3rd International Conference on
Biodiversity & Sustainable Energy Development
June 24–26, 2014 Valencia Conference Centre, Spain

OUTLINE

- WHAT IS ATMOSPHERIC PM AND WHY IT IS IMPORTANT?
- SOURCES OF PM
- INDOOR PM EXPERIMENT
- CONCLUSIONS

3rd International Conference on
Biodiversity & Sustainable Energy Development
June 24–26, 2014 Valencia Conference Centre, Spain

WHAT IS PM?

Airborne particulate matter (PM) – dust, dirt, soot, smoke, and liquid droplets suspended in the atmosphere

Particles

Formation processes
&
Subsequent reactions in
the atmosphere

- **Sizes**
- **Other physical** properties
- **Chemical** properties

3rd International Conference on
Biodiversity & Sustainable Energy Development
June 24–26, 2014 Valencia Conference Centre, Spain

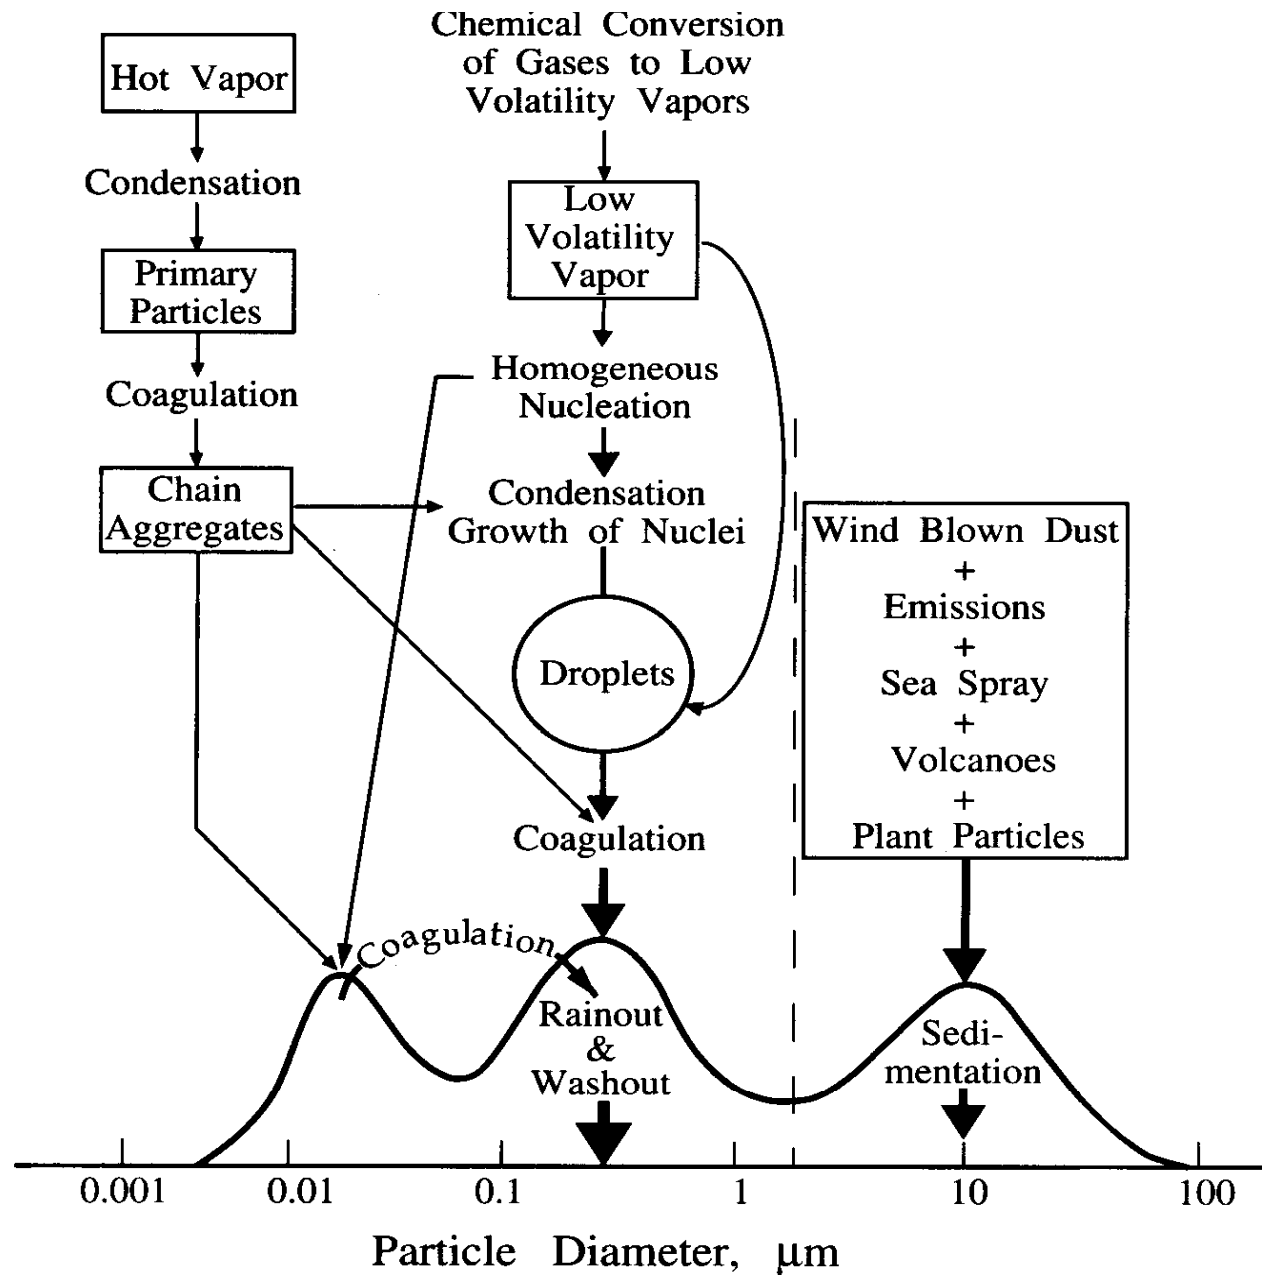

WHAT IS PM?

Formation processes
&
Subsequent reactions in
the atmosphere

~ few nm - $\approx 100 \mu\text{m}$
(the size of
molecular
clusters) (small
enough)

3rd International Conference on
Biodiversity & Sustainable Energy Development
June 24–26, 2014 Valencia Conference Centre, Spain

Mass distribution
(Whitby, 1978)

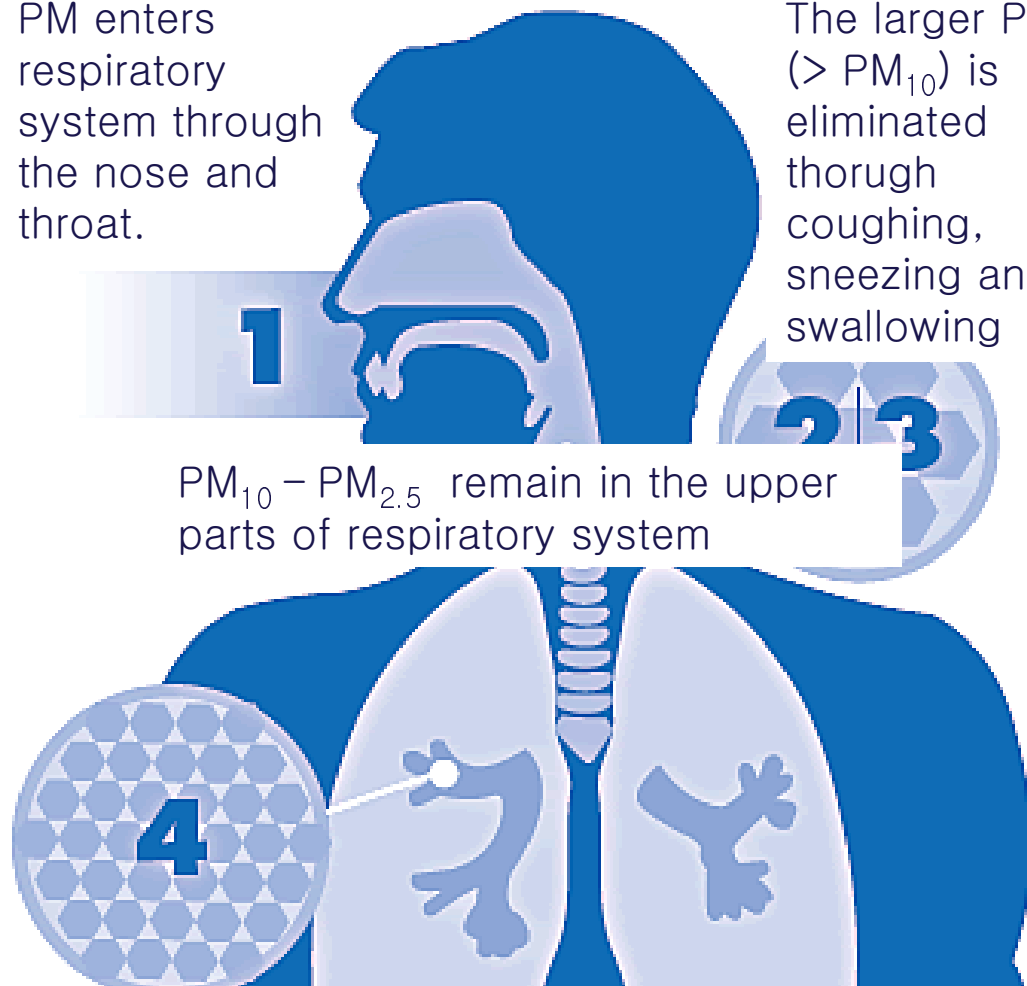

WHY IT IS IMPORTANT?

HUMAN HEALTH

PM enters respiratory system through the nose and throat.

The larger PM ($> PM_{10}$) is eliminated thorough coughing, sneezing and swallowing

PM_{10} - $PM_{2.5}$ remain in the upper parts of respiratory system

$PM_{2.5}$ can penetrate deep into the lungs. It can enter alveoli, causing lung and heart problems, and delivering harmful chemicals to the blood system.

INDOOR PM EXPERIMENT

12 November 2012 – 26 April 2013

Total of 229586 1-min mean data per each measured variable

Meteorological data

DustTrak™ Aerosol Monitor TSI, Inc., Shoreview, MN, USA

1-min mean mass concentrations at 1.7 m AGL

A – Model 8533:

PM1, PM2.5,
PM4, PM10, TSP

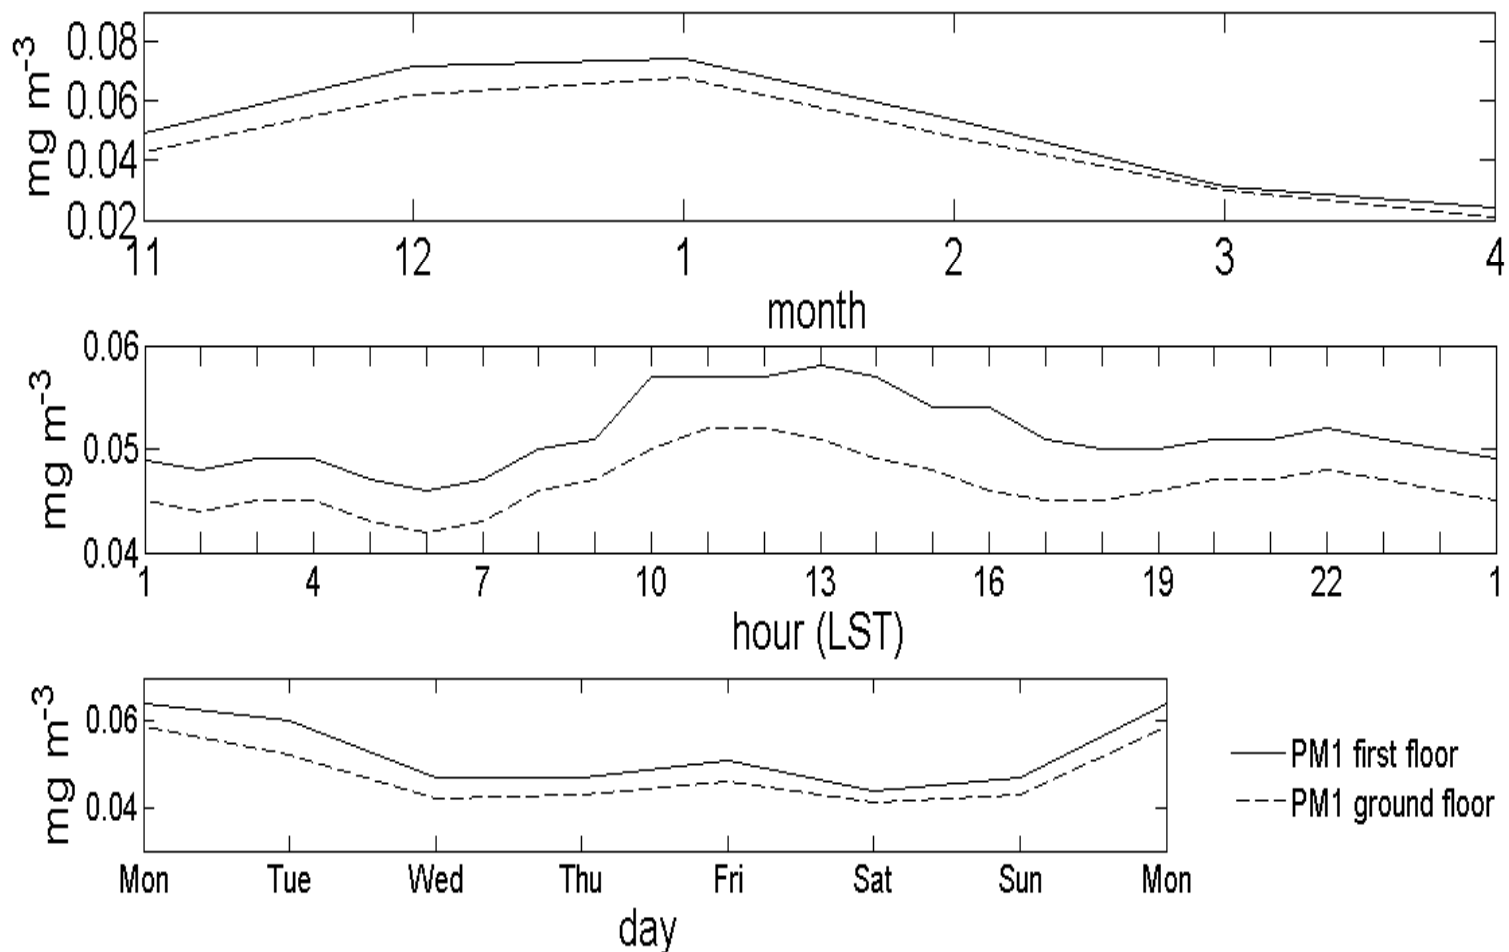

B – Model 8520:

PM1

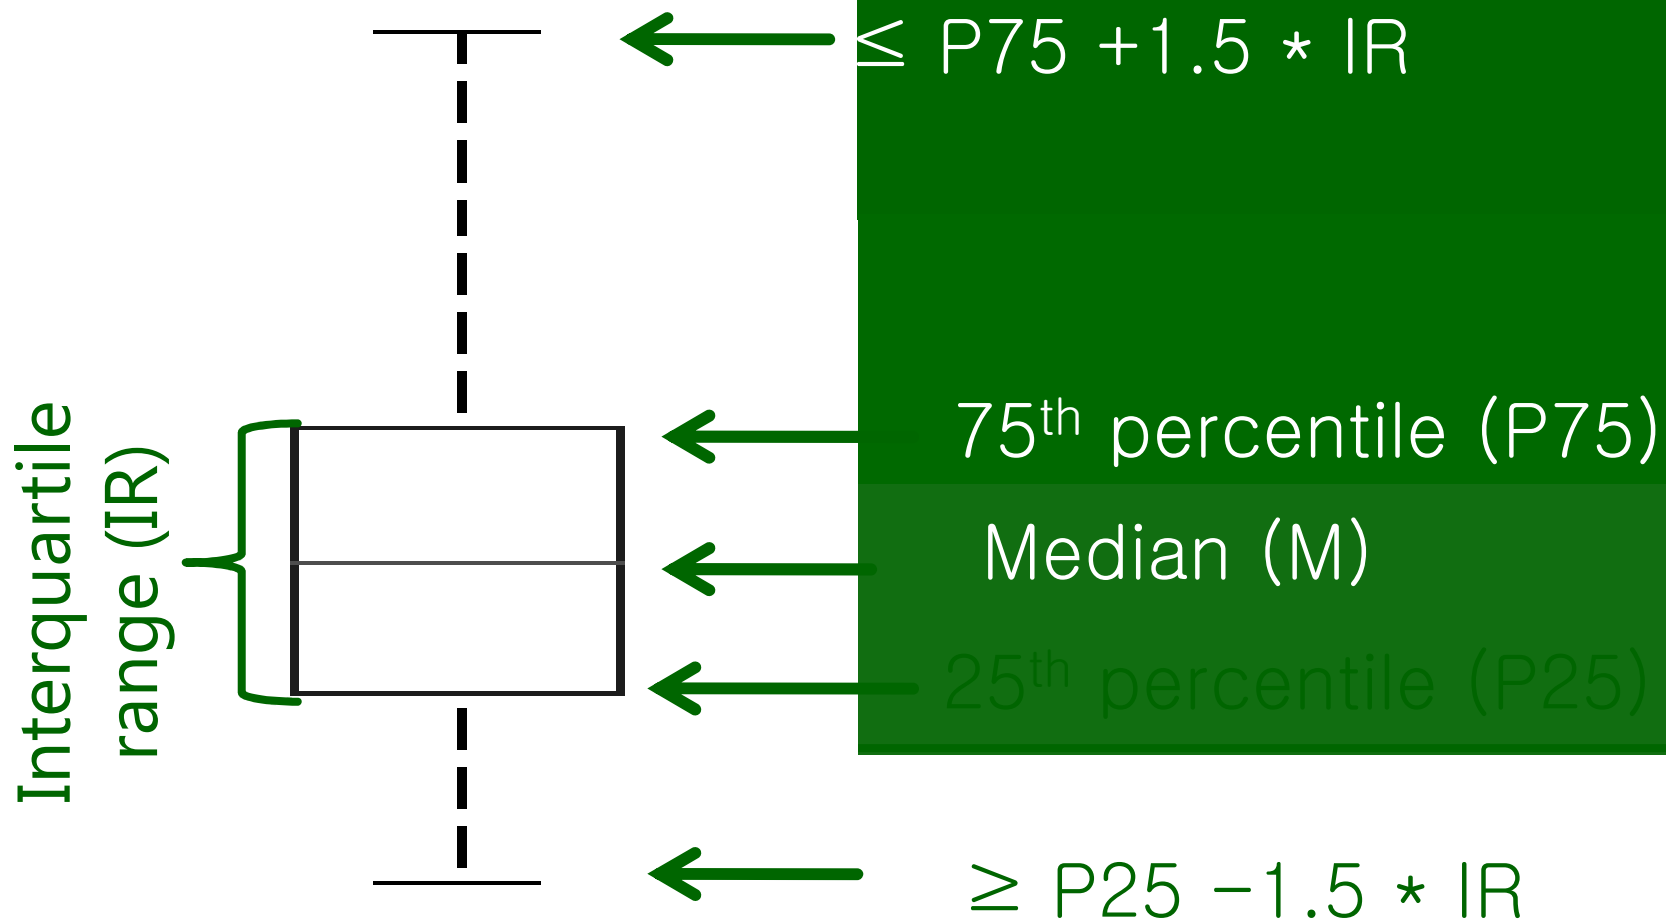

RESULTS (PM1)

Temporal variations

PM1 vs. meteorology

Spectra

long-term periodicity

cyclones

\approx diurnal

CONCLUSIONS

⇒ Wintertime indoor PM levels depend on the outdoor meteorological conditions

- [PM] increases with relative humidity, global radiation, and air pressure
- [PM] decreases with outdoor temperature, precipitation amount, and horizontal wind velocity

⇒ Indoor [PM] depends on the wind direction → signature of 8 – 9 km distant industrial zone

3rd International Conference on
Biodiversity & Sustainable Energy Development
June 24–26, 2014 Valencia Conference Centre, Spain

CONCLUSIONS

- ⇒ ground floor \neq 1st floor
(outdoor air vs. resuspension)
- ⇒ Expected 7-day periodicity (Mon & Sat) seen in simple statistics, but not confirmed by spectra
- ⇒ Periodicity of [PM] and meteorological variables: semidiurnal, diurnal, and long-term (\approx 11 and 21 days)
- ⇒ Long-term periodicity & Rossby waves?
- ⇒ PM spectra more complex than meteorological spectra

GRACIAS
