conferences and events. Established in the year 2007 with the sole aim of making the information on Sciences and technology 'Open Access', OMICS Group publishes 400 online open access scholarly journals in all aspects of Science, Engineering, Management and Technology journals. OMICS Group has been instrumental in taking the knowledge on Science & technology to the doorsteps of ordinary men and women. Research Scholars, Students, Libraries, Educational Institutions, Research centers and the industry are main stakeholders that benefitted greatly from this knowledge dissemination. OMICS Group also organizes 300 International conferences annually across the globe, where knowledge transfer takes place through debates, round table discussions, poster presentations, workshops, symposia and exhibitions.

# About OMICS Group Conferences

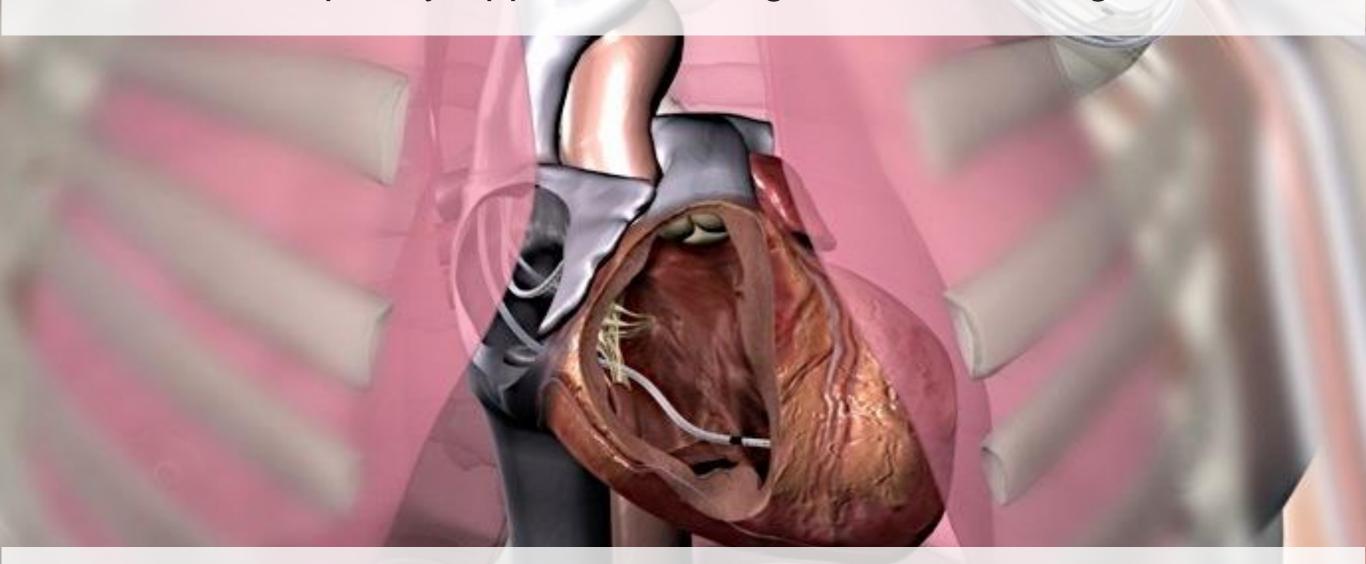

OMICS Group International is a pioneer and leading science event organizer, which publishes around 400 open access journals and conducts over 300 Medical, Clinical, Engineering, Life Sciences, Pharma scientific conferences all over the globe annually with the support of more than 1000 scientific associations and 30,000 editorial board members and 3.5 million followers to its credit.

OMICS Group has organized 500 conferences, workshops and national symposiums across the major cities including San Francisco, Las Vegas, San Antonio, Omaha, Orlando, Raleigh, Santa Clara, Chicago, Philadelphia, Baltimore, United Kingdom, Valencia, Dubai, Beijing, Hyderabad, Bengaluru and Mumbai.

## Case

65 year male with h/o DM, CAD, CKD and pacemaker (implanted 3 years ago) is admitted with:

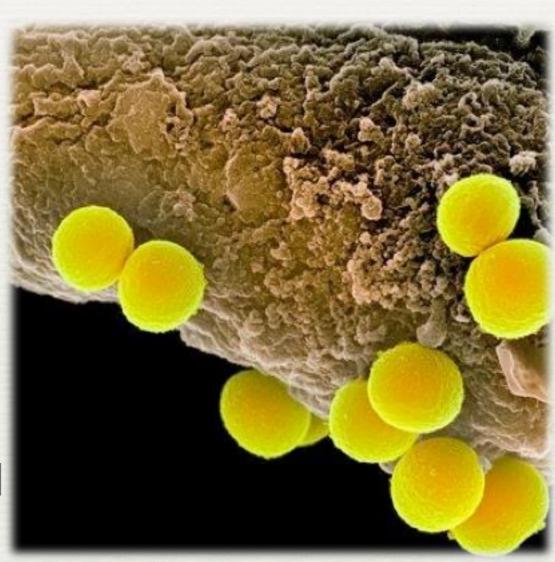

- Fever, chills and rigors
- Pacemaker pocket looks normal. Left leg ulcer with purulent drainage.
- Admission labs reveals leukocytosis and high CRP.
- + CXR is normal
- Admission blood cultures are reported to grow GPC at 12 hours.

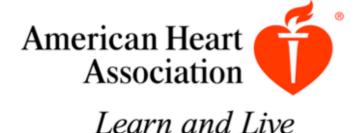

### SAB and Device Infection

- + 62 patients with SAB and CIED (2001-2006)
- 1/3 had CIED-infection
- Only 30% had generator pocket infection.
- Presence of PV and ICD increased odds of CIED-infection

# Circulation Arrhythmia and Electrophysiology

JOURNAL OF THE AMERICAN HEART ASSOCIATION

Outcomes in Patients With Cardiovascular Implantable Electronic Devices and Bacteremia Caused by Gram-Positive Cocci Other Than Staphylococcus Aureus Malini Madhavan, Muhammad R. Sohail, Paul A. Friedman, David L. Hayes, James M. Steckelberg, Walter R. Wilson, Larry M. Baddour and for the Mayo Cardiovascular Infections Study Group

Circ Arrhythm Electrophysiol 2010;3;639-645; originally published online September 18, 2010;

- 1/3 had CIED-infection
- Pocket was source of BSI in 30% patients
- Prosthesis burden (# of leads) and device revision were associated with CIED infection

Circulation. 2010 121(3):458–477

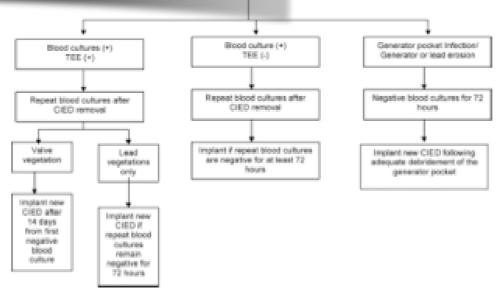

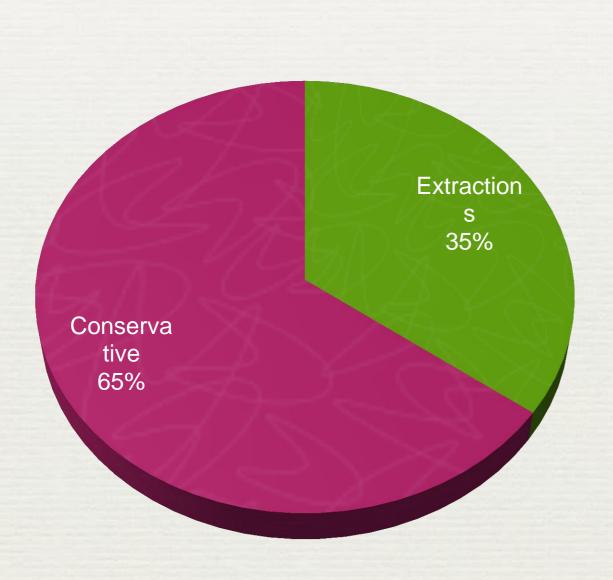

Figure 2. A, Approach to management of adults with CIED infection. AHA indicates American Heart Association, Modified from Schall et al.<sup>26</sup> with permission. 'A history, physical examination, chest radiograph, electrocardiogram, and device interrogation are standard baseline procedures before CIED removal. \*Quastion of artibiotics should be counted from the day of device explantation. Treatment can be extended to 4 or more weeks the three are metastatic septic complications (ie, osteomyellits, organ or deep abscess, etc) or sustained bloodstream infection despite CIED removal. B, Approach to implantation of a new device in patients after removal of an infected CIED. Modified from Schall et al.<sup>26</sup> with permission.

Sohail et al. JACC 2007

### CIED Infection Management

(National estimates - US)

30,820

**Total Infections** 

10,800

Extractions

20,020

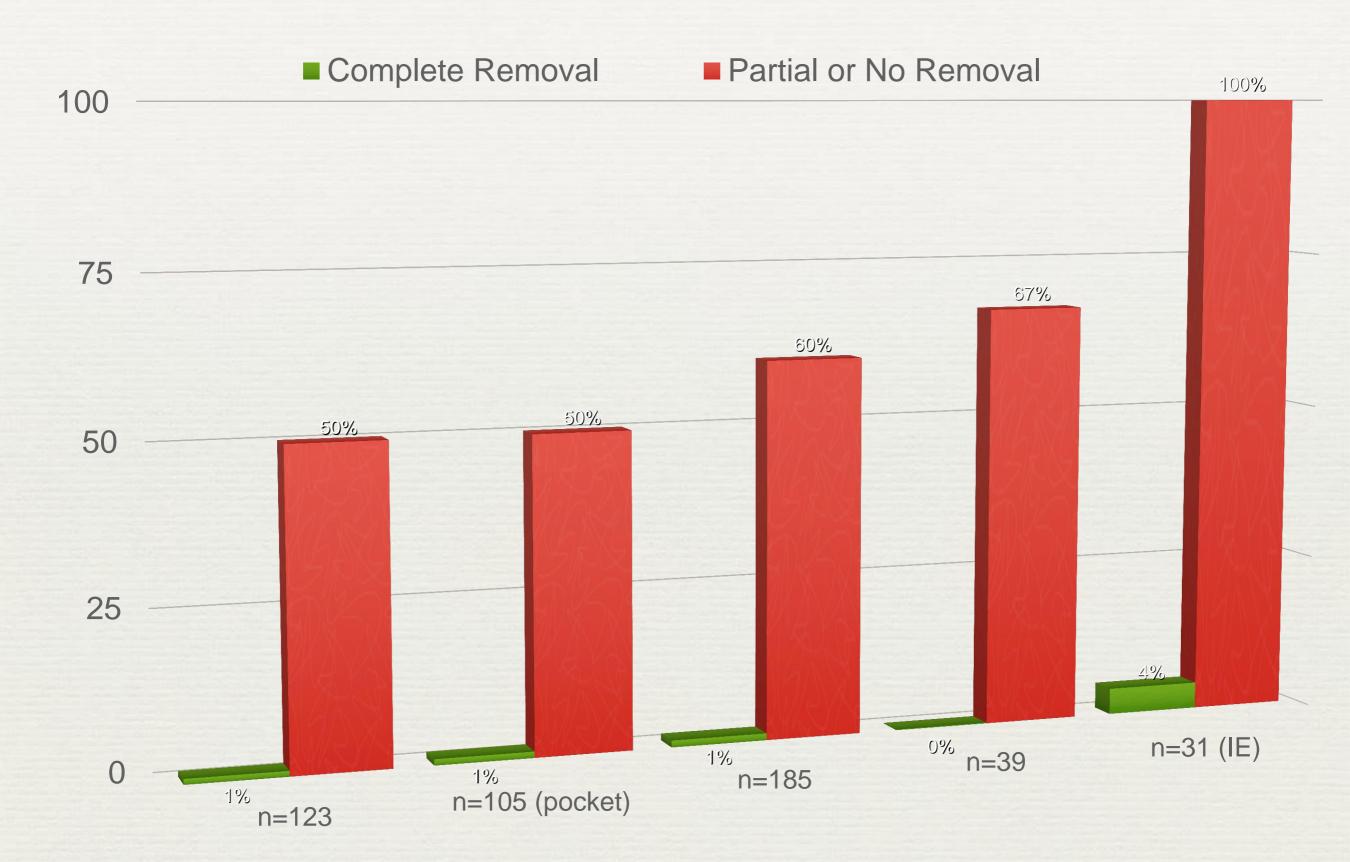

**Conservative Management** 

65%

Undertreated. Risk of recurrence, endocarditis or death

### Relapse Rates by CIED Infection Treatment

### Device Retention = A Fatal Choice

- Mortality up to 47% if device not removed vs 16% in patients with complete extraction in patients with CIED-SAB
- Treatment failure (death, recurrence) was more common in cases with device retention (52% vs. 25%)

Chamis, et al. Circulation, August 2001 (104): 1029-33

- Mortality rate in patients with CIED related endocarditis:
  - Antibiotics alone: 66%
  - Combined abx + eletrode removal: 18%

Cacoub et al. Am J Cardiol 1998;82:480-484

# Impact of timing of device removal on mortality in patients with cardiovascular implantable electronic device infections

Katherine Y. Le, MD, MPH,\* Muhammad R. Sohail, MD,<sup>†</sup> Paul A. Friedman, MD,<sup>‡</sup> Daniel Z. Uslan, MD,<sup>§</sup> Stephen S. Cha, MS,<sup>|</sup> David L. Hayes, MD, FHRS,<sup>‡</sup> Walter R. Wilson, MD,<sup>†</sup> James M. Steckelberg, MD,<sup>†</sup> Larry M. Baddour, MD,<sup>†</sup> for the Mayo Cardiovascular Infections Study Group

Heart Rhythm 2011; 8:1678 -1685

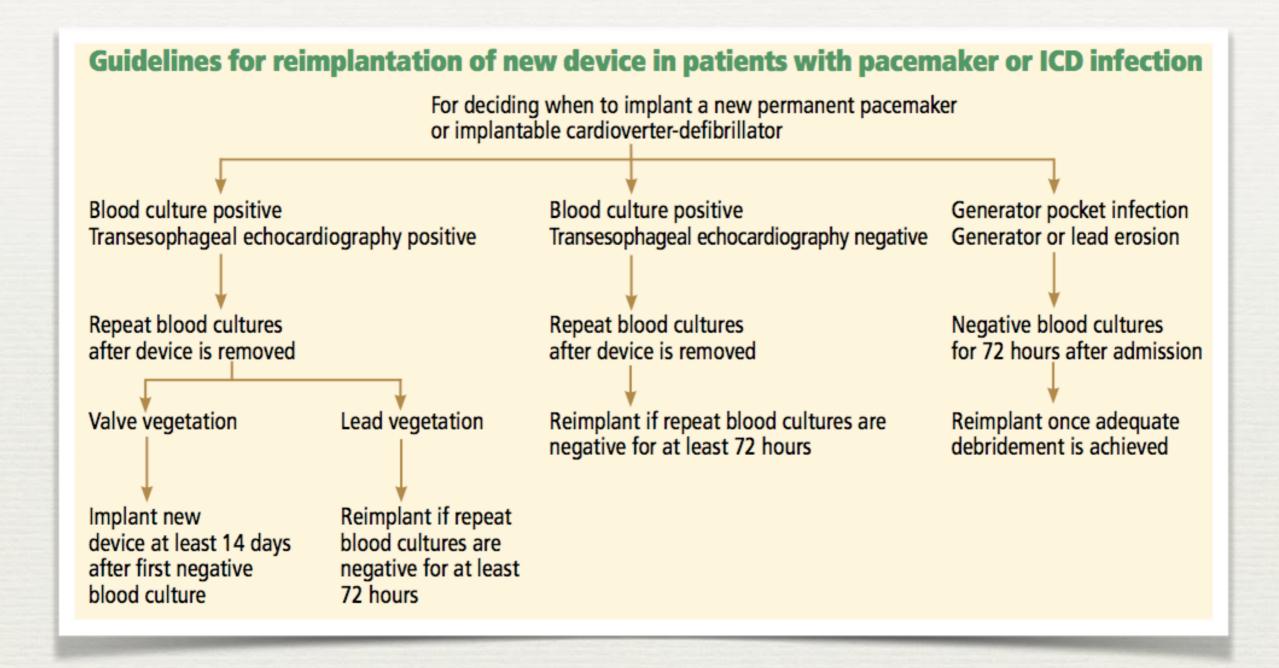

## Timing of Device Removal

- ◆ In multivariate analysis,
   conservative management was
   associated with a 7-fold increase in
   30-day mortality
- ◆ Immediate device removal, when compared to delay in device removal, was associated with a 3-fold
   decrease in 1-year mortality

Efficacy of Antibiotic Prophylaxis Before the Implantation of Pacemakers and Cardioverter-Defibrillators: Results of a Large, Prospective, Randomized, Double-Blinded, Placebo-Controlled Trial

Julio Cesar de Oliveira, Martino Martinelli, Silvana Angelina D'Orio Nishioka, Tânia Varejão, David Uipe, Anísio Alexandre Andrade Pedrosa, Roberto Costa and Stephan B. Danik

Circ Arrhythmia Electrophysiol 2009;2;29-34; originally published online Feb 10, 2009;

De Oliveira et al. Circ Arrhythm Electrophysiol. 2009

# Antibiotic Choice - AHA guidelines

- Antibiotic 1-hour before the procedure
- A first-generation cephalosporin, such as cefazolin, is recommended.
- Cephalosporin allergy: Vancomycin
- Vancomycin allergy: Daptomycin or Linezolid
- If vancomycin is used, then it should be administered
   90 to 120 minutes before the procedure.

Baddour et al. AHA Scientific Statement. Circulation 2010

# Antibiotics after device implantation

Currently, there are no data to support the administration of postoperative antibiotic therapy, and it is **NOT** recommended because of the risk of drug adverse events, selection of drug-resistant organisms, and cost.

Baddour et al. AHA Scientific Statement. Circulation 2010

### Antibiotics are recommended

Antibiotic prophylaxis is recommended if subsequent invasive manipulation of the CIED is required.

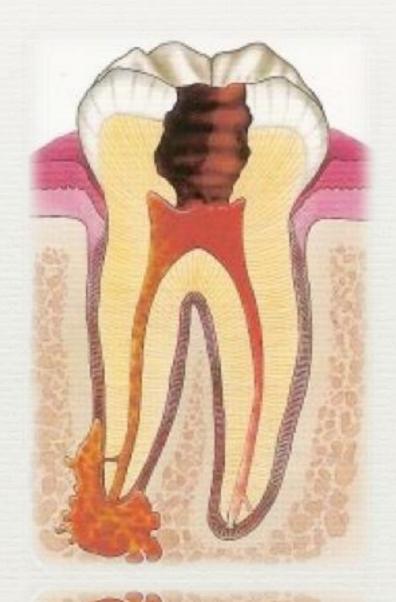

# Secondary prophylaxis

A review of the literature from 1950 to 2011 for publications on cardiac electrophysiological device infections reveals more than 200 articles, **none** of which **report hematologic infection** from dental, gastrointestinal, genitourinary, dermatologic, or other procedures.

## Antibiotics for dental procedures

- Antibiotic prophylaxis for dental procedures is of Little or No value.
- In the rare event of a device infection due to an oral pathogen, it is most likely to have arisen from a bacteremia from activities of daily life.

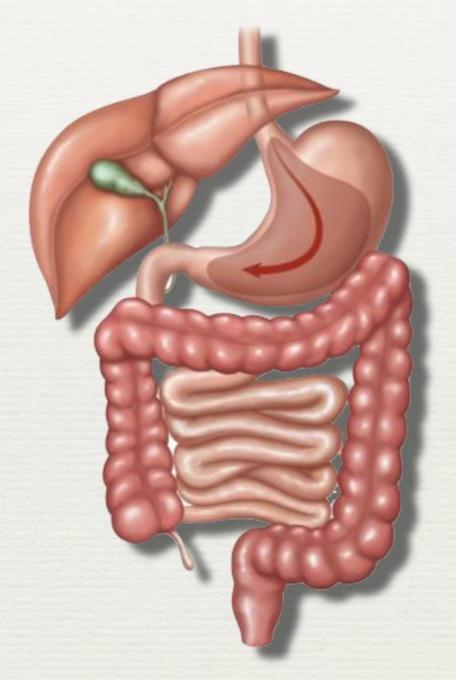

## GI & GU Tract Procedures

Use of Prophylactic antibiotics solely to prevent CIED-infection is **NOT** recommended.

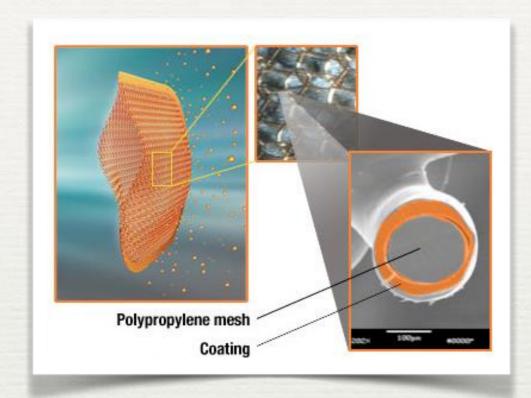

(Class III, Level of Recommendation C)

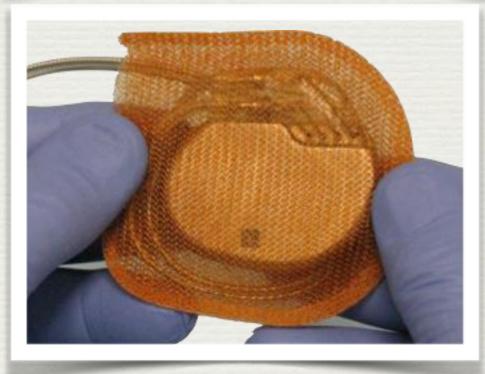

Baddour et al. AHA Scientific Statement. Circulation 2010

### Antibacterial envelope

AIGISRx antibacterial envelope

- → Polymer mesh
- ◆ After implantation, it
   releases minocycline and
   rifampin over 7 to 10 day
   period
- Stabilize CIEDs

#### **DEVICES**

### Use of an Antibacterial Envelope is Associated with Reduced Cardiac Implantable Electronic Device Infections in High-Risk Patients
