Microfluidics is the science of handling and controlling fluids, which deals with the flow of liquids inside micrometer sized channels and its usually ranges from microliters (10^-6) to Pico liters (10^-12), and its networks of channels vary with the dimensions from tens to hundreds of micrometers. This discipline takes its origins in the early 1990’s and has grown exponentially. Microfluidics is also considered both as a science and technology.

Conference Highlights:

- Microfluidics Research and Advances
- Nanofluidics Research
- Microfluidic Chip
