

Molecular Characterization and management of Tomato leaf curl virus and its vector, *B. tabaci*, using cultural methods like guard crops and mulches in Tomato.

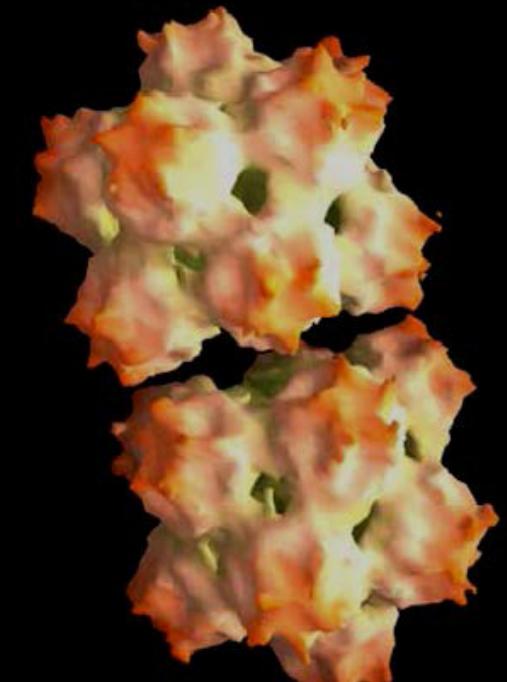

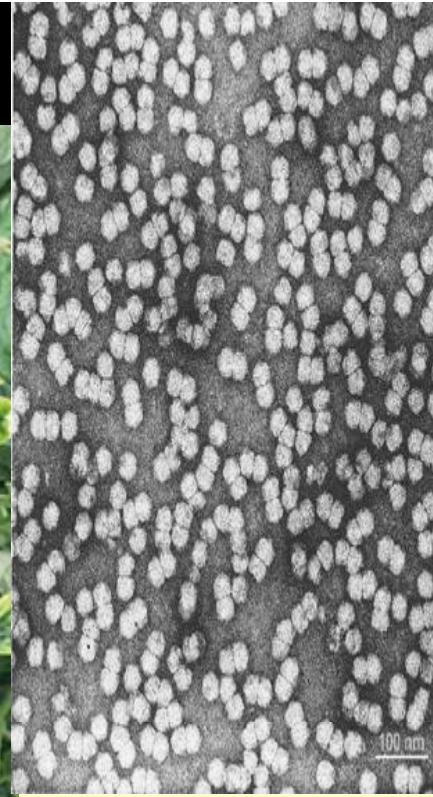

Dr. Mandali Rajasri
Sr. Scientist (Entomology)
P.J.T.S.Agril. University
Hyderabad, India

Introduction

- Tomato- most important vegetable crop & Rich source of Vit A ,C ,other minerals ,Lycopene ,carotinoids and anti-oxidants etc.,
- Tomato leaf curl virus (*ToLCV*), Geminiviridae is an important viral disease in tomato .
- Symptoms - Upward curling ,reduction in size of new leaves, slight chlorosis, crinkling and puckering of leaflets, stunting of plants.
- Whitefly, *B.tabaci* - Polyphagous, Biotypes, insecticide resistance, vector of viral diseases .
- Information -*ToLCV* incidence, viral strains, whitefly biotypes and their role in Tomato leaf curl transmission .

Tomato Leaf curl virus

- + Upward curling
- + reduction in size of new leaves,
slight chlorosis,
- + crinkling and puckering of leaves
- + stunting of plants.

Monopartite

Tomato leaf curl Kerala virus (ToLCKeV) - Dr SK Mukherjee, ICGEB

Tomato leaf curl Ranchi virus (ToLCRnV) - Dr S Chakraborty, JNU

Tomato leaf curl Patna virus (ToLCPaV) - Dr S Chakraborty, JNU

Tomato leaf curl Rajasthan virus (ToLCRaV)

Tomato leaf curl Pune virus (ToLCPV) - Dr S Chakraborty, JNU

Tomato leaf curl Lucknow virus (ToLCLuV)

Tomato leaf curl Bangalore virus (ToLCBaV) - Dr VG Malathi, IARI

Tomato leaf curl Karnataka virus (ToLCKaV) - Dr VG Malathi, IARI

Tomato leaf curl Joydebpur virus (ToLCJoV) - Dr VG Malathi, IARI

Tomato leaf curl Gujarat virus (ToLCGuV) - Dr VG Malathi, IARI

Bipartite:

Tomato leaf curl New Delhi virus (ToLCNDV) - Dr VG Malathi, IARI

Tomato leaf curl Palampur virus (ToLCPalV) - Dr VG Malathi, IARI

Whitefly

Bemisia tabaci

- 6 life stages: egg, 4 nymphal instars, adult
- Life cycle can be as short as 2 weeks

Nymphs

- In Favorable conditions, 15 generations per year
- Females Do not Require a male to reproduce
- All stages prefer the underside of leaves

ToLCV- Virus –Vector interaction studies

Whitefly culture maintenance

Virus culture maintenance

Raising healthy plants

Whitefly culture maintenance

- Glass house at NBPGR, Hyderabad

Insect proof cages for vector maintenance

Brinjal - preferred host for whitefly, *B.tabaci*

Maintenance of Tomato plants in *Glass house*

Virus culture maintenance under glass house

Molecular characterisation of *Tomato leaf curl virus*

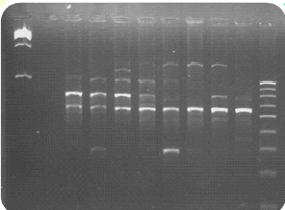

Genomic DNA extraction from ToLCV infected leaf sample

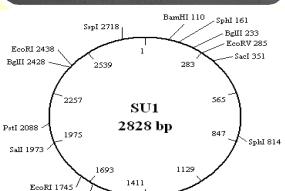

- Gem-CTAB method

Amplification of circular DNA
Rolling circle amplification

Restriction with endo nucleases (BamHI, HindIII, XbaI)

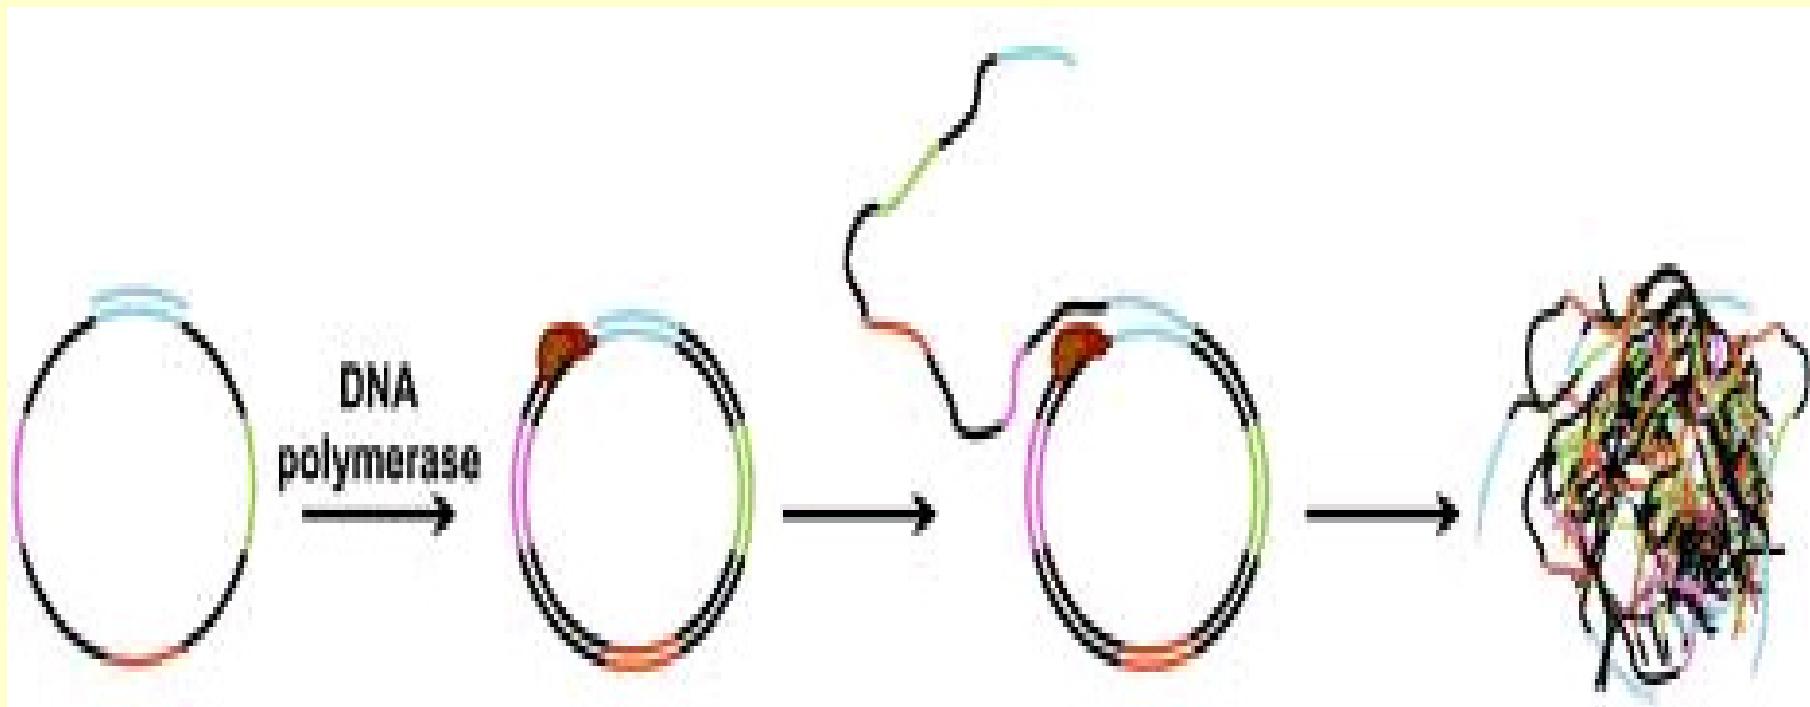

Cloning, Transformation, Screening and Sequencing

*GCGTGAATCCGTGA
TCATGGCAGTTGAT
CGATTGGTAATACG
AACAAACCACACGGT*

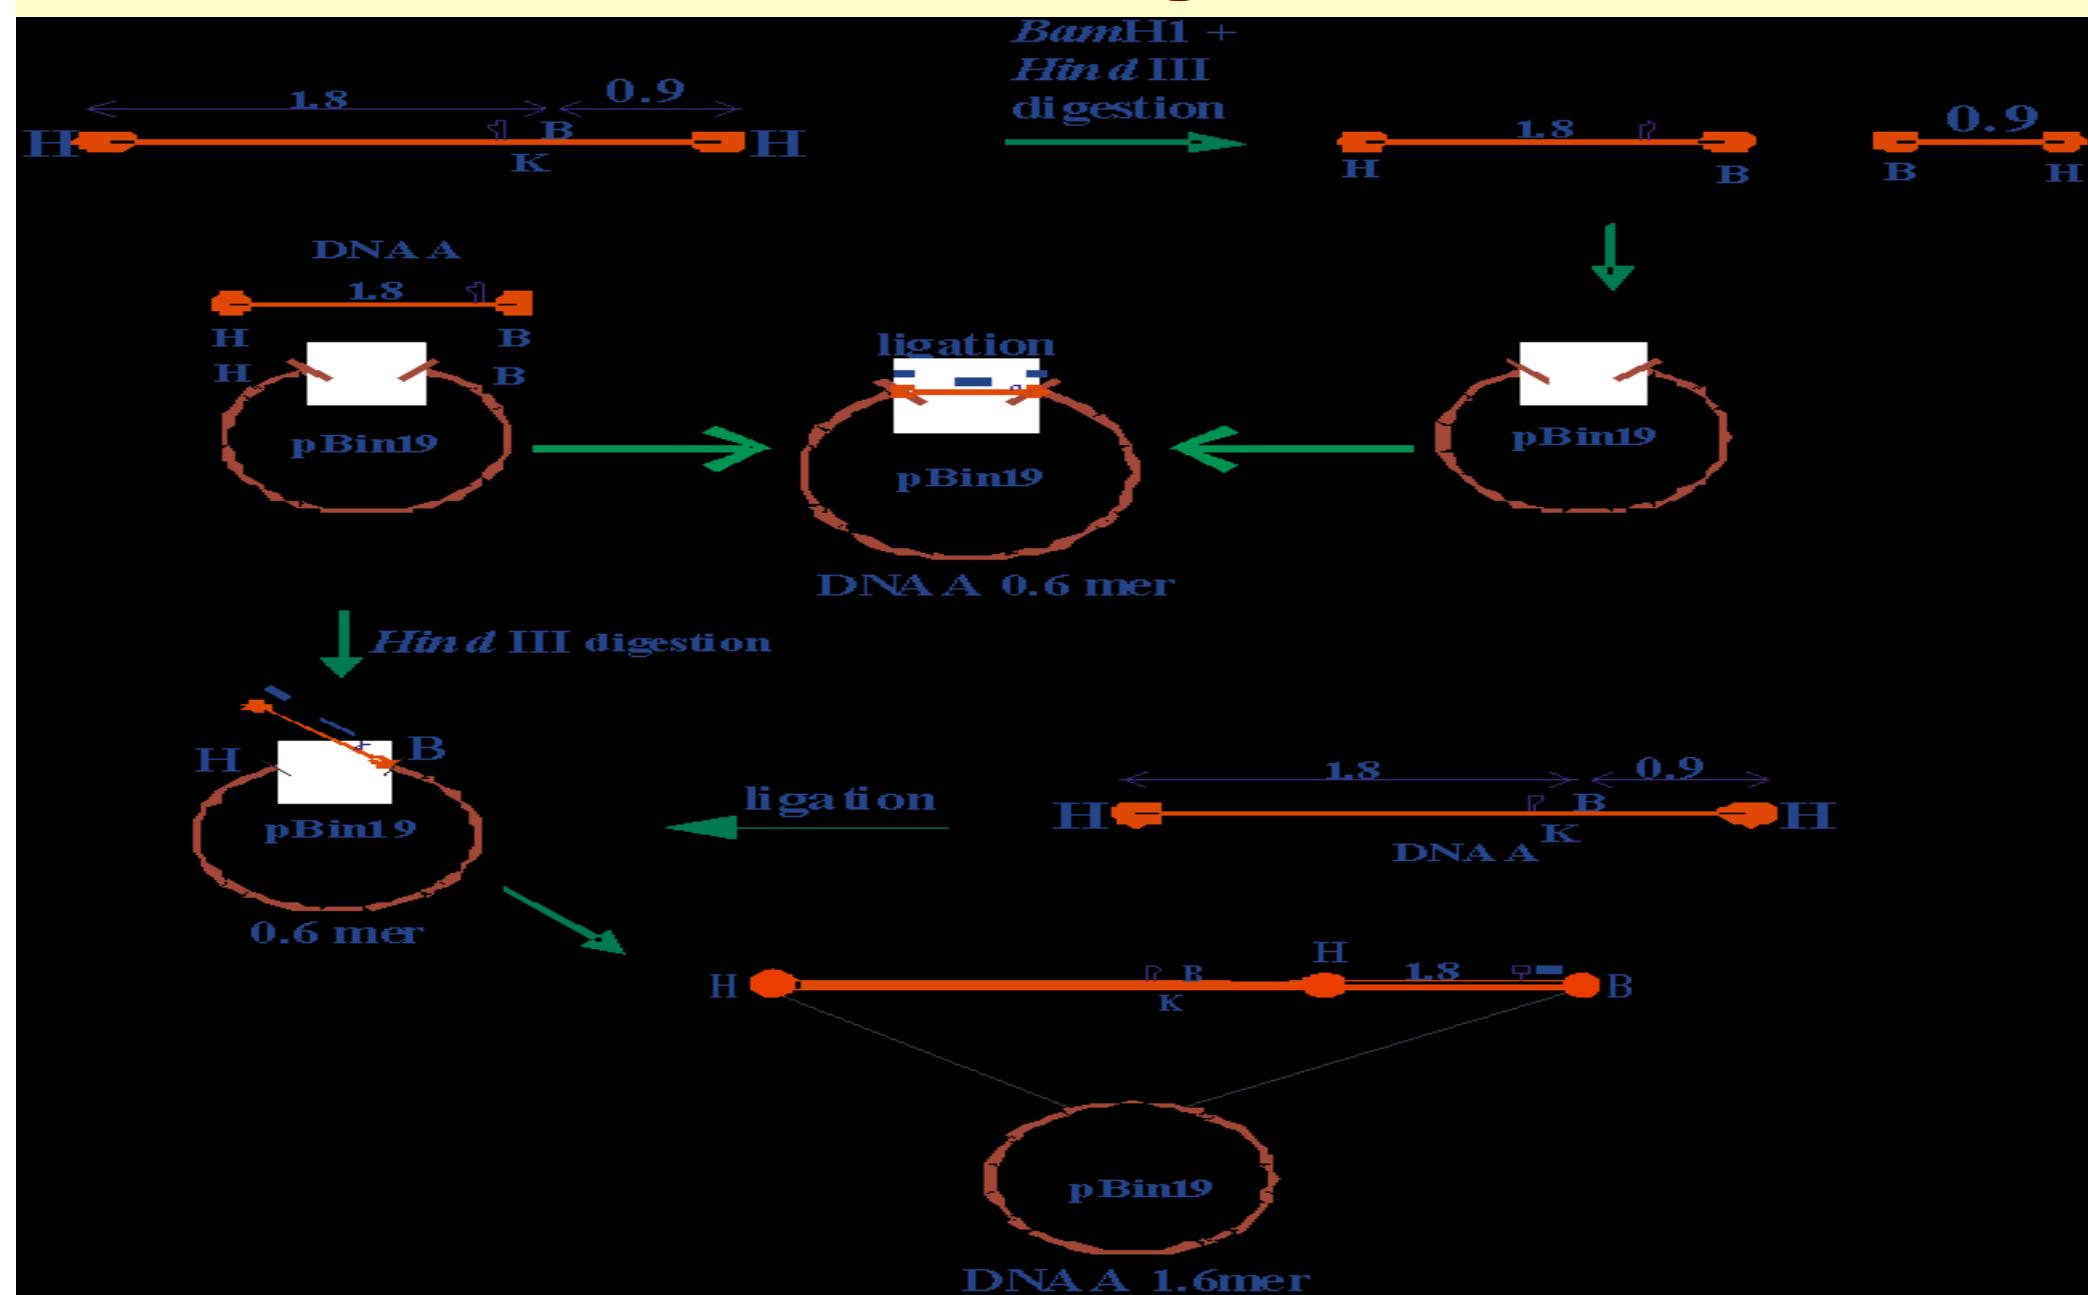

Phylogenetic analysis of genome sequence with selected known sequences in gene bank using blast analysis.

Rolling circle amplification (RCA)

Cloning

Molecular characterization of *Tomato leaf Curl Virus*

Genomic DNA extraction

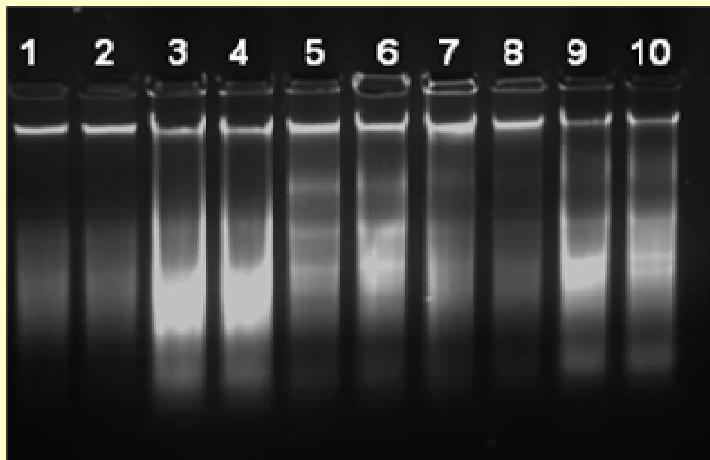

Fig. DNA extraction from tomato leaf curl samples collected from A.P. Lane 1&2 – Hyderabad, 3 &4- Shamshabad 5&6 –Moyirabad,7&8 – Patancheruvu, 9&10-Medak

Rolling circle Amplification (RCA)

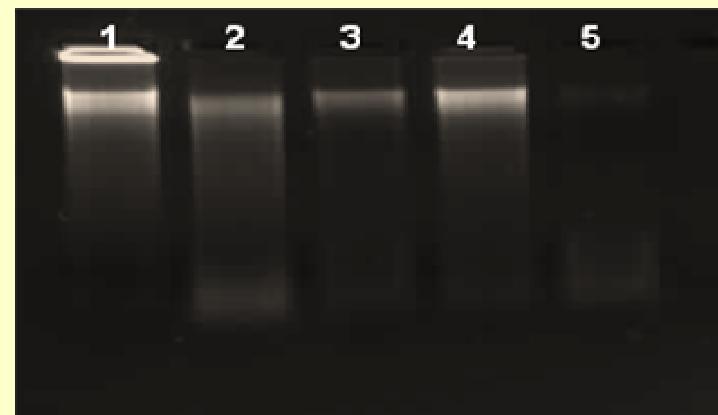

Fig. Agarose gel electrophoresis of RCA product

Restriction with different endonucleases

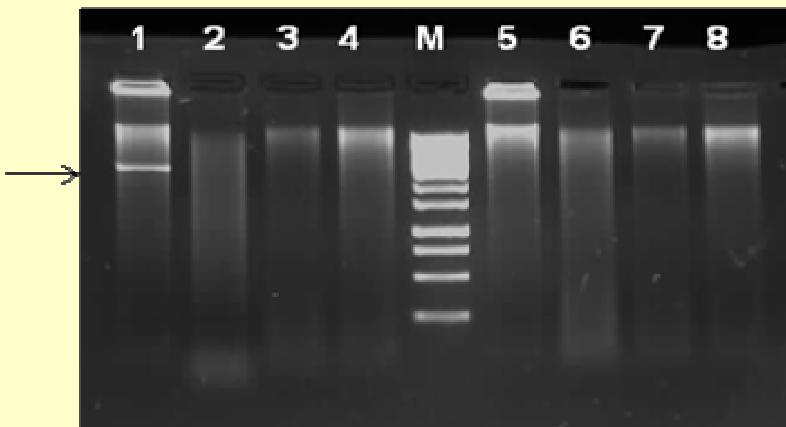

Fig. The RCA product was restricted with BamHI, HindIII, XbaI and KpnI restriction endonucleases 2.7 kb band in lane 1 (Hyderabad sample)

Cloning

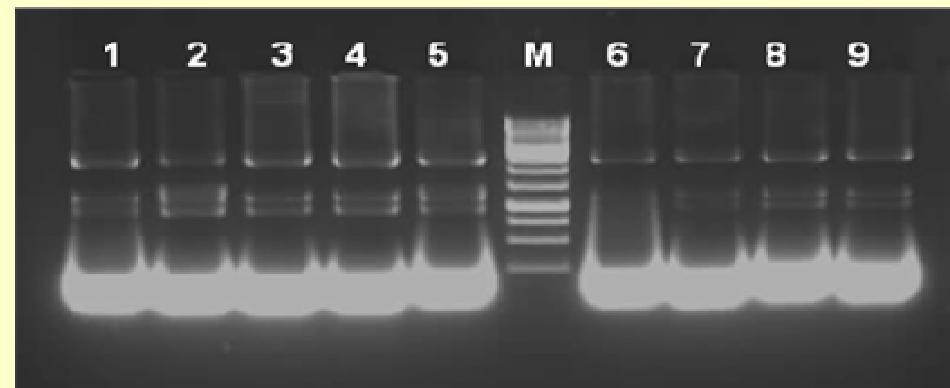

Fig. All clones were showing vector (pUC18) cut into 2 fragments with BamHI/BglI releasing 2.7kb insert.

Phylogenetic sequence analysis of ToLCV through BLAST Analysis

Virus	Query coverage	% identity	Accession no.
ToLCNDV-AVT1	96%	93%	AY42876
ToLCNDV-Svr	99%	93%	U15015
ToLCNDV-Chilli	96%	93%	EU309045

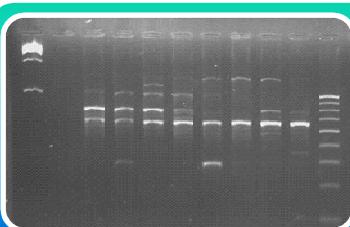

Molecular characterisation of whitefly, *B.tabaci*

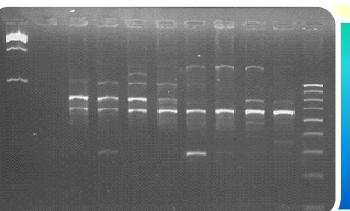

DNA extraction from single whitefly adults using Debarro method

Amplification using Primer OPB-11 in PCR thermocycler

Gel electrophoresis using 1.5% Agarose gel

Documentation of gel pictures using Gel Doc system

RAPD PCR Analysis of Whitefly

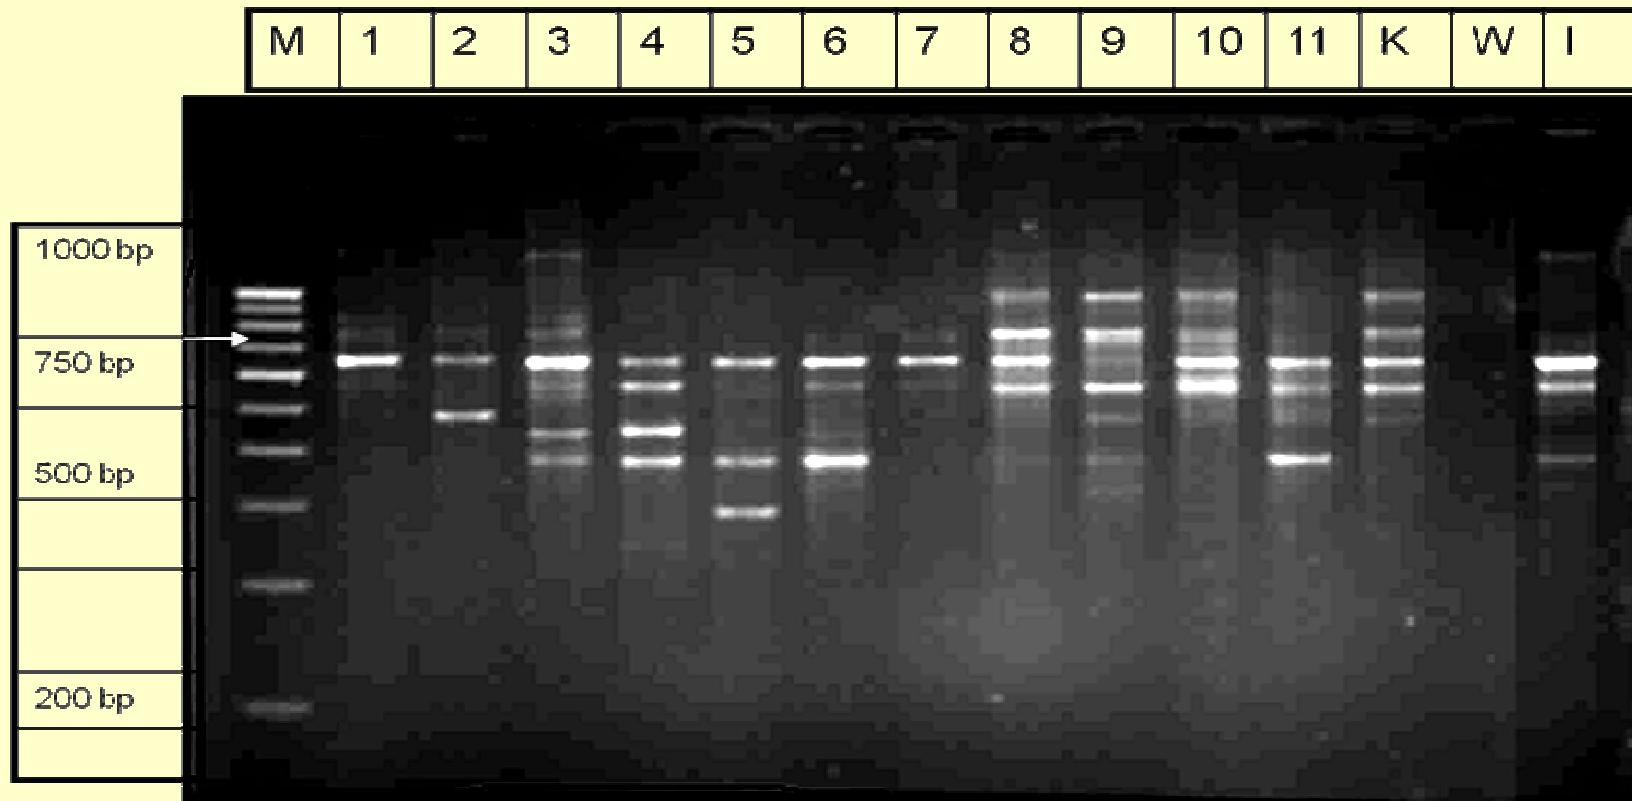

Plate 4:

RAPD PCR analysis of whitefly population from different districts of Andhra Pradesh during Rabi 2007 using OpB 11 primer.

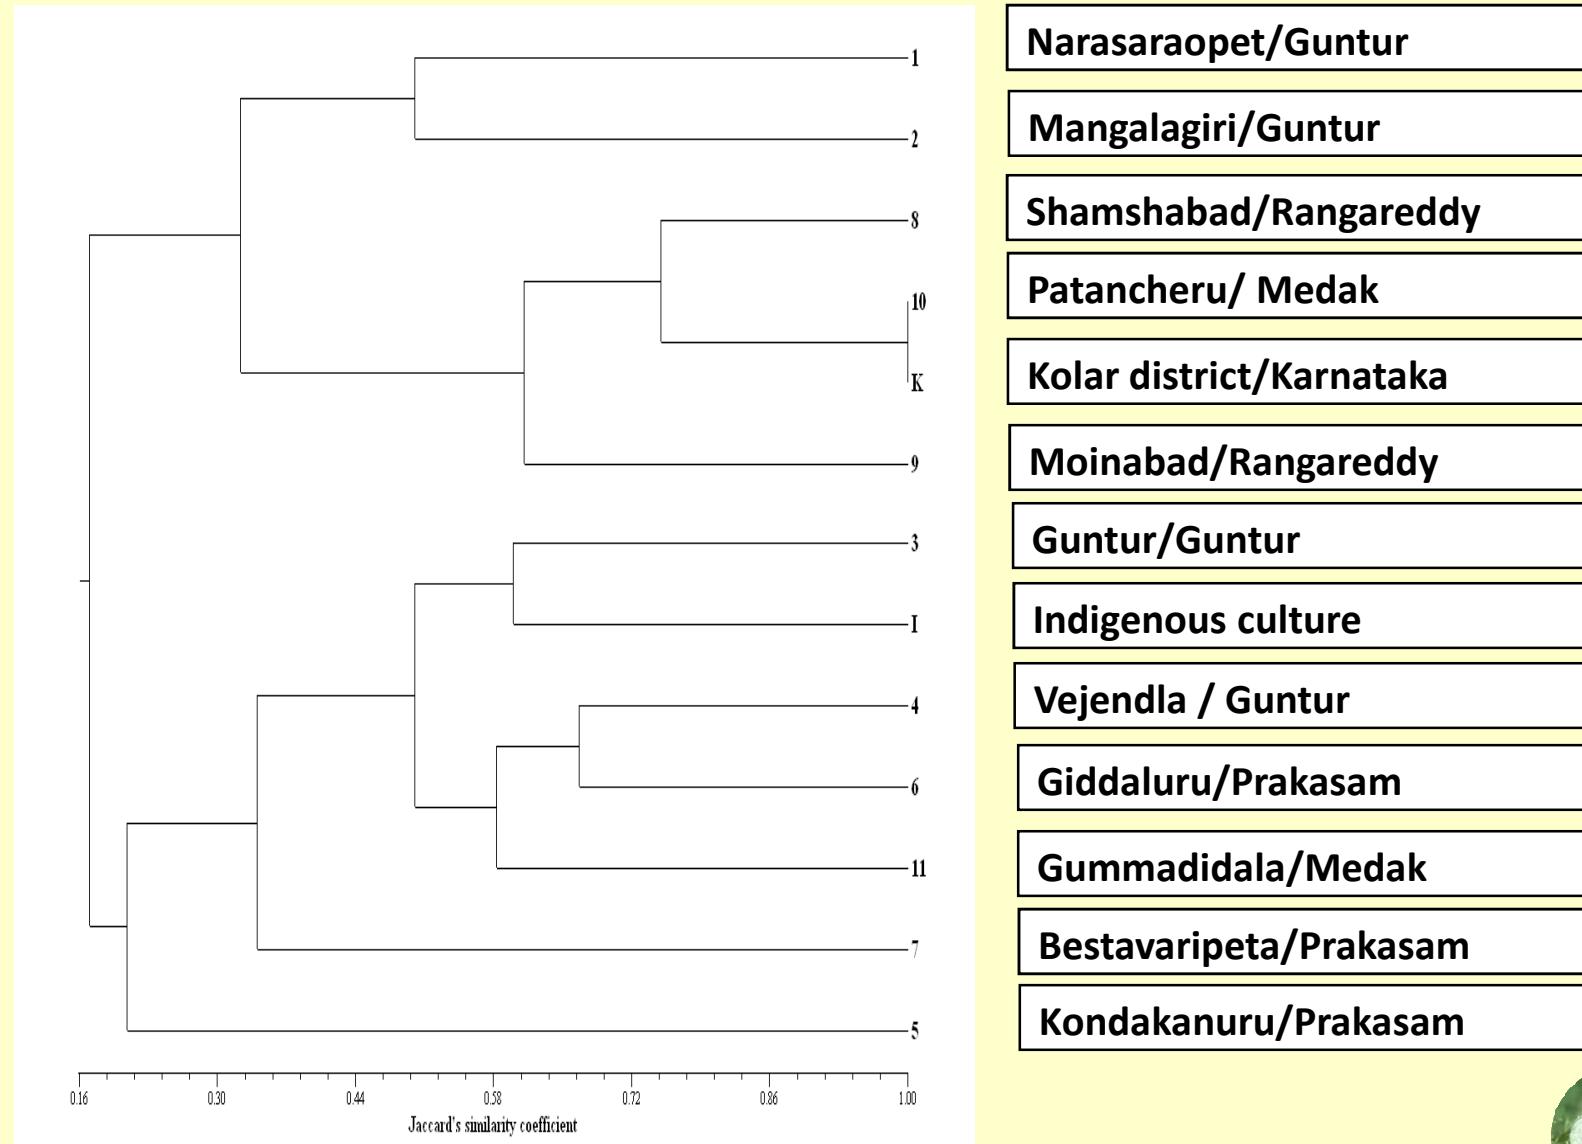

Lanes. M- Marker, I- Indigenous stock culture; W- Water control. K- Kolar district;

1- Narasaraopet, 2. Mangalagiri, 3. Guntur, 4. Vejendla 5. kondakanuru 6.Giddaluru 7. Besthavaripet

8..Shamshabad 9. Moyinabad; 10. Patancheruvu 11.Medak

Dendrogram showing the grouping of whitefly populations of A.P in comparison with biotype –B of Kolar district in Karnataka.

WHAT IS IPM?

Integrated Pest Management (IPM) is the coordinated use of pest and environmental information with available pest control methods to prevent unacceptable levels of pest damage by the most economical means and with the least possible hazard to people, property, and the environment (EPA definition). IPM is a sustainable approach to pest management that uses knowledge of pest, crop and environmental conditions to select the best combination of the following

IPM TACTICS:

Cultural control

modify farming practices to decrease pest problems

Biological control

use beneficial organisms to regulate pests

Chemical control

use chemical pesticides appropriately

Physical control

kill pests directly or by disrupting their environments

Guard crops

- 1.Tomato + Maize
- 2.Tomato + Jowar
- 3.Tomato + Bajra
- 4.Tomato + Brinjal
- 5.Tomato +Sunflower
- 6.Tomato + Redgram
- 7.Tomato sole

Mulches

- 1. White polythene sheet
- 2. Black polythene sheet
- 3. UV reflective mulch
- 4. Paddy straw mulch
- 5. Saw dust mulch
- 6. Paddy husk mulch
- 7. Control

Future Thrusts

- Regular Monitoring of the spread of B biotype *Bemisia tabaci* in other parts of Andhra Pradesh and Telangana
- Studies on biology, host range, alternate hosts, bio-control agents of whitefly B-biotype.
- IRM studies with different insecticides against Whitefly biotypes.
- Studies on genetic diversity in Indian whitefly population by molecular approaches.
- Identification of different virus strains involved in ToLCV on Tomato
- Development of IPM package against TOLCV through vector management by integrating all suitable methods.

Thanks
