Subtype of lung cancer

New tumor marker of lung cancer
for early diagnosis and treatment

To investigate genetic mechanism
and

new target

1.2 Molecular basis of LC

Figure 1

Histopathological and molecular changes during the pathogenesis of squamous cell carcinoma of the lung with molecular changes commencing at early stages, and a histologically normal respiratory epithelium. There is stepwise molecular and histopathological sequence of events leading to dysplastic and invasive carcinoma stages. LOH, loss of heterozygosity.

1.3 Suppression subtractive hybridization(SSH)

- cDNA Microarray
- mRNA Differential display, DD
- Representational difference analysis, RDA
- Suppression subtractive hybridization, SSH

lower false positive, higher specific & sensitive

3、 Summary

- Library of differentially expressed genes in lung cancer.
- Potential targets for diagnostic & therapeutic usage.
- Two lung cancer associated genes.
- ERGIC3 may be a new biomarker for lung cancer.
- ERGIC3 may be a novel candidate oncogen for lung cancer.
