I'd like to extend a hearty welcome to every participant to the International Conference on Medical Imaging and Clinical Research. The main theme of the conference is *Medical Imaging for Improved Diagnosis and Treatment,* which is very relevant today as the healthcare is transiting from preventive and predictive to personalized medicine. It will be an exciting experience as the conference focusses on wide spectrum of topics of medical imaging. This conference also provides a platform for meeting experts from academics and industries who will be sharing their expertise in the respective fields.

The organizers have taken special interest to encourage young investigators through awards for best poster, best presentation etc. I hope during the conference the participants will get ample opportunity to exchange their research ideas, discuss with the peers in the field, and establish collaborations.

Medical Imaging & Treatment is an interesting area to study and work, as it gives opportunity to contribute for the betterment of the society. We're aiming to offer through this conference a stage for continuous improvement of our ability and skills. Before I close, I'd like to thank each of you for attending the conference and bringing your expertise to the gathering.

My hearty welcome and sincere thanks to one and all.
