# Leading Sites of New Cancer Cases and Deaths – 2015 Estimates

Estimated New Cases*		Estimated Deaths	
Male	Female	Male	Female
Prostate 220,800 (26%)	Breast 231,840 (29%)	Lung & bronchus 86,380 (28%)	Lung & bronchus 71,660 (26%)
Lung & bronchus 115,610 (14%)	Lung & bronchus 105,590 (13%)	Prostate 27,540 (9%)	Breast 40,290 (15%)
Colon & rectum 69,090 (8%)	Colon & rectum 63,610 (8%)	Colon & rectum 26,100 (8%)	Colon & rectum 23,600 (9%)
Urinary bladder 56,320 (7%)	Uterine corpus 54,870 (7%)	Pancreas 20,710 (7%)	Pancreas 19,850 (7%)
Melanoma of the skin 42,670 (5%)	Thyroid 47,230 (6%)	Liver & intrahepatic bile duct 17,030 (5%)	Ovary 14,180 (5%)
Non-Hodgkin lymphoma 39,850 (5%)	Non-Hodgkin lymphoma 32,000 (4%)	Leukemia 14,210 (5%)	Leukemia 10,240 (4%)
Kidney & renal pelvis 38,270 (5%)	Melanoma of the skin 31,200 (4%)	Esophagus 12,600 (4%)	Uterine corpus 10,170 (4%)
Oral cavity & pharynx 32,670 (4%)	Pancreas 24,120 (3%)	Urinary bladder 11,510 (4%)	Non-Hodgkin lymphoma 8,310 (3%)
Leukemia 30,900 (4%)	Leukemia 23,370 (3%)	Non-Hodgkin lymphoma 11,480 (4%)	Liver & intrahepatic bile duct 7,520 (3%)
Liver & intrahepatic bile duct 25,510 (3%)	Kidney & renal pelvis 23,290 (3%)	Kidney & renal pelvis 9,070 (3%)	Brain & other nervous system 6,380 (2%)
All sites 848,200 (100%)	All sites 810,170 (100%)	All sites 312,150 (100%)	All sites 277,280 (100%)

\*Excludes basal cell and squamous cell skin cancers and in situ carcinoma except urinary bladder.

(Cancer Facts & Figures 2015)

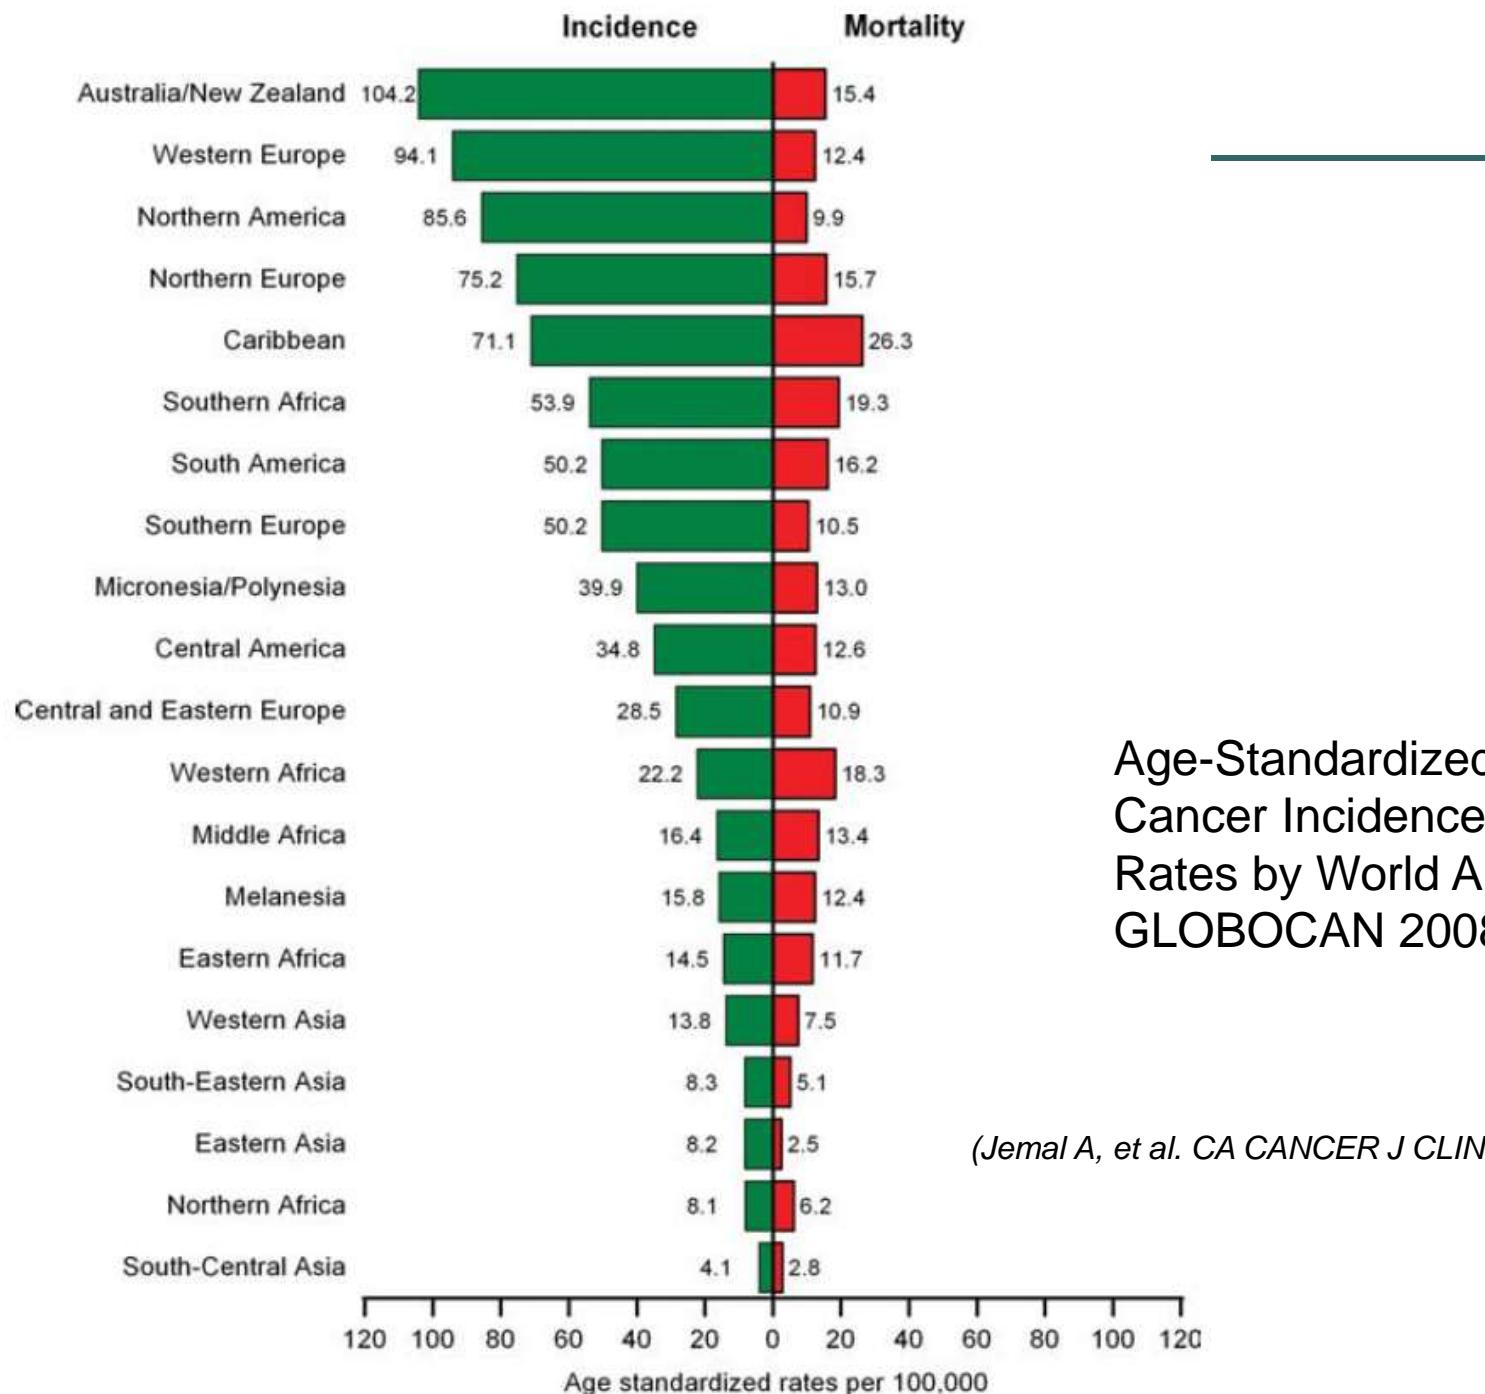

## Probability (%) of Developing Invasive Cancer during Selected Age Intervals by Sex, US, 2009-2011\*

		Birth to 49	50 to 59	60 to 69	70 and Older	Birth to Death
All sites†	Male	3.4 (1 in 29)	6.7 (1 in 15)	15.1 (1 in 7)	36.0 (1 in 3)	43.3 (1 in 2)
	Female	5.4 (1 in 19)	6.0 (1 in 17)	10.0 (1 in 10)	26.4 (1 in 4)	37.8 (1 in 3)
Breast	Female	1.9 (1 in 53)	2.3 (1 in 44)	3.5 (1 in 29)	6.7 (1 in 15)	12.3 (1 in 8)
Colon & rectum	Male	0.3 (1 in 300)	0.7 (1 in 148)	1.3 (1 in 80)	3.9 (1 in 26)	4.8 (1 in 21)
	Female	0.3 (1 in 326)	0.5 (1 in 193)	0.9 (1 in 112)	3.5 (1 in 28)	4.5 (1 in 22)
Kidney & renal pelvis	Male	0.2 (1 in 468)	0.3 (1 in 292)	0.6 (1 in 157)	1.3 (1 in 76)	2.0 (1 in 49)
	Female	0.1 (1 in 752)	0.2 (1 in 586)	0.3 (1 in 321)	0.7 (1 in 134)	1.2 (1 in 84)
Leukemia	Male	0.2 (1 in 419)	0.2 (1 in 598)	0.4 (1 in 271)	1.3 (1 in 75)	1.7 (1 in 59)
	Female	0.2 (1 in 516)	0.1 (1 in 968)	0.2 (1 in 464)	0.9 (1 in 117)	1.2 (1 in 84)
Lung & bronchus	Male	0.2 (1 in 578)	0.7 (1 in 140)	2.0 (1 in 49)	6.6 (1 in 15)	7.4 (1 in 13)
	Female	0.2 (1 in 541)	0.6 (1 in 173)	1.6 (1 in 64)	4.9 (1 in 20)	6.2 (1 in 16)
Melanoma of the skin‡	Male	0.3 (1 in 294)	0.4 (1 in 240)	0.8 (1 in 129)	2.1 (1 in 47)	3.0 (1 in 34)
	Female	0.5 (1 in 207)	0.3 (1 in 323)	0.4 (1 in 246)	0.9 (1 in 112)	1.9 (1 in 53)
Non-Hodgkin lymphoma	Male	0.3 (1 in 366)	0.3 (1 in 347)	0.6 (1 in 173)	1.8 (1 in 55)	2.4 (1 in 42)
	Female	0.2 (1 in 543)	0.2 (1 in 483)	0.4 (1 in 233)	1.4 (1 in 72)	1.9 (1 in 52)
Prostate	Male	0.3 (1 in 304)	2.3 (1 in 44)	6.3 (1 in 16)	10.9 (1 in 9)	15.0 (1 in 7)
Uterine cervix	Female	0.3 (1 in 358)	0.1 (1 in 840)	0.1 (1 in 842)	0.2 (1 in 565)	0.6 (1 in 154)
Uterine corpus	Female	0.3 (1 in 367)	0.6 (1 in 170)	0.9 (1 in 109)	1.3 (1 in 76)	2.7 (1 in 37)

\*For those who are free of cancer at the beginning of each age interval. †All sites excludes basal cell and squamous cell skin cancers and in situ cancers except urinary bladder. ‡Statistic is for whites.

# Prostate cancer

---

*Prostate cancer: Science and clinical practice. Edited by: J Mydlo & C Godec. 2013)*

# Tea

- ❖ From the plant *Camellia sinensis*

- Green tea (GT):

- Not fermented
- Polyphenol monomer (EC, EGC, ECG, **EGCG**)

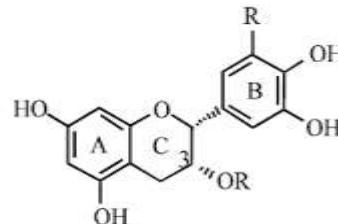

- Oolong tea:

- Partially fermented

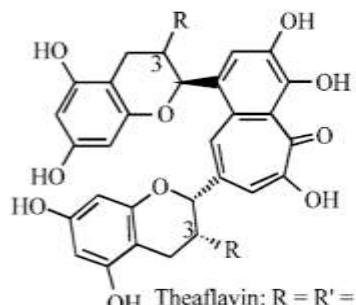

- Black tea:

- Fully fermented
- Dimers and polymers  
(theaflavins, thearubigins)

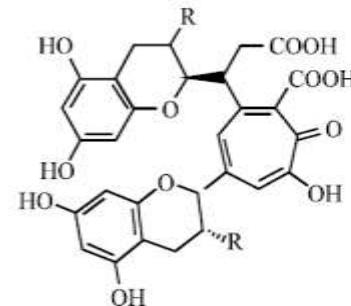

EGCG: R = Galloyl; R' = OH  
Epicatechin: R = R' = H  
EGC: R = H; R' = OH  
ECG: R = Galloyl; R' = H

Majorpolyphenols in green tea

Theaflavin-3-gallate: R = Galloyl; R' = CH  
Theaflavin-3, 3'-gallate: R = OH; R' = Galloyl  
Theaflavin-3, 3'-digallate: R = R' = Galloyl

The structures are not well defined  
R = gallate or other groups

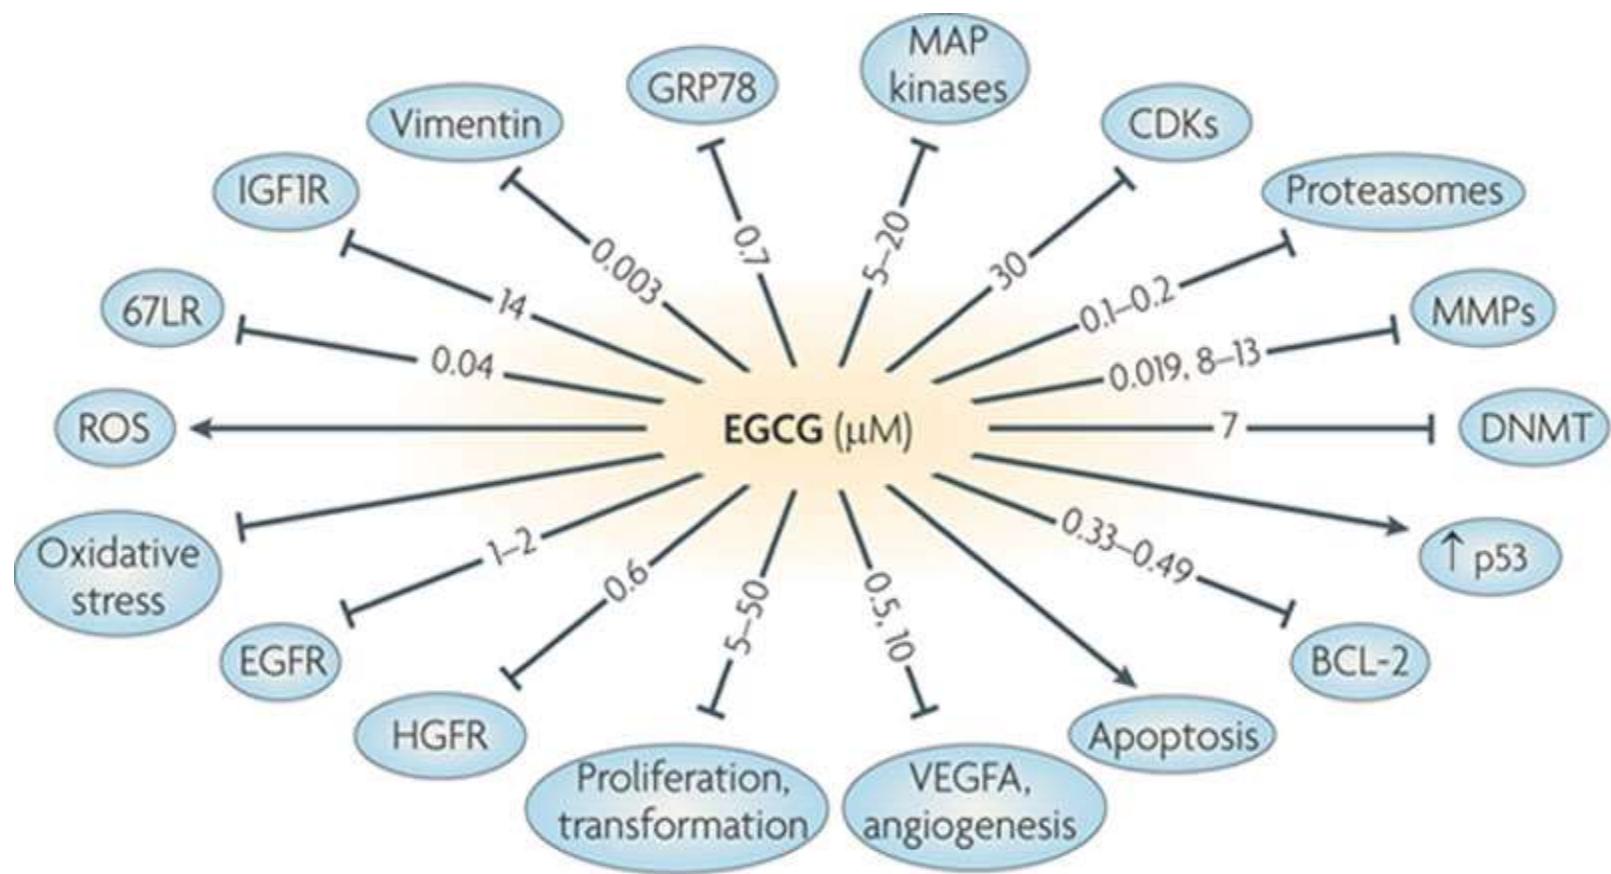

Majorpolyphenols in black tea

# GT and GT polyphenols

---

- Anti-carcinogenesis
  - Skin, lung, oral cavity, esophagus, stomach, intestine, colon, liver, pancreas, bladder, mammary gland, prostate
- Diabetes and obesity
- Cardiovascular diseases
- Neurodegenerative diseases
- Osteoporosis

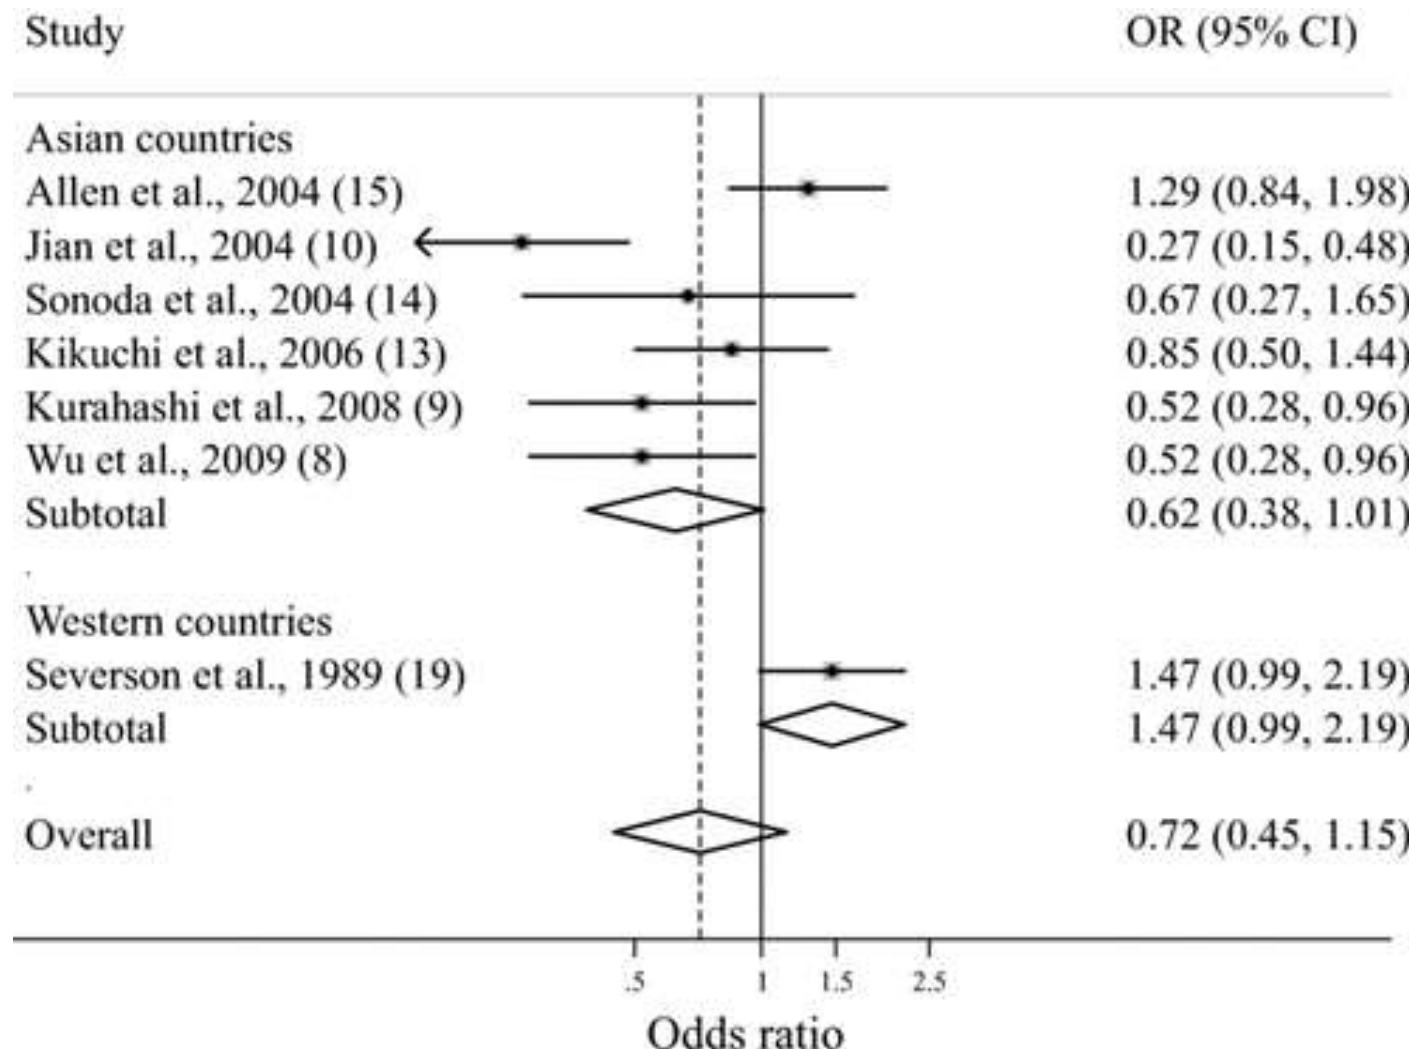

Nature Reviews | Cancer

Possible targets for the cancer preventive activity of (-)-epigallocatechin-3-gallate (EGCG).

(Yang CS, et al. Nature Reviews Cancer 2009, 9, 429-439)

## Pooled odds ratio (OR) of GT consumption (highest versus non/lowest) and risk of prostate cancer

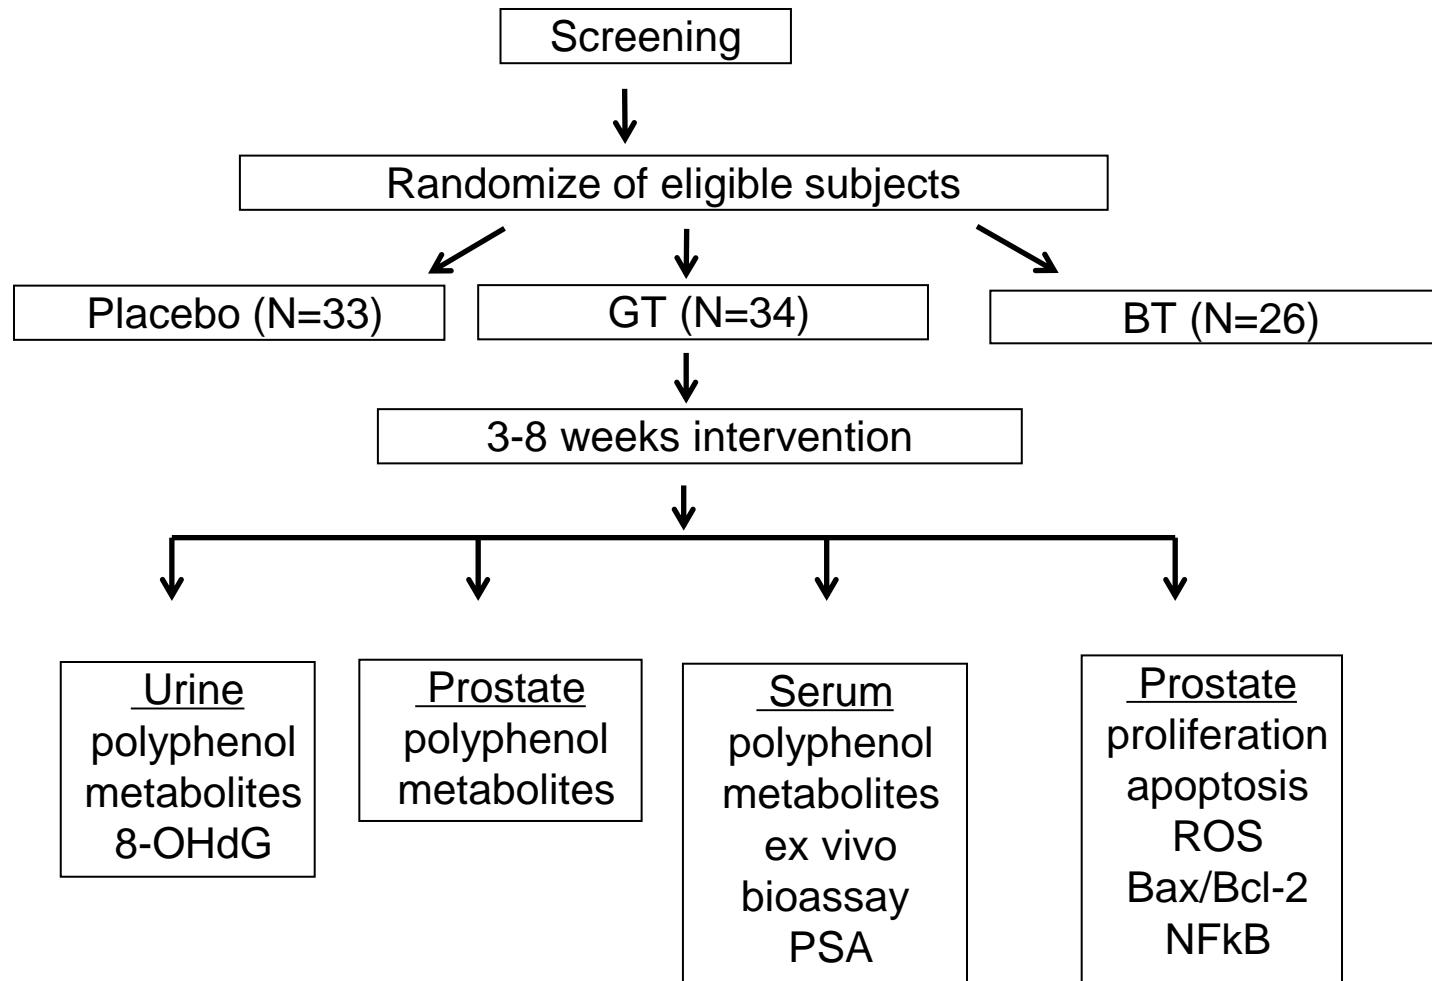

## Intervention studies: GT and prostate cancer

---

Tea, Country	Effect	Reference
GT extract, Italy, 600 mg	→ Reduced progression from HG-PIN to prostate cancer: Control 30% GTE 3%	Bettuzzi S et al. 2006
GT extract, USA, 800 mg EGCG (single arm)	→ Decreased serum PSA, HGF, VEGF in prostate cancer patients	McLarty J et al. 2009
GT extract, USA, 800 mg EGCG (placebo controlled)	→ A decreasing trend of PSA, in prostate cancer patients	Nguyen MM et al. 2012

# A phase II clinical trial of tea in prostate cancer

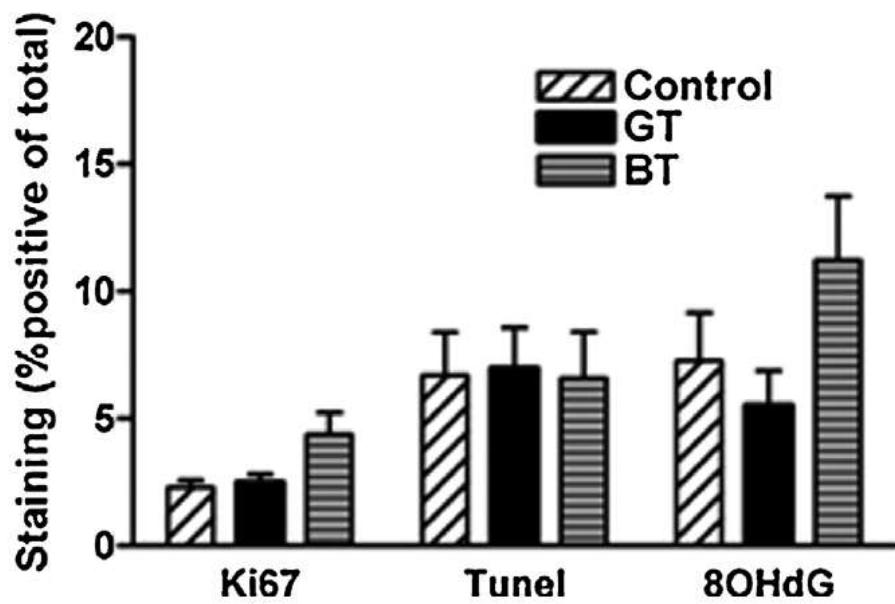

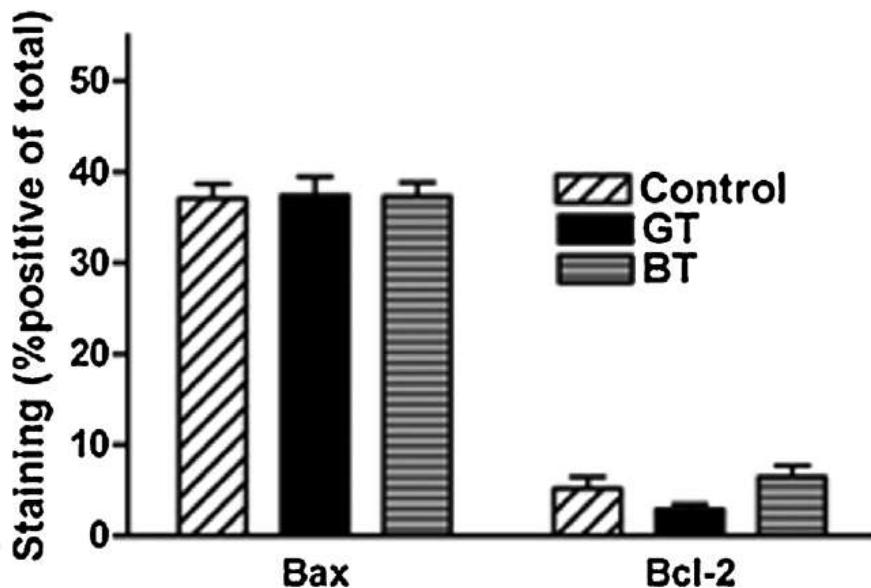

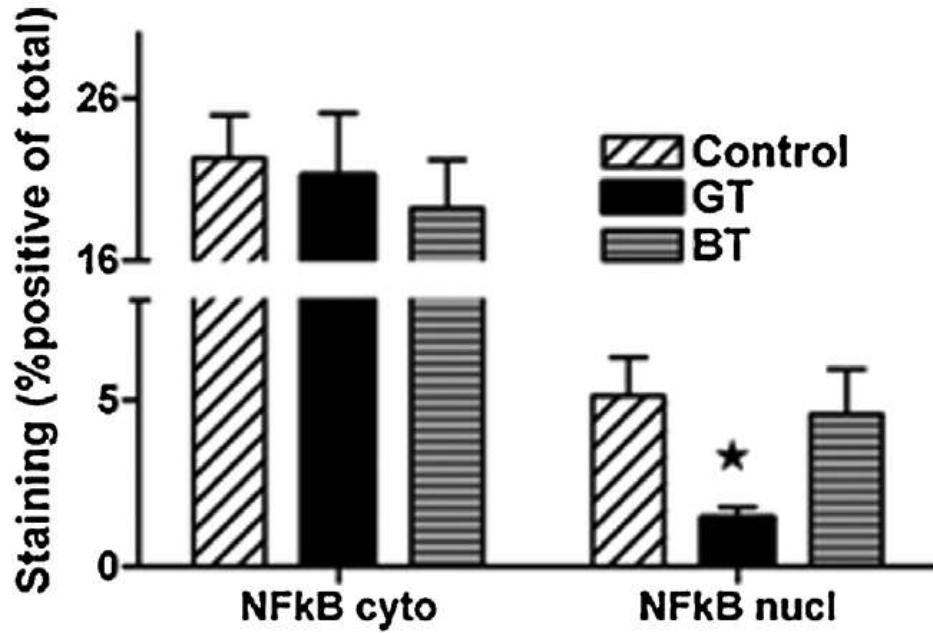

---

**TABLE I. Baseline Characteristics of Study Population (mean  $\pm$  s.d.)**

	Water <sup>a</sup>	GT	BT	P-value
N	33	34	26	
Age	62.8 $\pm$ 6.2	62.1 $\pm$ 6.9	61.4 $\pm$ 7.4	0.93
Weight (kg)	86.6 $\pm$ 14.3	85.7 $\pm$ 12.2	89.9 $\pm$ 13.4	0.47
Height (cm)	175 $\pm$ 22	176 $\pm$ 21	175 $\pm$ 22	0.98
BMI (kg/m <sup>2</sup> )	27.4 $\pm$ 4.9	27.2 $\pm$ 3.8	27.4 $\pm$ 3.6	0.98
Intervention (days)	29 $\pm$ 7.9	33 $\pm$ 23	31 $\pm$ 10	0.60
Compliance (%)	93 $\pm$ 12	95 $\pm$ 10	92 $\pm$ 13	0.75
Biopsy Gleason Score (%)				
6	14 (42)	18 (53)	13 (50)	0.74
7 (3 + 4)	15 (45)	11 (32)	9 (35)	
7 (4 + 3)	3 (9)	3 (9)	2 (8)	
>8	1 (3)	2 (6)	2 (8)	
Race/Ethnicity (%)				
Asian	0 (0)	1 (3)	3 (12)	0.14
Black	6 (18)	5 (15)	6 (23)	
Hispanic	3 (9)	1 (3)	4 (15)	
White	23 (70)	27 (80)	13 (50)	
Other	1 (3)	0 (0)	0 (0)	
Serum PSA (ng/mL)	9.9 $\pm$ 8.5	9.6 $\pm$ 5.2	9.2 $\pm$ 4.3	0.93

<sup>a</sup>green tea (GT), black tea (BT), body mass index (BMI), prostate-specific antigen (PSA)

**Fig. I.** Immunostaining of (A) Ki67, TUNEL and 8OHdG; (B) Bcl-2 and Bax; (C) nuclear and cytoplasmic NFκB in radical prostatectomy malignant epithelium from men consuming GT (29), BT (24) or water (30); mean  $\pm$  std; \*P < 0.05.

---

---

**TABLE III. Prostate Specific Antigen Concentrations in Serum Collected from Men Consuming GT, BT or Water Control Collected at Baseline and on the Morning of Radical Prostatectomy (Post-Intervention)**

---

	Serum PSA (ng/mL) <sup>a</sup>		
	Water	GT	BT
PSA baseline	9.9 ± 8.5	9.6 ± 5.2	9.2 ± 4.3
PSA post-intervention	10.0 ± 9.0	8.4 ± 4.3*	9.6 ± 6.0

---

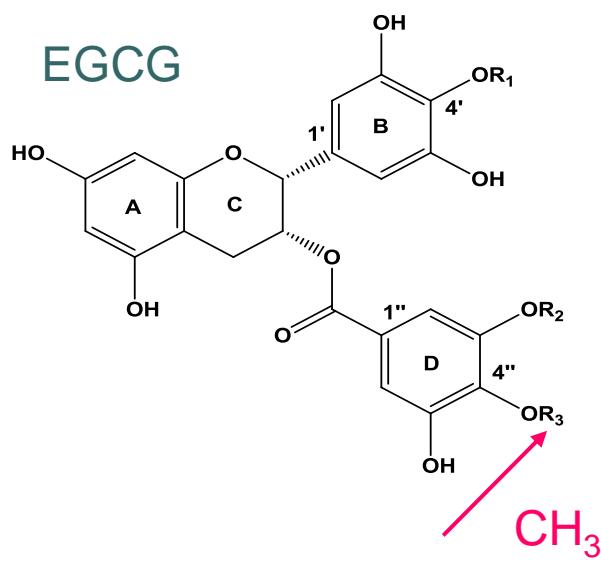

Data are presented as mean ± std; n = 30 (control), 30 (GT) and 23 (BT).

\*PSA changes from pre to post were compared between the 3 groups using Analysis of Variance with pairwise contrasts,  $P < 0.05$ .

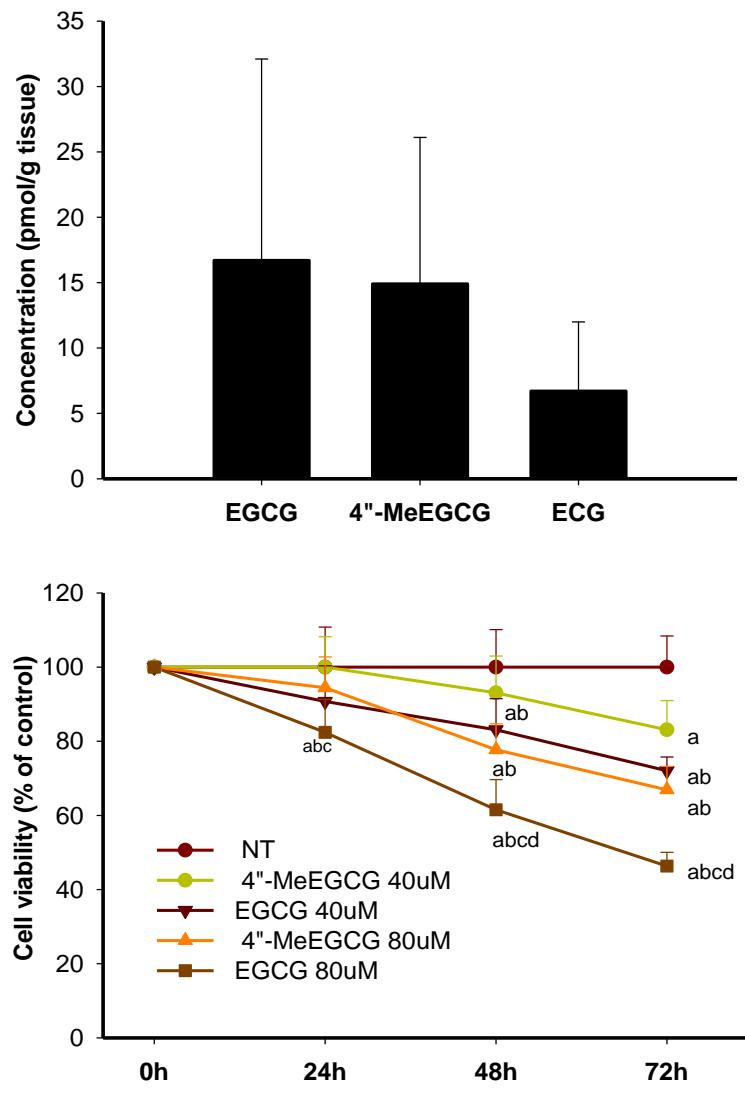

<sup>a</sup>green tea (GT), black tea (BT), prostate specific antigen (PSA).

# Limitations of GT in chemoprevention

- Low bioavailability of GT polyphenols
- Extensively methylation in vivo

Catechol-O-methyltransferase (COMT)

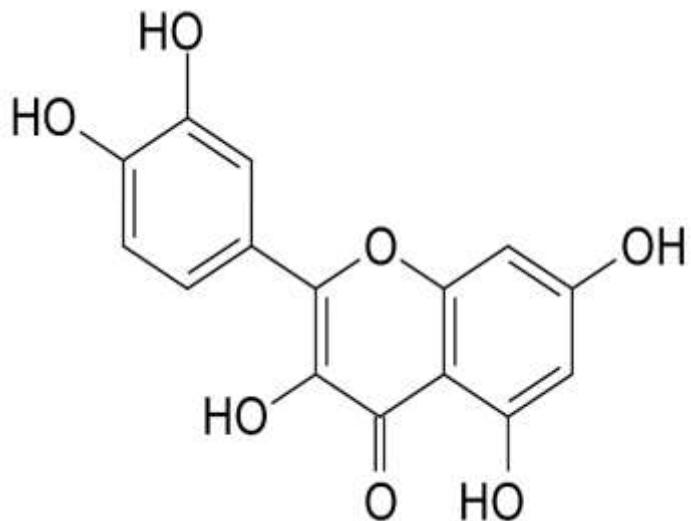

(Wang P, et al. 2010 Cancer Prev Res 3(8):985-93)

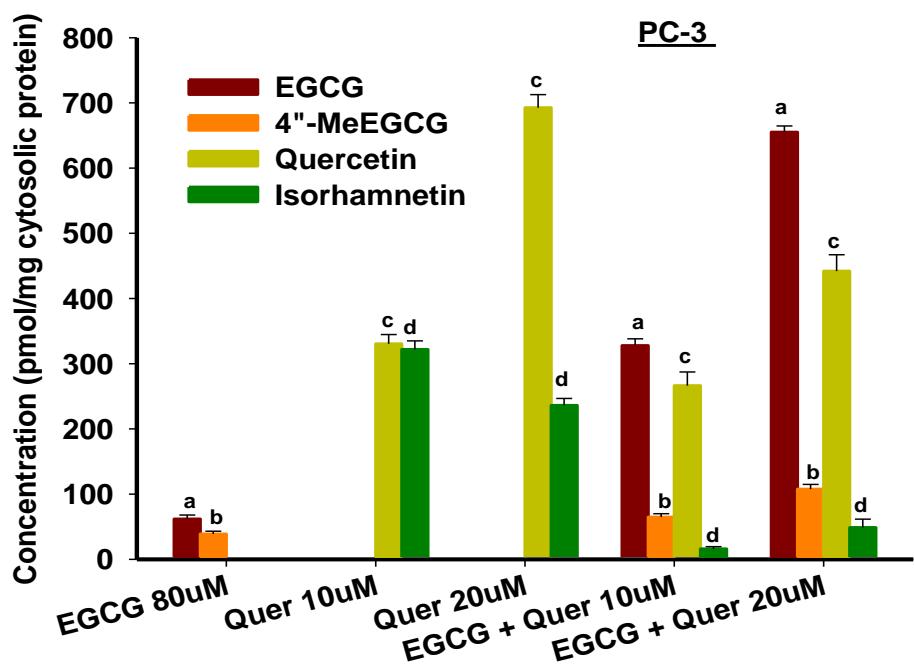

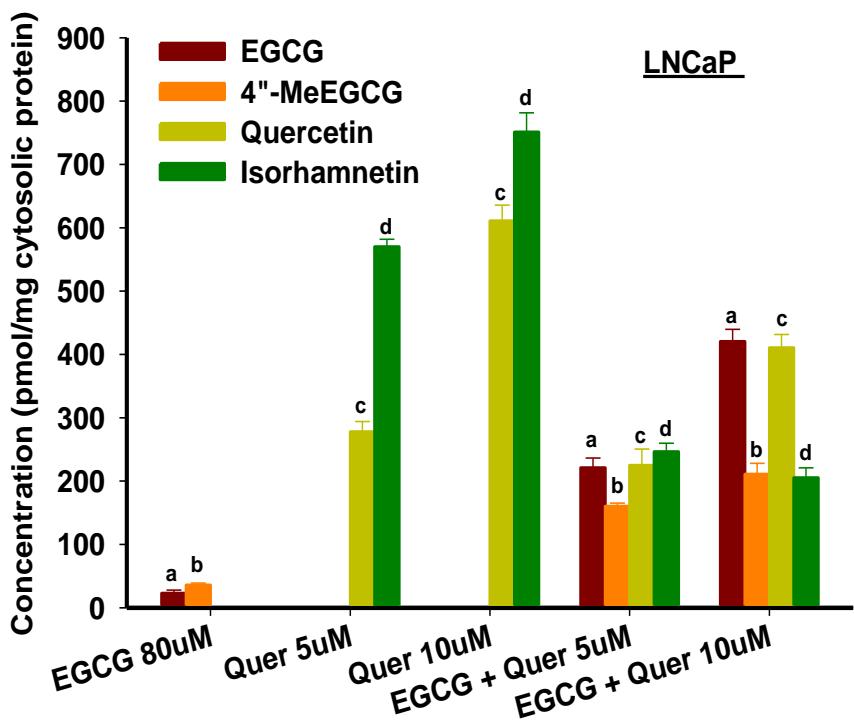

# Quercetin (Q)

---

- A flavonoid commonly found in fruits and vegetables - red onions, apples, broccoli, berries, and tea
- A natural inhibitor of catechol-*O*-methyltransferase (COMT) and multidrug resistance-related proteins (MRPs)

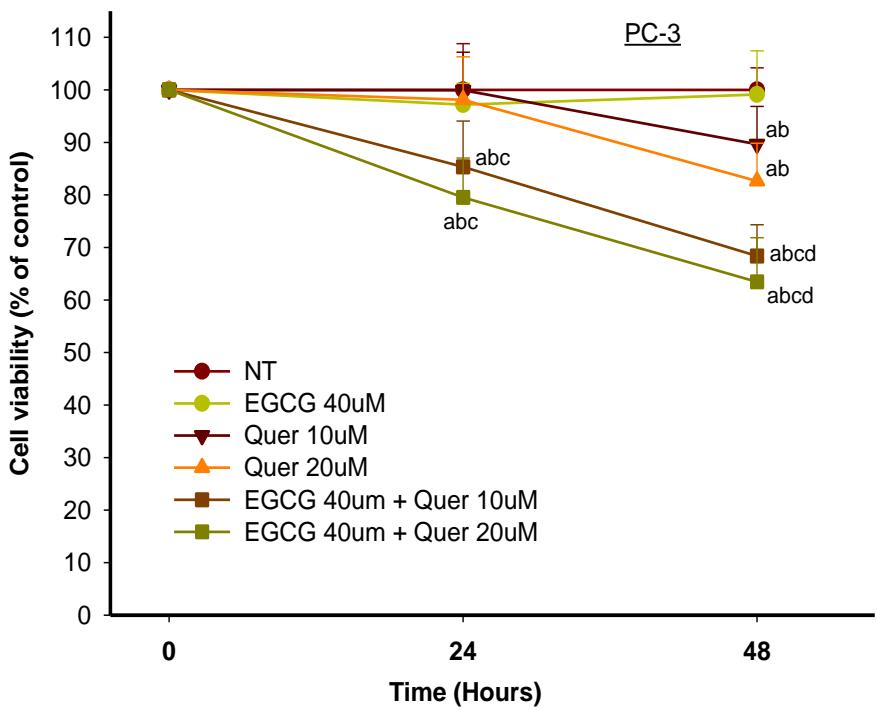

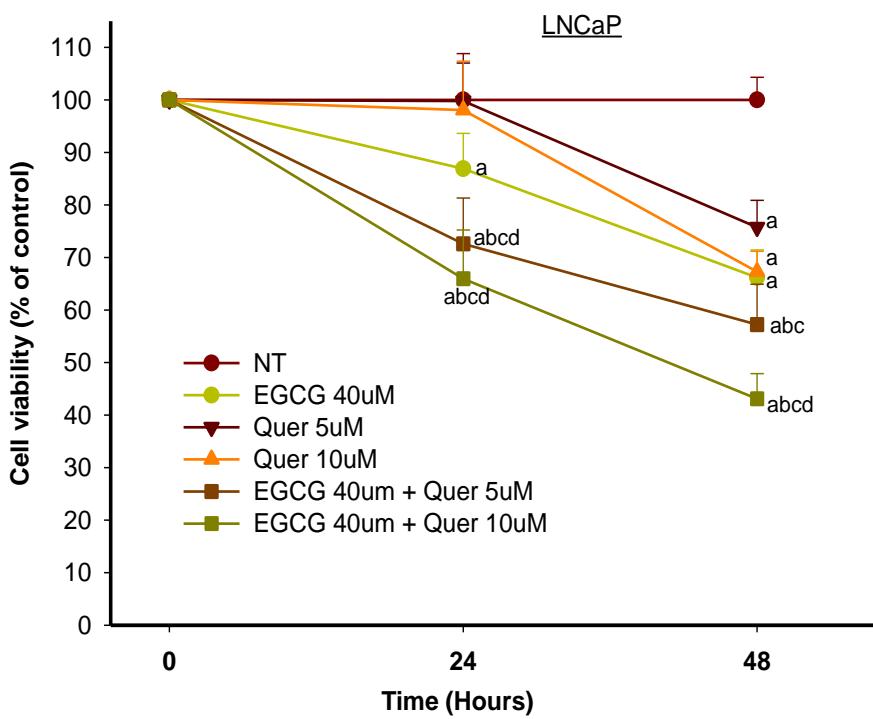

# Quercetin in combination with EGCG in vitro – cellular absorption

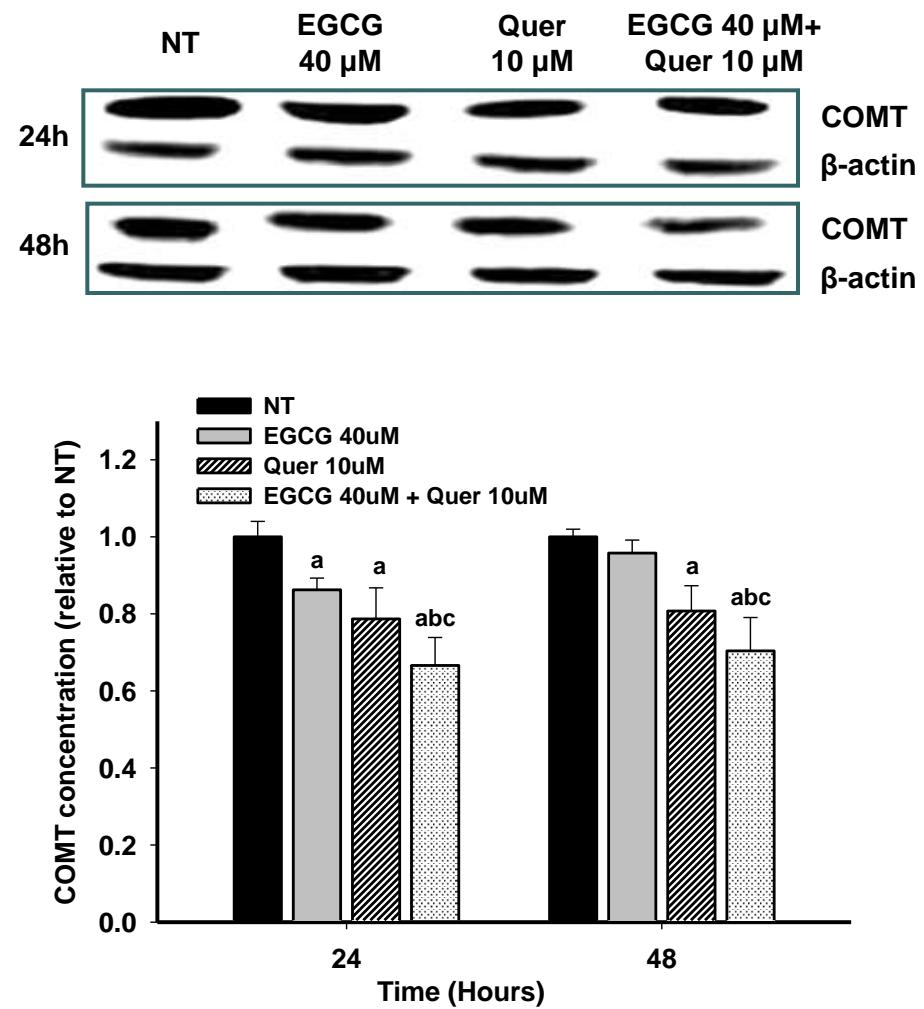

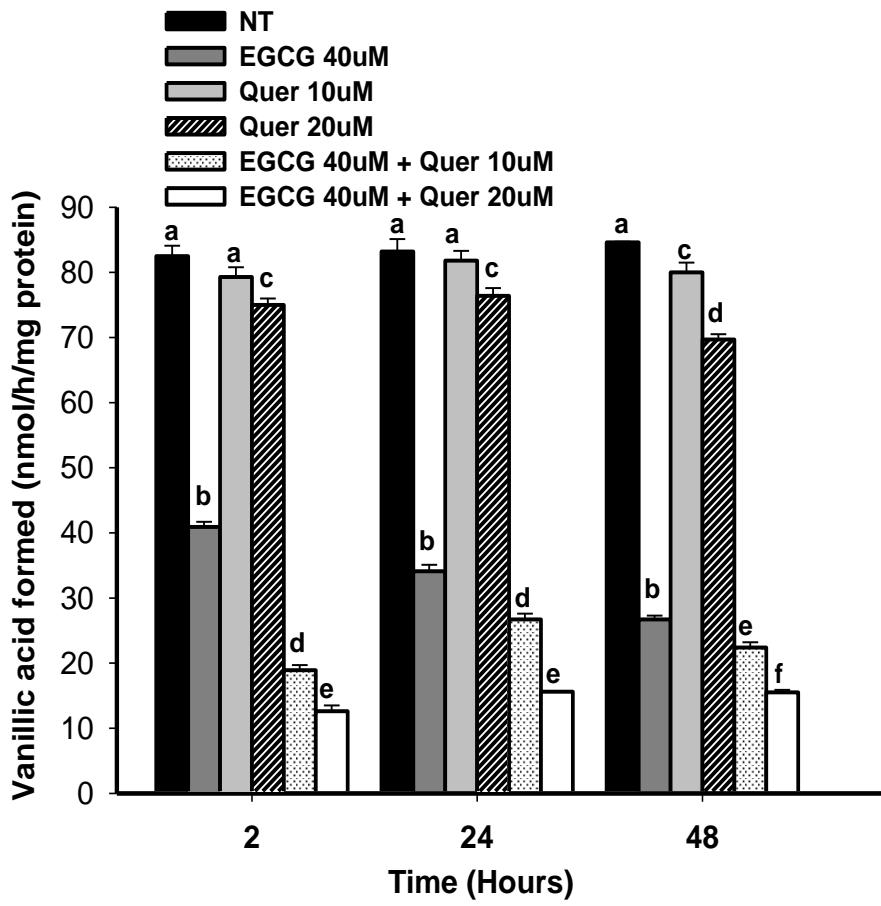

The groups with the same superscript letter represent significant difference between groups ( $P<0.05$ )

# Quercetin in combination with EGCG in vitro – Antiproliferative effect

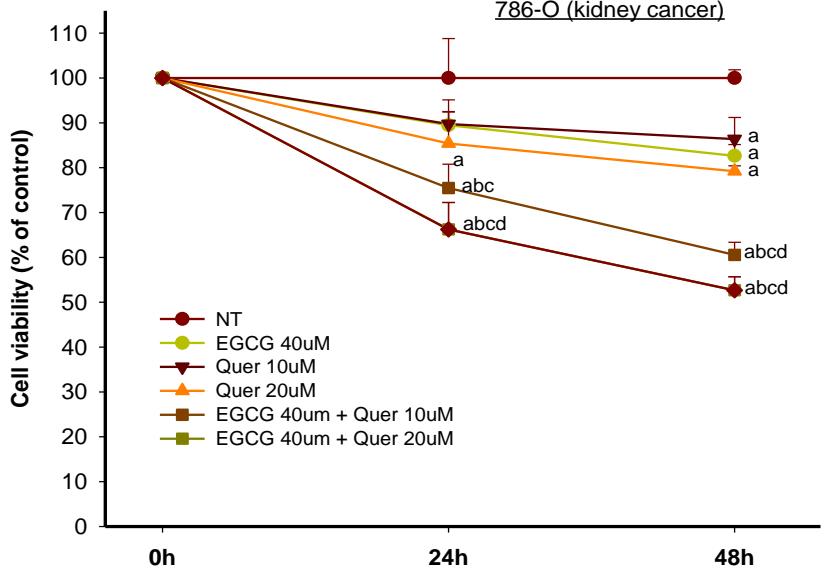

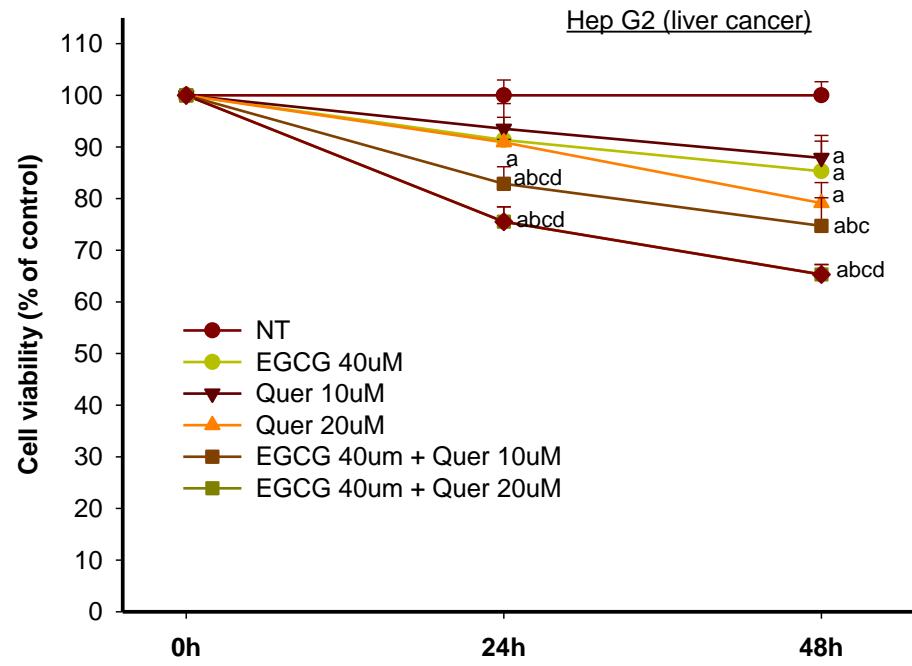

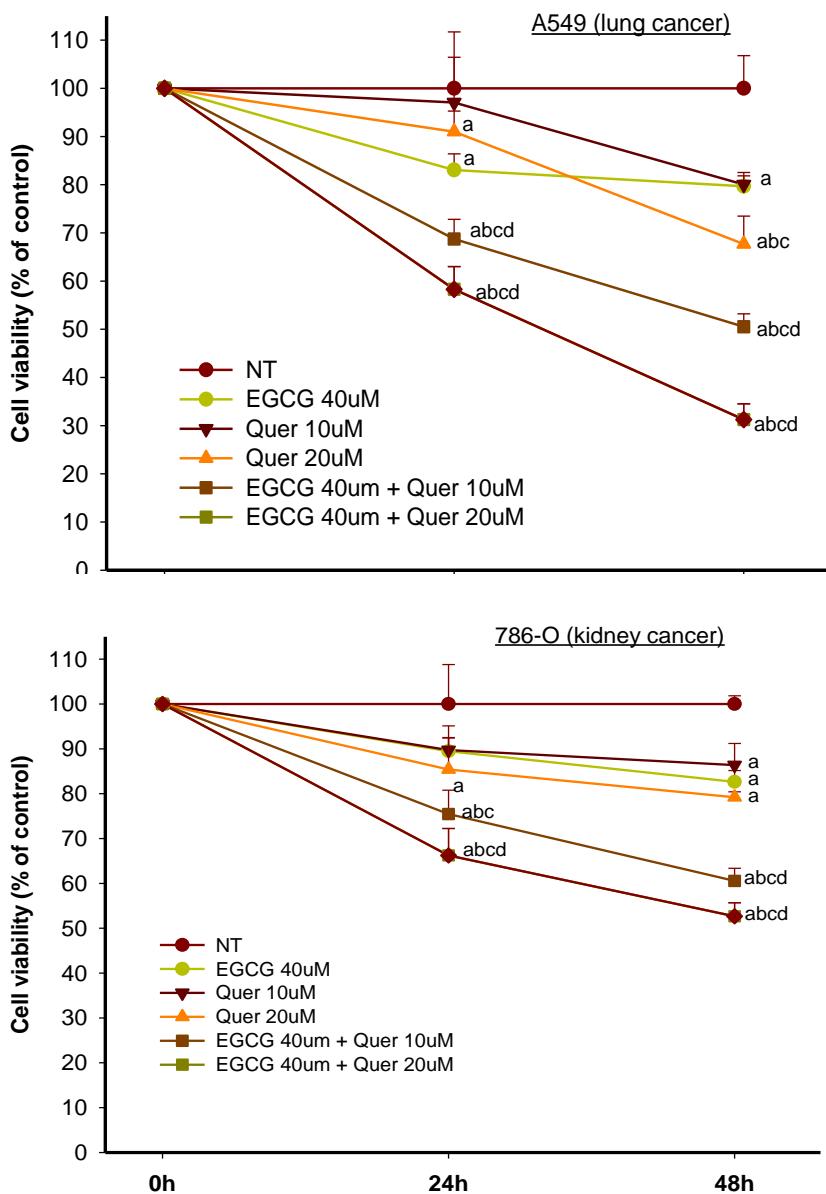

Compared to – a, control (NT); b, EGCG; c, Q 5umol/L; d, Q 10umol/L, p<0.05

# Quercetin in combination with EGCG in vitro – COMT inhibition

# Increased anti-proliferative effect by EGCG + Q in lung, liver and kidney cancer cells

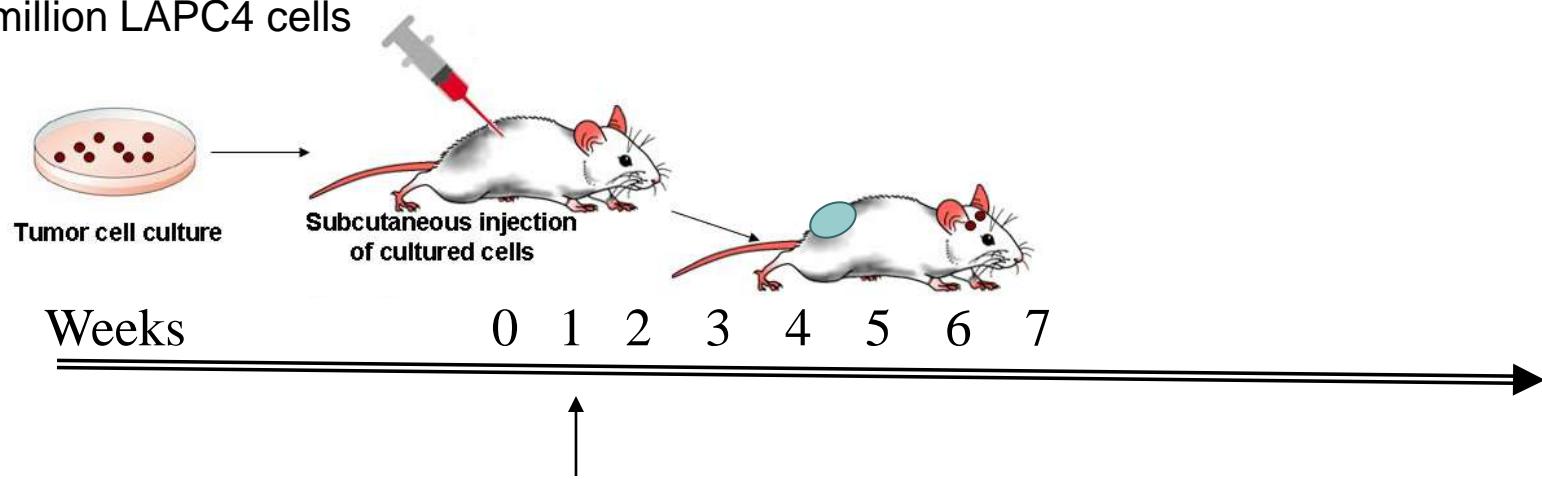

(Wang P, et al. 2012 Food Funct.3(6):635-42)

# Xenograft SCID mouse model

---

0.5 million LAPC4 cells

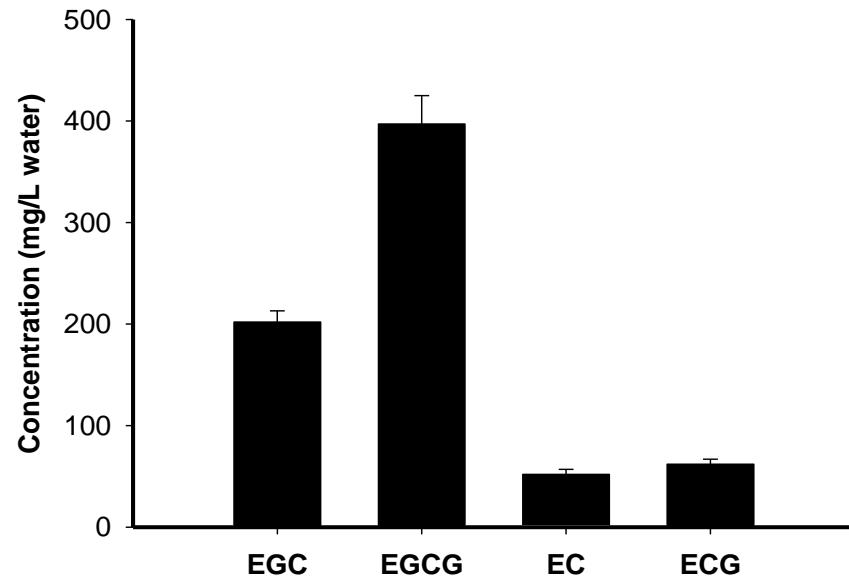

When tumor was palpable - start of intervention

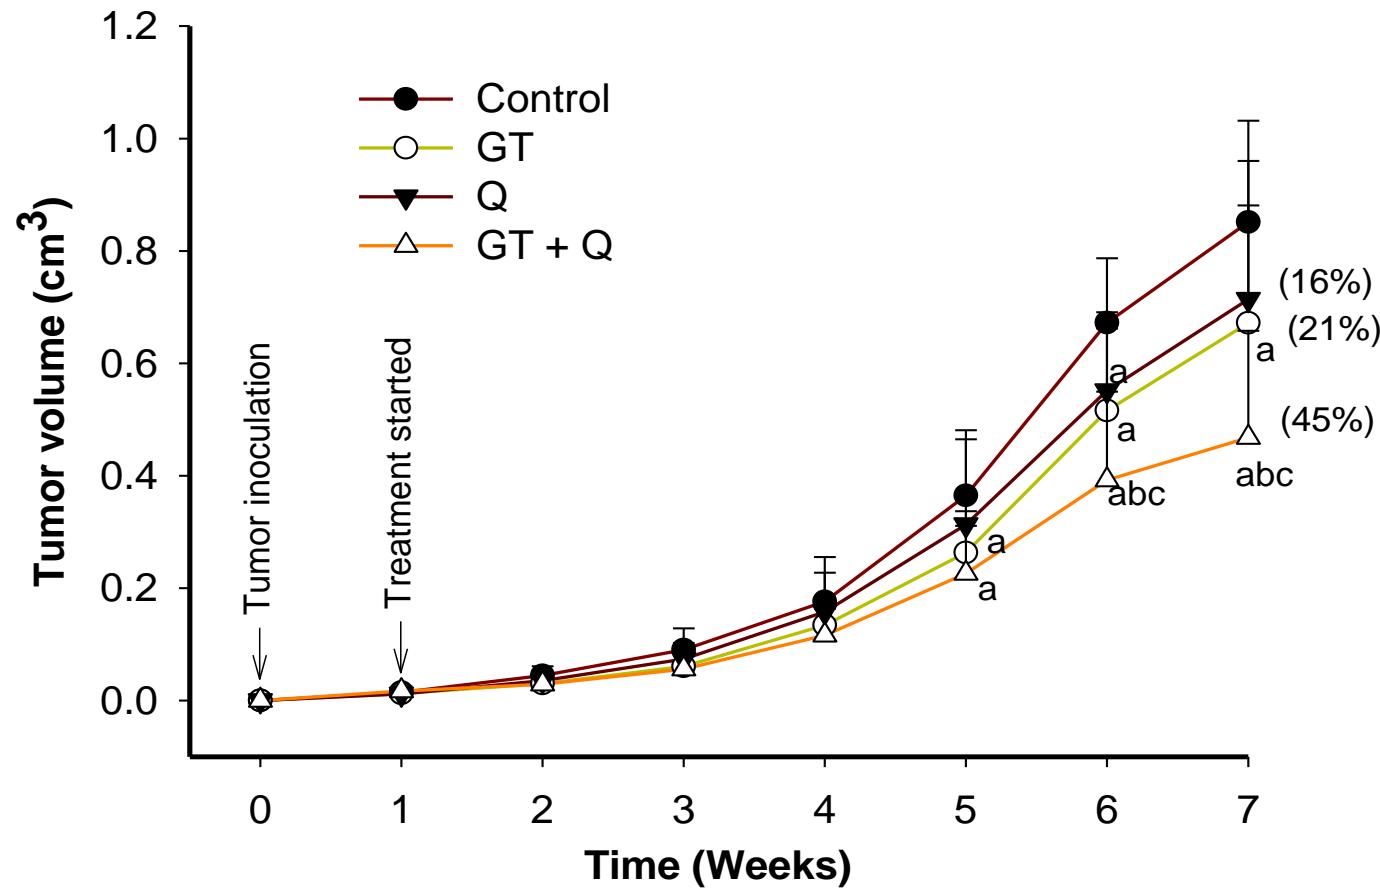

# Quercetin in combination with GT in SCID mice

---

- GT (Celestial Seasonings, Boulder, CO): 1 tea bag brewed in 240 ml boiling water for 5min; 0.07% GT polyphenols
  
- Q (Sigma-Aldrich): 0.4% in diet  
AIN 93G+Quercetin

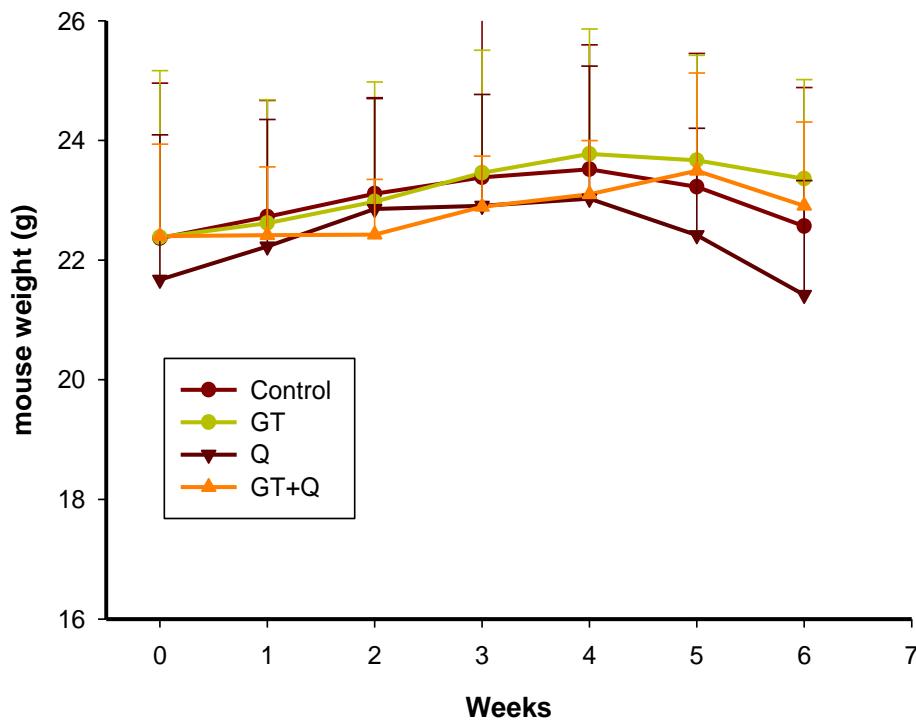

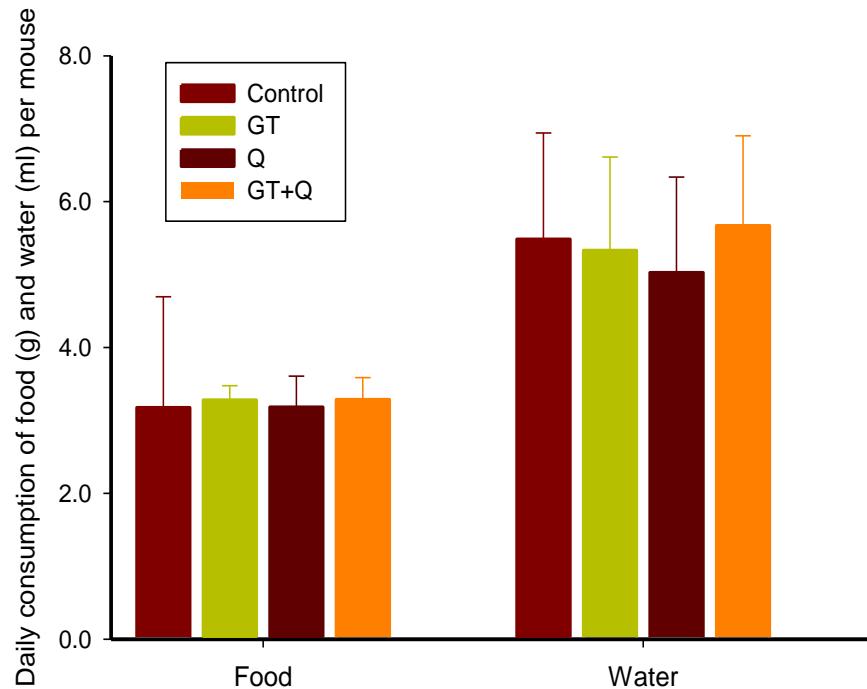

# Xenograft tumor growth

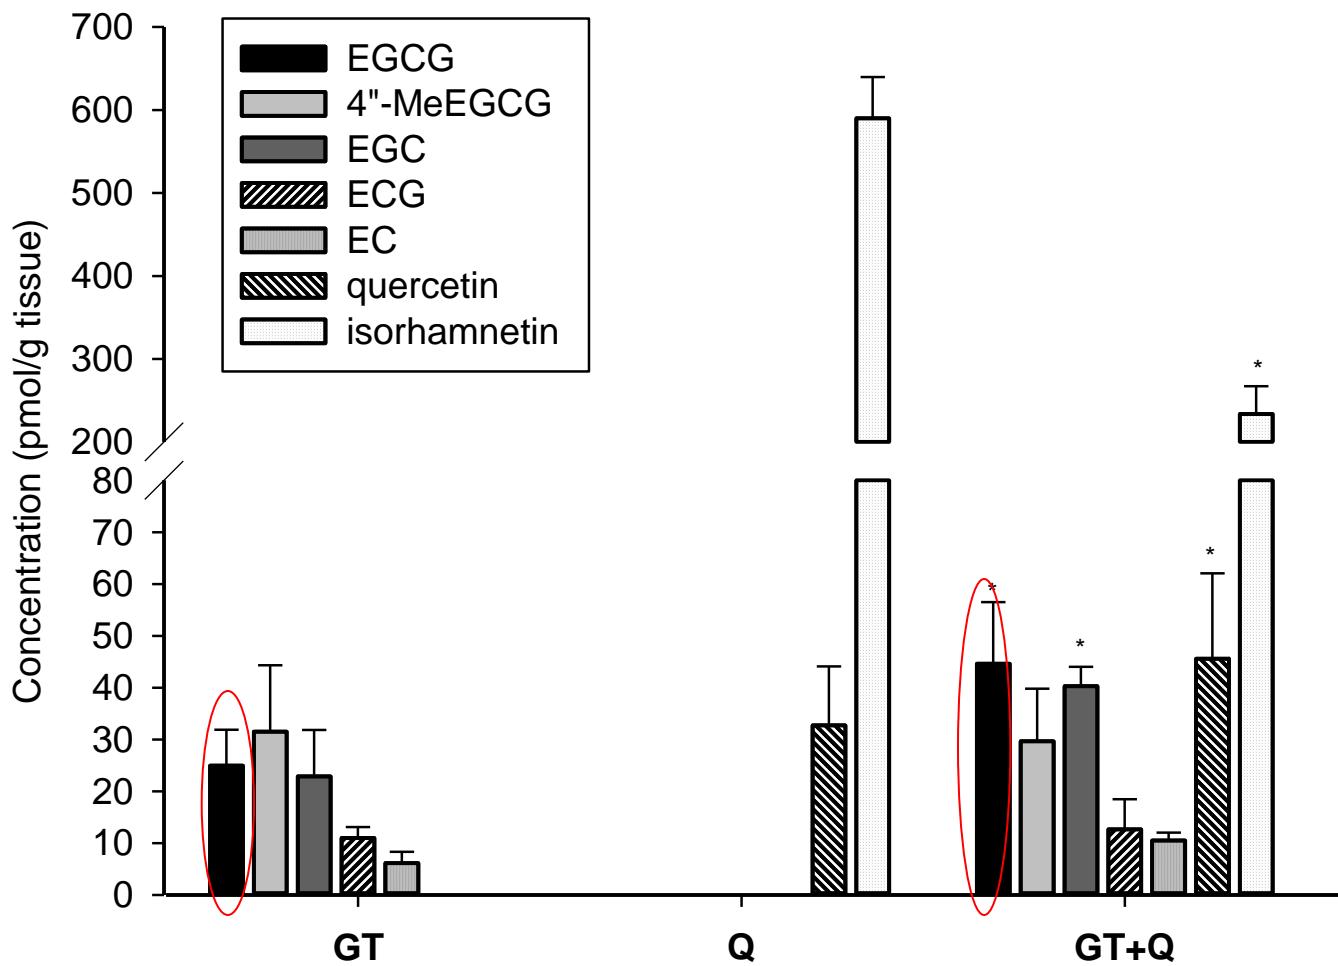

Compared to – a, control group; b, Q group; c, GT group,  $p < 0.05$

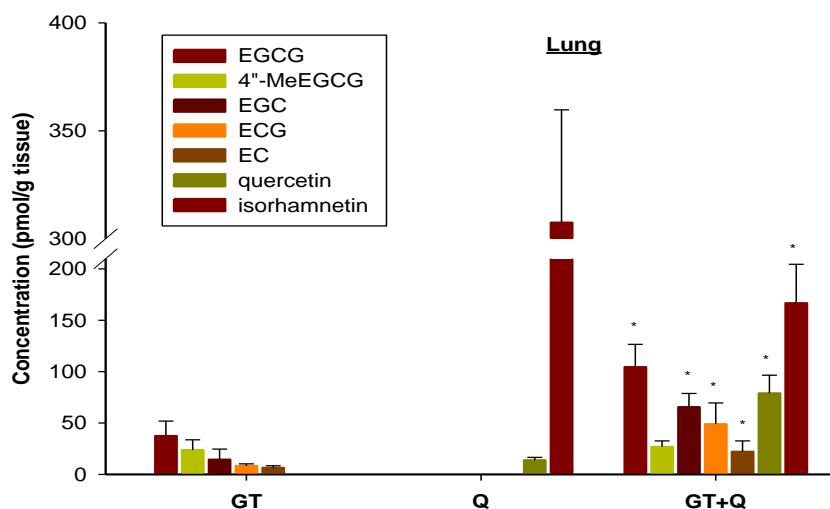

# Food and water consumption and body weight

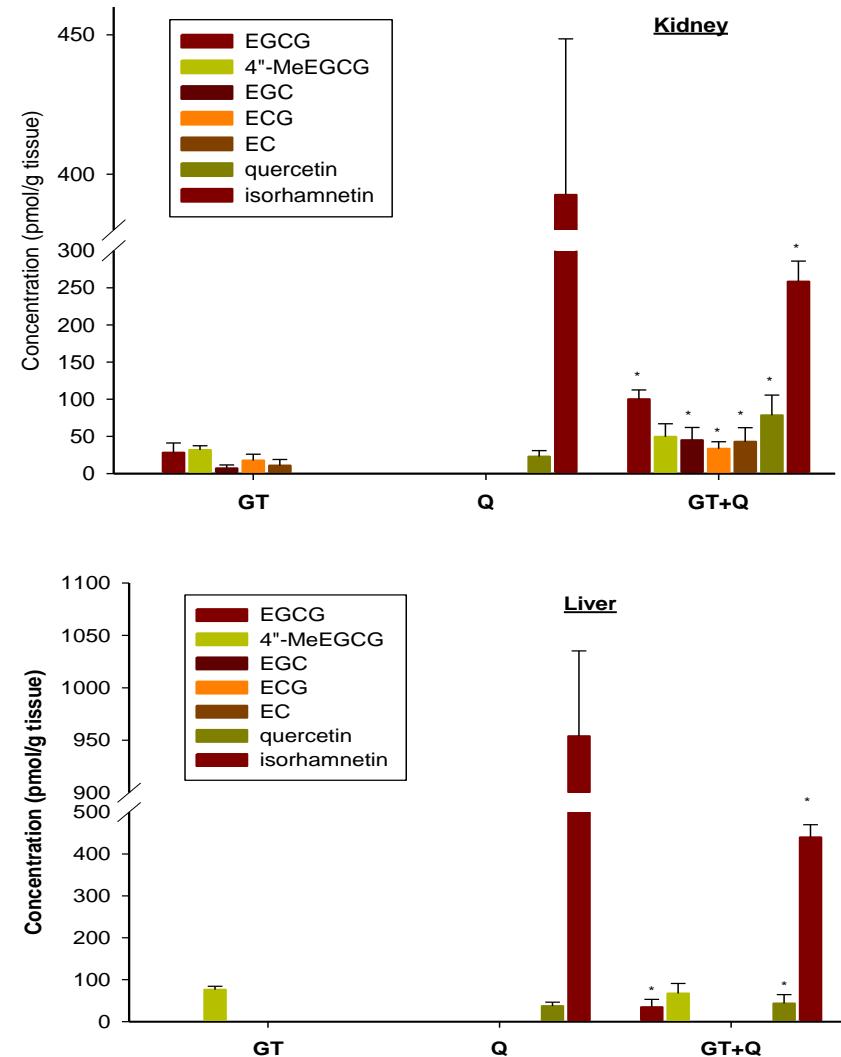

# GT+Q increased the bioavailability and decreased methylation of GT polyphenols in tumor tissues

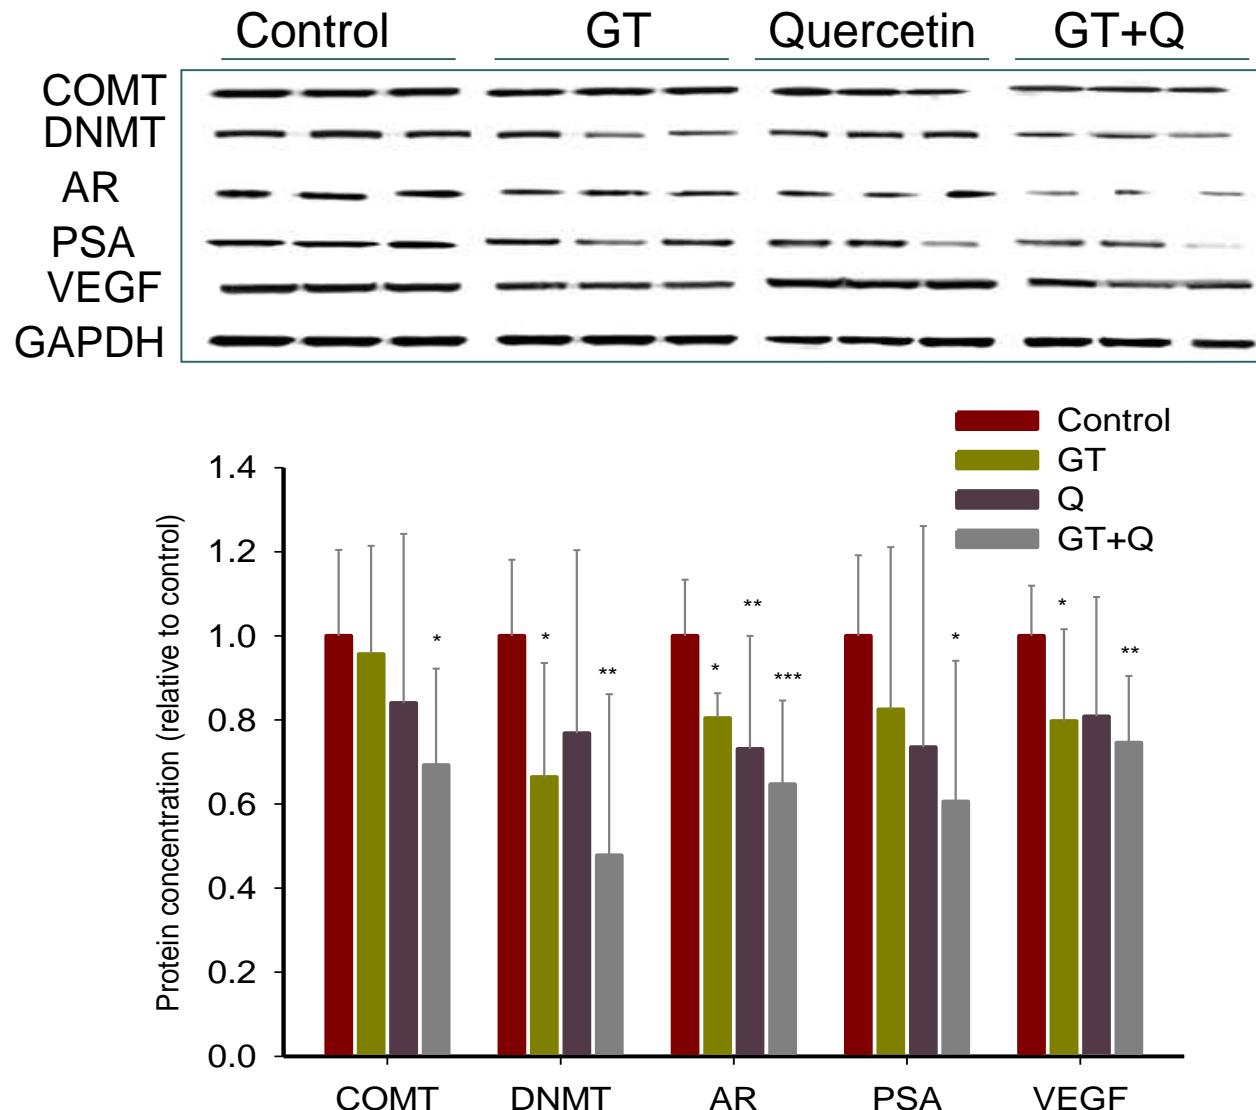

# GT+Q increased the bioavailability and decreased methylation of GTPs in other tissues

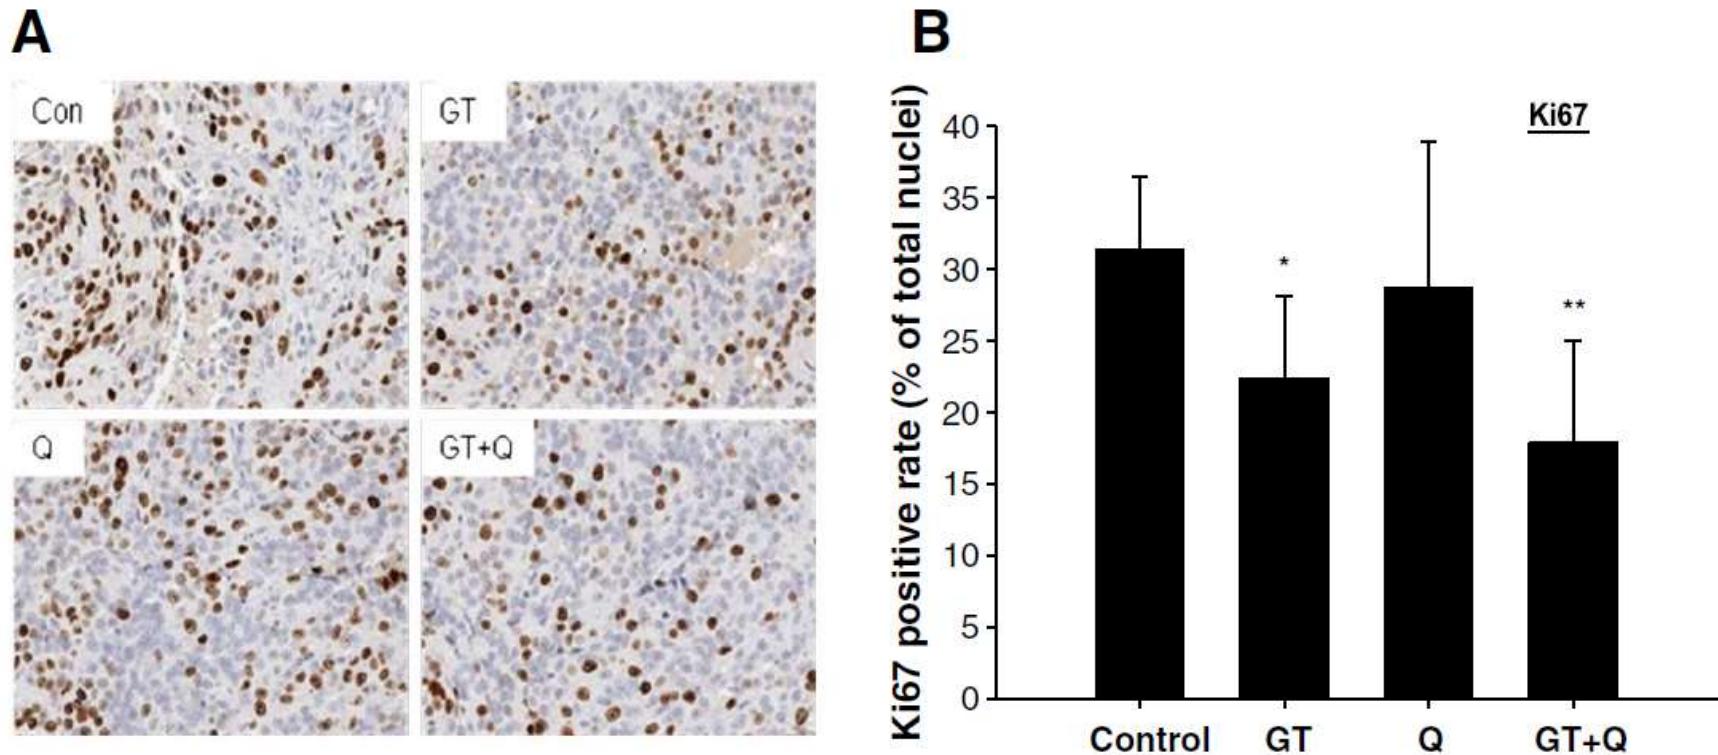

\* compared to individual treatment, p<0.05

# Modulation of protein marker expression

# Inhibition of proliferation marker-Ki67

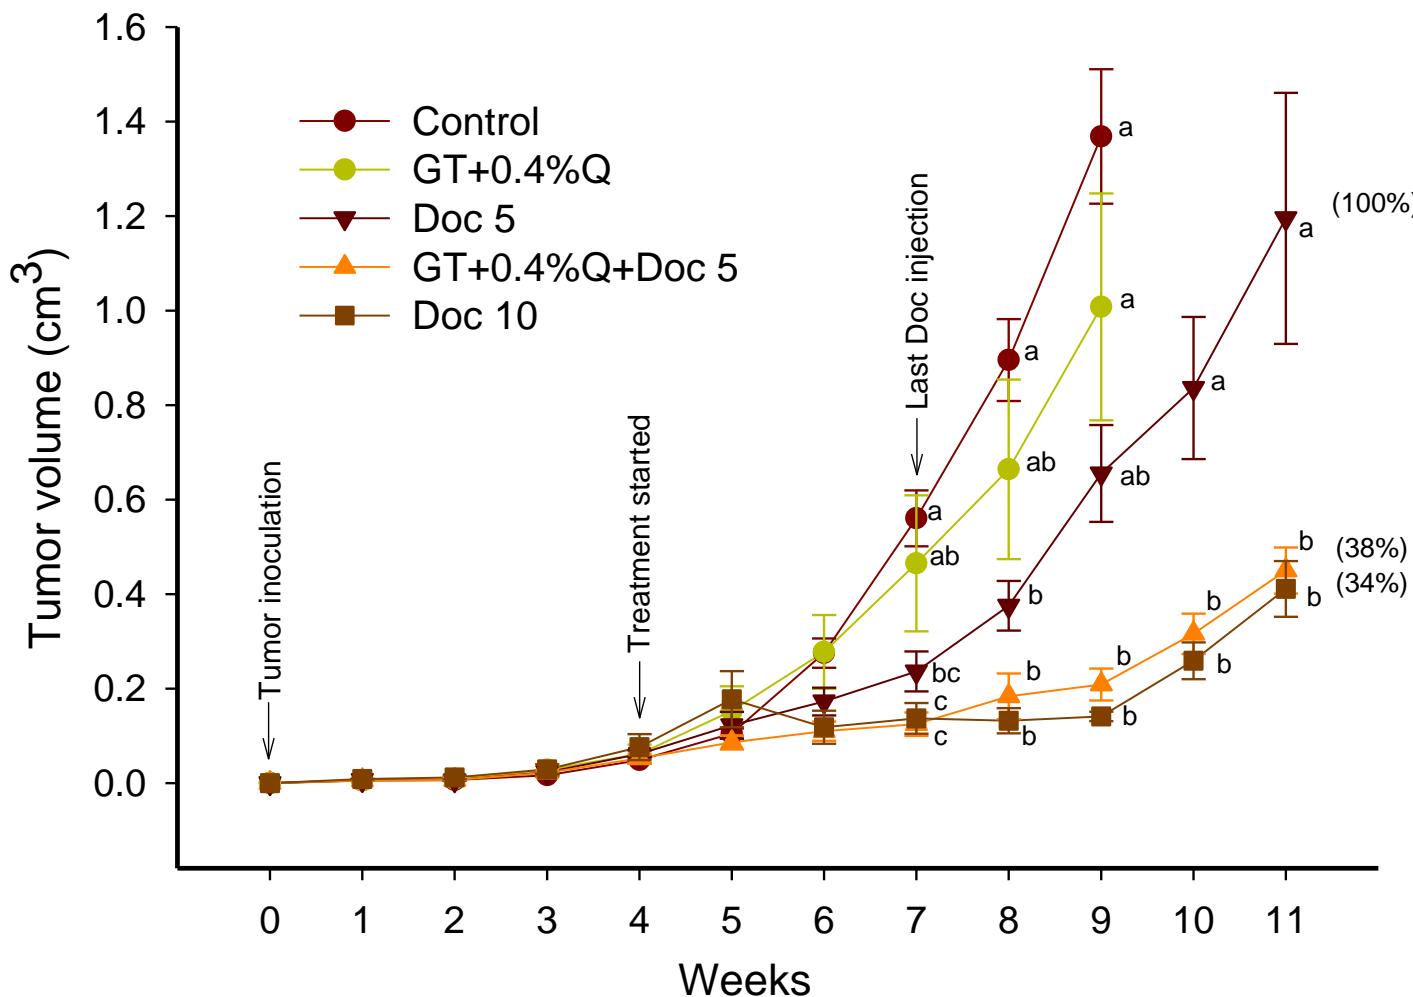

(Wang P, et al. 2014 J Nutr Biochem 25(1):73-80)

---

# GT+Q in combination with drugs for chemotherapy of advanced prostate cancer

# GT+Q+Docetaxel: Enhanced inhibition of PC-3 tumor growth

Data are presented as mean  $\pm$  SE. Different letters at each time point indicate statistically significant difference between groups,  $p < 0.05$  (manuscript submitted)

# Summary and Conclusion

---

- Quercetin in combination with GT significantly enhances the anti-carcinogenic effect in vitro and in vivo
- The combined effect was associated with an increased bioavailability and decreased methylation of GT polyphenols
- These results warrant future studies to confirm the synergistic effect of the combination of GT and quercetin in humans
- In addition, this combination may improve clinical application in treatment of advanced prostate cancer by sensitizing tumor cells to chemotherapy
