# **GENETIC ANALYSIS OF COMPONENTS OF SALINITY TOLERANCE IN RICE**

**(*Oryza sativa* L.)**

Dr. M. Sudha Rani  
Senior Scientist (Plant Breeding)  
Seed Research & Technology  
Centre  
Rajendranagar, Hyderabad-  
500 030

## **AREA AND PRODUCTION LEVELS OF RICE**

	<b>INDIA</b>	<b>ANDHRA PRADESH</b>
<b>Area (m. ha)</b>	<b>42.56</b>	<b>4.75</b>
<b>Production (m. t)</b>	<b>95.33</b>	<b>14.42</b>
<b>Productivity (kg/ha)</b>	<b>2240</b>	<b>3035</b>

**DES Annual report,2012**

## EXTENT OF SALT-AFFECTED SOILS

### FAO Database

$397 \times 10^6$  ha (3.1%) – Saline soils  
 $434 \times 10^6$  ha (3.4%) - Sodic soils

World: 800 m.ha (*Zhu et al. 2001*)

India:  
8.5 m. ha  
2.19 m. ha coastal saline

Andhra Pradesh: 2.74 lakh ha

# What are the salt-affected soils ?

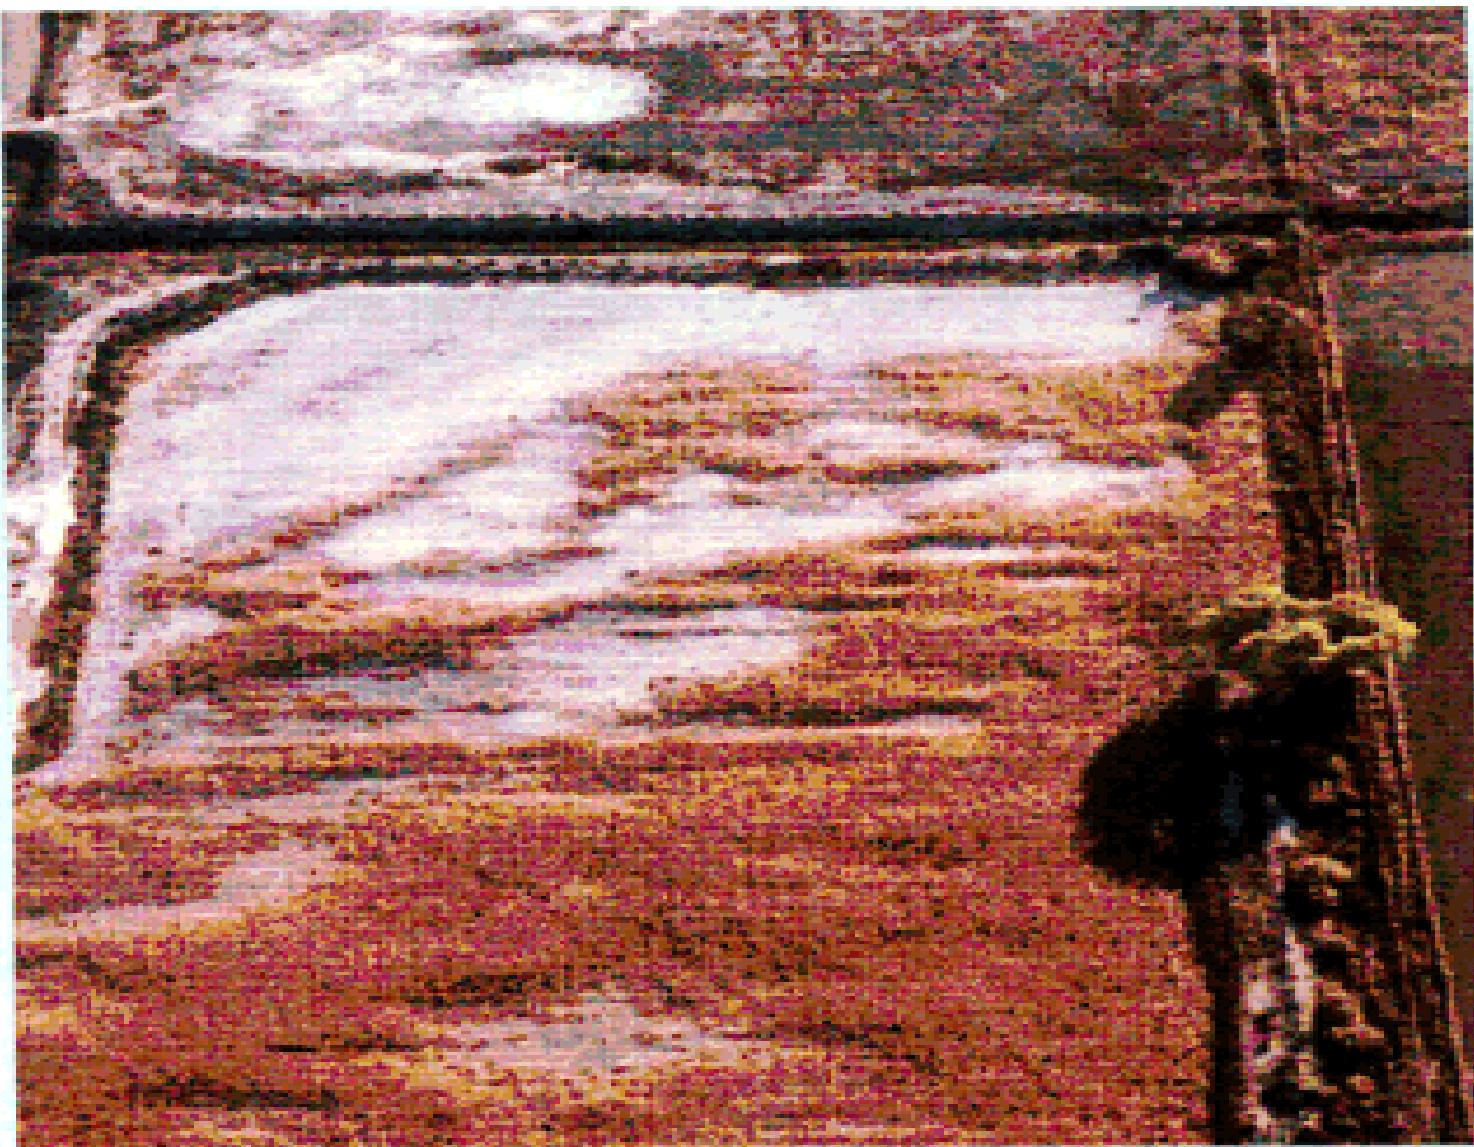

Salt-affected type	Electrical conductivity ECe (dSm <sup>-1</sup> )#	Exchangeable Sodium Percentage ESP (%)	Sodium Absorption Ratio SAR	pHs
Saline	> 4	< 15	< 13	< 8.8
Sodic	< 4	> 15	> 13	8.5-10.5
Saline - sodic	> 4	> 15	Variable	> 8.5

# at 25°C

$$ESP = \frac{\text{Exchangeable Sodium} \times 100}{\text{Cation Exchange Capacity}}$$

$$SAR = \sqrt{\frac{Na^+}{\frac{Ca^{2+} + Mg^{2+}}{2}}}$$

## **Salt affected field**

## How to Manage the Salt-affected Areas ?

Do we need  
ST cultivars  
?

Rice has  
enormous  
variability

**1. Environment modifying approach**  
: Change the environment for the normal growth of plants

**2. Crop based approach** : Select or develop crop variety which can withstand the salt stress

### 3. Hybrid Approach

**It is the combination of environment modifying and plant based approach.**

#### Advantages:

- **More viable**
- **Highly productive**
- **Low resource cost**

Salt tolerant rice variety, CSR13, with 25% Gypsum

**Local variety without gypsum**

# Physiology: traits associated with salinity tolerance

Regulation of uptake

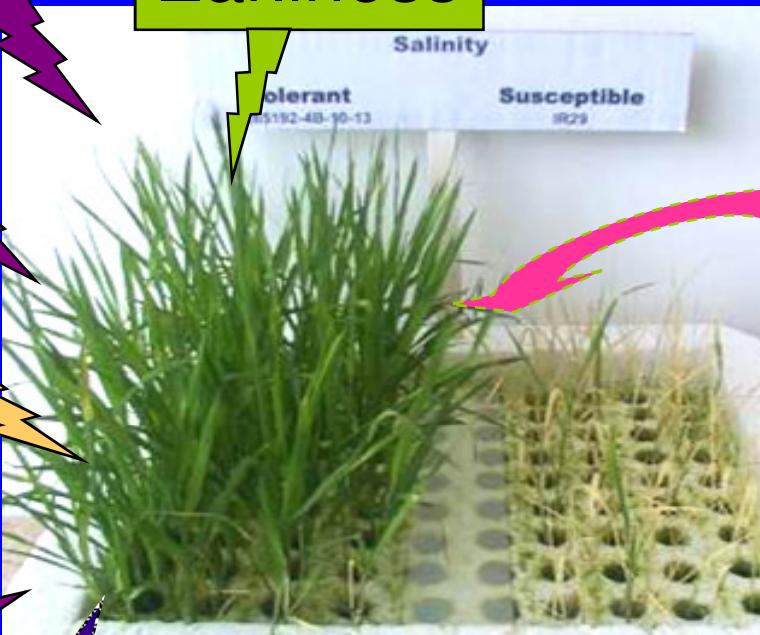

Earliness

Compartmentation  
In old tissue

Upregulation of  
osmoprotectants

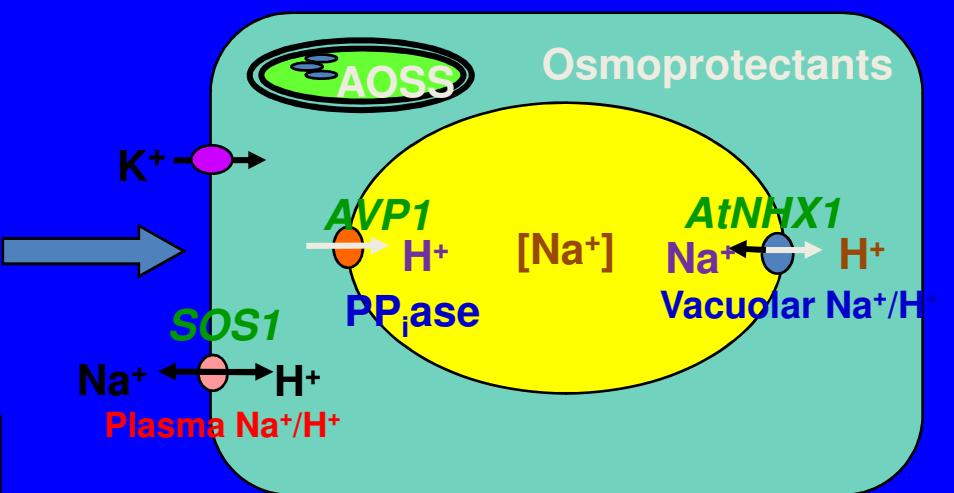

Vigorous growth

Compartmentation within  
tissue  
(tissue tolerance)

Protective  
metabolites  
Polyamines,  
dehydrins,  
glyoxalates

## Manifestation of Salt Stress

### Morphological Symptoms

- ❖ White leaf tip followed by tip burning (salinity)
- ❖ Leaf browning & death (sodicity)
- ❖ Stunted plant growth
- ❖ Low tillering
- ❖ Spikelet sterility
- ❖ Low harvest index
- ❖ Less florets per panicle
- ❖ Less 1000 grain weight
- ❖ Low grain yield
- ❖ Change in flowering duration
- ❖ Leaf rolling
- ❖ White leaf blotches
- ❖ Poor root growth
- ❖ Patchy growth in field

**Effect of salinity at Reproductive stage – Spikelet Sterility**

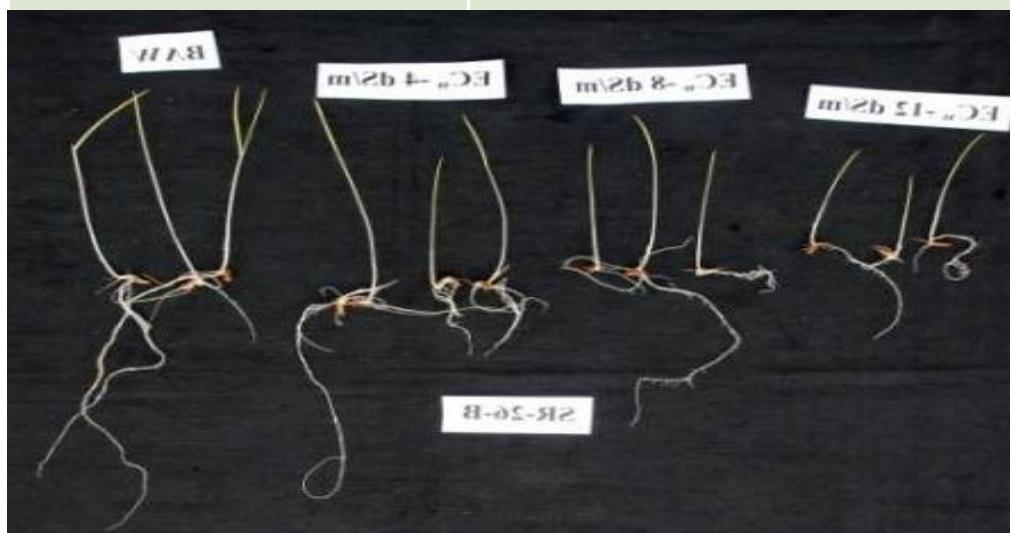

**Effect of salinity at reproductive stage – papery sterile spikelets**

## Objectives

- To evaluate the response of rice cultivars to salinity stress at seedling stage
- To understand the extent of relationship among grain yield, physiological and yield contributing parameters
- To estimate the extent of heterosis and inbreeding depression
- To study the nature of gene action and combining ability
- To identify the best combiners and best hybrids to select superior recombinants

# Screening of rice cultivars against salinity tolerance

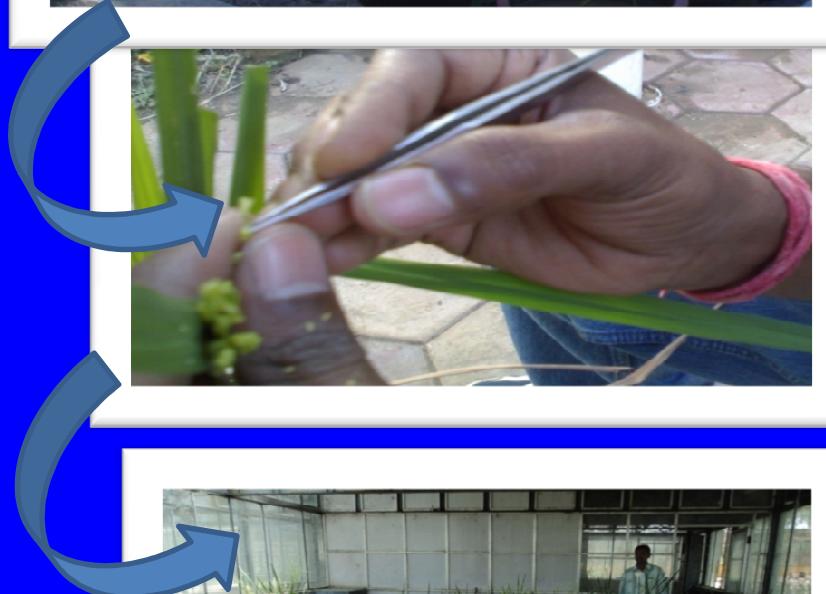

<b>Location</b>	<b>DRR, Hyderabad (Lab)</b>
<b>Genotypes</b>	<b>24</b>
<b>Replications</b>	<b>Three</b>
<b>Design</b>	<b>Factorial CRD</b>
<b>Treatments</b>	<b>Control, 4,8 and 12 dS/m</b>

<b>Data recorded</b>
<b>Germination (%)</b>
<b>Root length (cm)</b>
<b>Shoot length (cm)</b>
<b>Seedling length (cm)</b>
<b>Root dry weight (g)</b>
<b>Shoot dry weight (g)</b>
<b>Seed vigour index(SVI)</b>
<b>Sodium concentration in root (<math>\text{mg g}^{-1}</math>)</b>
<b>Potassium concentration in root (<math>\text{mg g}^{-1}</math>)</b>
<b>Sodium concentration in shoot (<math>\text{mg g}^{-1}</math>)</b>
<b>Potassium concentration in shoot (<math>\text{mg g}^{-1}</math>)</b>
<b>Sodium and potassium ratio in root</b>
<b>Sodium and potassium ratio in shoot</b>
<b>Standard Evaluation Score (SES) for visual salt injury</b>

## Salient features of the parents used for crossing

- **RPBio-226** : 125 days duration, resistant to BLB with fine grain quality
- **MTU -7029** : 155 days duration, moderately resistant to BLB and SB, GLH and low nitrogen responsive cultivar with dark green foliage.
- **CSR-27** : 140 days duration, moderately resistant to BLB, LF, semi dwarf plant type and tolerant to salinity and alkalinity.
- **CSR-30** : 130 days duration, tall plant type with aromatic slender grain and suitable for export.
- **CST 7-1:** 140 days duration, semi dwarf, medium slender grain type and tolerant to salinity.
- **CSRC(S) 5-2-2-5:** 135 days duration, resistant to LB, RTV, moderately resistant to SB, LF and tolerant to salinity.
- **SR 26 B :** 140 days duration, tall plant type, resistant to salinity with medium bold grain type.
- **CSRC(S)7-1-4:** 135-140 days duration, tolerant to salinity with medium bold grain.

## STUDY OF COMBINING ABILITY AND HETEROSESIS

*Kharif, 2010*

Generated 28F<sub>1</sub>  
hybrids

*Rabi, 2010-11*

1. Selfed 28F<sub>1</sub>  
hybrids

2. Once again  
fresh crosses  
affected

*Kharif, 2011*

Evaluation of F<sub>1</sub>  
and F<sub>2</sub> and  
parents

## Evaluation of Breeding Material

		Data recorded
Location	ARS, Machilipatnam (Two soil conditions)	Plant height (cm) (PH)
Season	Kharif, 2011	Days to 50 per cent flowering (DFF)
Treatments	28 F <sub>1</sub> progenies with eight parents	Number of tillers per plant (TT) Number of productive tillers per plant (PT) Panicle length (cm) (PL) Panicle weight (g)
Replications	Three	Number of filled grains per panicle (GPP)
Design	RBD	Spikelet fertility (%): Test weight (g) (TW)
Spacing	20 X 15 cm	Grain yield per plant (g) (GY) Harvest Index (%): SPAD chlorophyll meter readings Na <sup>+</sup> /K <sup>+</sup> ratio Root / shoot ratio Standard Evaluation Score (SES) for visual salt injury Yield reduction (%):

## **Screening of hybrids (in pots) along with parents**

***Rabi, 2010-11***

<b>Location</b>	<b>DRR, Hyderabad</b>	<b>Data recorded</b>
Genotypes	28 F1 hybrids and eight parents	Grain yield per plant (g)
Replications	Three	Na <sup>+</sup> /K <sup>+</sup> ratio
Design	Factorial CRD	Standard Evaluation Score (SES) for visual salt injury
Treatments	Control, 6 and 12 dS/m	

## Salinity tolerance reaction of rice genotypes

Genotypes	SES	Na <sup>+</sup> in shoot	K <sup>+</sup> in shoot	Na <sup>+</sup> /K <sup>+</sup> in shoot	Reaction to salinity
RPBio-226	5.88	5.443	4.480	1.214	Susceptible
